The Crumple Zone Buddy Thomas,2001 This hilarious Off-Broadway hit, set in a run-down apartment on Staten Island, concerns three gay roommates coming to a crisis during one frantic Christmas weekend.

Executive Crumple Zone Michael A. Sisti,2009-10-01 Told in a series of e-mails, this spirited novel, follows the adventures of high-energy entrepreneur Dave Powers. When he becomes head of marketing in a large health insurance company, he has no idea that he's in store for the roller-coaster ride of his life. Used to operating independently, he's shocked by the twists and turns of office politics and departmental turf wars, and the behind-the-scenes shenanigans of narcissistic bosses and groveling sycophants. A cautionary tale filled with laughter and despair, the novel entertains while documenting the accomplishments and frustrations of a creative outsider. Dave's roughshod ride through the corridors of corporate bureaucracy is as hilarious as it is heart-breaking. His story of creative triumphs, managerial incompetence and exasperating fiascos is an object lesson of the realities of power, greed, folly and success in today's dysfunctional business world.

Dupuytren's Disease Alfred Berger,Axel Delbrück,Peter Brenner,Rolf Hinzmann,2012-12-06 In this volume a distinguished group of internationally renowned clinicians and basic researchers discuss the present state of knowledge of the etiologyand pathogenesis of Dupuytren's contracture, a disease responsible for a considerable portion of disabilities within the working population allover the world. Although the riddle of how the contracture of the palmar fascia develops is still unsolved, the data on the pathobiochemistry and clinic of Dupuytren's Disease achieved in recent years has led to a better understanding of the biochemical and morphological processes underlying the deformation and malfunction of the afflicted tissues. Research in Dupuytren's Disease now enters the era of molecular medicine, which opens up new experimental means of studying the pathological changes which occur during the formation of the contracture on a molecular level. In particular, data are presented as to the role of specific biological macromolecules influencing the phenotype expression of the palmar fascia cells which are involved in autoimmune reactions and present both at the cell surface as well as in the extracellular matrix to regulate cell-to-

cell and cell-to-matrix interactions. In vitro cell culture models to investigate fibro-cytic modulations are available and have been applied to study the effects of specific biological molecules on isolated cells from healthy palmar fascia and Dupuytren's contracture. Complementary evaluations of morphological, epidemiological, and clinical data contribute essentially to the present understanding of the etiology and pathogenesis of Dupuytren's Disease. This comprehensive and informative summary of the state of the art is completed by numerous references affixed to the individual contributions.

Crashworthiness of Composite Thin-Walled Structures A.G. Mamalis,D. E. Manolakos,G. A. Demosthenous,M. B. Ioannidis,1998-08-18 FROM THE INTRODUCTION Vehicle crashworthiness has been improving in recent years with attention mainly directed towards reducing the impact of the crash on the passengers. Effort has been spent in experimental research and in establishing safe theoretical design criteria on the mechanics of crumpling, providing to the engineers the ability to design vehicle structures so that the maximum amount of energy will dissipate while the material surrounding the passenger compartment is deformed, thus protecting the people inside. During the last decade the attention given to crashworthiness and crash energy management has been centered on composite structures. The main advantages of fibre reinforced composite materials over more conventional isotropic materials, are the very high specific strengths and specific stiffness which can be achieved. Moreover, with composites, the designer can vary the type of fibre, matrix and fibre orientation to produce composites with proved material properties. Besides the perspective of reduced weight, design flexibility and low fabrication costs, composite materials offer a considerable potential for lightweight energy absorbing structures; these facts attract the attention of the automotive and aircraft industry owing to the increased use of composite materials in various applications, such as frame rails used in the apron construction of a car body and the subfloor of an aircraft, replacing the conventional materials used. Our monograph is intended to provide an introduction to this relatively new topic of structural crashworthiness for professional engineers. It will introduce them to terms and concepts of it and acquaint them with some sources of literature about it. We believe that our survey constitutes a reasonably well-balanced synopsis of the topic.

Spy, 1995-03 Smart. Funny. Fearless. It's pretty safe to say that Spy was the most influential magazine of the 1980s. It might have remade New York's cultural landscape; it definitely changed the whole tone of magazine journalism. It was cruel, brilliant, beautifully written and perfectly designed, and feared by all. There's no magazine I know of that's so continually referenced, held up as a benchmark, and whose demise is so lamented --Dave Eggers. It's a piece of garbage --Donald Trump.

Human Biomechanics and Injury Prevention J. Kajzer, E. Tanaka, H. Yamada, 2013-04-17 Human biomechanics is an important research field in achieving safety, health, comfort, and a high quality of life in a world where the older generation soon will outnumber the younger generation. Recently there have been significant developments in this new field of research, addressing such issues as injury prevention in various types of accidents, the causes of human bodily dysfunction, function recovery through medical care and training, and functional reinforcement by sports. These issues are studied on the basis of the biomechanics of the cells, tissues, organs, and systems of the human body. To achieve the aim of providing support for better lives from the aspect of mechanical engineering, the Human Life Support Biomechanics Endowed Chair at the Graduate School of Engineering at Nagoya University was established more than 3 years ago with a donation from the Toyota Motor Corporation. Since that time, we have been conducting intensive research in the field as well as trying to publicize our work in Japan. The results of our research have been presented at conferences both at home and abroad. We have also endeavored to underscore the importance of the field by organizing symposiums with carefully designed programs.
