*Handbook of Cosmic Hazards and Planetary Defense* Joseph N. Pelton, Firooz Allahdadi, 2015-04-27 Covers in a comprehensive fashion all aspects of cosmic hazards and possible strategies for contending with these threats through a comprehensive planetary defense strategy. This handbook brings together in a single reference work a rich blend of information about the various types of cosmic threats that are posed to human civilization by asteroids, comets, bolides, meteors, solar flares and coronal mass ejections, cosmic radiation and other types of threats that are only recently beginning to be understood and studied, such as investigation of the “cracks” in the protective shield provided by the Van Allen belts and the geomagnetosphere, of matter-antimatter collisions, orbital debris and radiological or biological contamination. Some areas that are addressed involve areas about which there is a good deal of information that has been collected for many decades by multiple space missions run by many different space agencies, observatories and scientific researchers. Other areas involving research and studies that have only recently gotten underway are discussed by some of the world’s foremost experts in each of these areas, who provide up-to-date and scientifically verifiable information. Although much of the work in these various areas have been conducted by space agencies, an expanding range of work is also being carried out by observatories, by universities and other research centers, and even by private foundations and professional organizations. The purpose of this work is thus several-fold: to include the latest information and most systematic research from around the world in a single reference work; to note where there are significant gaps in knowledge where new research, spacecraft, observatories, or other initiatives are needed to fill in critical missing information; and to give the best possible information about preventative actions that might be taken against cosmic threats and identify various alternative strategies that are now

under way or planned to cope with these various threats.

Defenders Al Ewing, Chip Zdarsky, Gerry Duggan, Jason Latour, 2019-03-13 Collecting Immortal Hulk: Defenders, Namor: Defenders, Doctor Strange: Defenders, Silver Surfer: Defenders And Defenders: The Best Defense. Doctor Strange! The Hulk! Namor, the Sub-Mariner! The Silver Surfer! An unsolvable murder. An aquatic doorway to nothingness. A wanderer at the end of time. And a cosmic train of planetary proportions. Four seemingly unrelated events that will require the powers and insights of the greatest non-team of all. Only they can connect the dots and challenge the strange power behind these disconnected happenings before all of reality pays the price! But Doctor Strange is dead? Namor has declared war on the surface world! The Surfer once more serves Galactus! And the Hulk is Immortal! Estranged and distressed, can these former allies come together in time to stave off a crisis of cosmic proportions? Don't call them a team — call them the Defenders!

### The Redeemed Good Defense Anthony

MacPherson, 2021-07-06 Why God? Everyday this question is uttered in sorrow, bewilderment, or anger. This cry is the problem of suffering. It is also known as the problem of evil. It asks why a good, all-powerful God allows evil and pain. Theodicy is the name of the theological responses that seek to defend God against charges of unfairness. Traditional theodicies have been accused of intensifying the problem by claiming that God is justified in allowing evil because he uses it to bring about a greater good. This greater-good approach has been criticized in more recent times. It seems to uncomfortably align God and evil too closely together. Does God need evil in order to bring good? This study explores an alternative stream of theodicy found in the idea of cosmic warfare. In this theodicy God fights evil in its moral, physical, spiritual, and supernatural forms. This book explores the world of theodicy and its cosmic warfare forms. It navigates the theological and ethical minefields involved. Building

on the idea that God is in the midst of a great cosmic controversy, it seeks to further the conversation and articulates a new alternative redeemed good defense.

**Ragnaroc Inc: Embrace Oblivion** Jason K.

Garrett, 2022-08-24 Attack or defend? It's pretty simple to General Michael Thunderstarr. After billions of years, the Earth is simply going to fizzle out on it's own? No way, if his brother John's math is right( and it always is) they've got 7 years left before a second big bang arrives on Earth. But Michael doesn't believe it's a random act but more the actions of a malevolent space god worshipped by many as DeGama. If that's the case, why wait, lower the Earth's cosmic defense and attack now to save the planet before DeGama can strike! The space-time bending company, Ragnaroc Inc has been placed in charge of not only the cosmic defense of Earth but finding a solution to the 2nd big bang as well. Lowering the defenses to do ANYTHING is too risky. But Michael has a plan to gain the ultimate power and attack the mad space god head on! But will it be enough? Collects the original issues of Ragnaroc Inc: Embrace Oblivion #1-8.

*Planetary Defense* Nikola Schmidt, 2018-12-26 Planetary defense from near-Earth objects such as asteroids is a far more nuanced and challenging topic than it might seem. Each day, technology is making it easier to detect asteroid impact threats in advance, but at present, there is still no easy way to design and implement any form of global defense. This book examines how various asteroid deflection methods can change global political affairs. The authors believe that the final policy for potential Earth impacts should be based on practical engineering solutions and innovative architectural structures, while at the same time reflecting the most recent political science contributions in ethical security studies and security cosmopolitanism. Their focus is not limited to effective engineering solutions, but rather extends to how such proposals resonate in possible political structures of the future. Planetary defense cannot be achieved

with technology alone; the chapters in this volume highlight the issues that arise when space science and technology intersect with political science. This complex interdisciplinary project not only demands global participation and collaboration, but also proposes the way we can achieve it. The authors explore various concepts of governance and their far-reaching implications for planetary defense and vice versa—how scientific progress in Solar System observations and asteroid collision engineering influence political science and put pressure on the international legal framework. The text is intentionally written for a diverse scholarly and diplomatic audience in a style accessible to non-specialists and practitioners and can be read by those across diverse disciplinary backgrounds.

**Fire in the Sky** Gordon L. Dillow, 2020-08-04 This “accessible and always entertaining” (Booklist) combination of history, pop science, and in-depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now, as well as how prepared we are against asteroid-caused catastrophe. One of these days, warns Gordon Dillow, the Earth will be hit by a comet or asteroid of potentially catastrophic size. The only question is when. In the meantime, we need to get much better at finding objects hurtling our way, and if they’re large enough to penetrate the atmosphere without burning up, figure out what to do about them. We owe many of science’s most important discoveries to the famed Meteor Crater, a mile-wide dimple on the Colorado Plateau created by an asteroid hit 50,000 years ago. In his masterfully researched *Fire in the Sky*, Dillow unpacks what the Crater has to tell us. Prior to the early 1900s, the world believed that all craters—on the Earth and Moon—were formed by volcanic activity. Not so. The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs, and it has opened up a new field of asteroid observation that is brimming with urgency. Dillow looks at great

asteroid hits of the past and modern-day asteroid hunters and defense planning experts, including America's first Planetary Defense Officer. Satellite sensors confirm that a Hiroshima-scale blast occurs in the atmosphere every year, and a smaller, one-kiloton blast every month. While Dillow makes clear that the objects above can be deadly, he consistently inspires awe with his descriptions of their size, makeup, and origins. Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead, *Fire in the Sky* is, ultimately, a testament to our universe's celestial wonders.
