Offshore Wind Energy Finn Gunnar Nielsen, 2024-02-29 Many countries have plans to expand wind energy to meet CO2 emissions targets. Lack of available land area and the need for good and stable wind conditions have stimulated the development of offshore wind turbines, which allows for the development of larger turbines. The offshore environment, however, involves new challenges related to the design, installation, operation and maintenance of the turbines. Based on a graduate-level course taught by the author, this book focuses on the opportunities and challenges related to offshore wind turbines. It introduces the offshore environment, including wind and wave dynamics, before discussing the aerodynamics of wind turbines, hydrodynamic loading, marine operations, and wind farm layout. Featuring examples that demonstrate practical application of the topics covered and exercises to consolidate student understanding, this is an indispensable reference text for advanced students and researchers of environmental science and engineering and for industry professionals working in the wind energy sector.

A Pompeian Herbal Wilhelmina Feemster Jashemski, 2014-12-15. When workmen excavating the ruins of Pompeii eagerly gathered the native medicinal plants growing there, Wilhelmina Jashemski discovered that this was another example of the continuity of life in the shadow of Vesuvius. Many of the plants used for herbal medicine around Pompeii today are the same ones that ancient authorities such as Pliny the Elder and Dioscorides recommended for treating the same types of disorders. In this book, Jashemski presents an herbal of thirty-six medicinal plants, most of them known to the ancients and still employed today. She describes each plant's contemporary medicinal uses and compares them to ancient practices as recorded in literary sources. Scientific, English, and Italian names and the plant's mythological associations complete the entries, while elegant, full-page portraits depict

each plant visually.

Healing Dream and Ritual C. A. Meier, 2003-06 C. A. Meier investigates the ancient Greek understanding of dreams and dreaming, Antique incubation and concomitant rituals. In this greatly expanded version of his classic work, *Ancient Incubation and Modern Psychotherapy* Meier compares Asklepiian divine medicine with our own contemporary psychotherapeutic approaches to dreaming. He elucidates how the healing cure was found in the very core of illness itself -- a fact of invaluable significance today in both medicine and psychology. In helping us to recognise the suprapersonal aspects of illness, the dream is shown to reveal a transcendental path to healing.

Ecological Systems Rik Leemans, 2012-12-12 Earth is home to an estimated 8 million animal species, 600,000 fungi, 300,000 plants, and an undetermined number of microbial species. Of these animal, fungal, and plant species, an estimated 75% have yet to be identified. Moreover, the interactions between these species and their physical environment are known to an even lesser degree. At the same time, the earth's biota faces the prospect of climate change, which may manifest slowly or extremely rapidly, as well as a human population set to grow by two billion by 2045 from the current seven billion. Given these major ecological changes, we cannot wait for a complete biota data set before assessing, planning, and acting to preserve the ecological balance of the earth. This book provides comprehensive coverage of the scientific and engineering basis of the systems ecology of the earth in 15 detailed, peer-reviewed entries written for a broad audience of undergraduate and graduate students as well as practicing professionals in government, academia, and industry. The methodology presented aims at identifying key interactions and environmental effects, and enabling a systems-level understanding even with our present state of factual knowledge.
