**The Biology of Caves and Other Subterranean Habitats** David C. Culver, Tanja

Pipan, 2019-04-01 The second edition of this widely cited textbook continues to provide a concise but comprehensive introduction to cave and subterranean biology, describing this fascinating habitat and its biodiversity. It covers a range of biological processes including ecosystem function, evolution and adaptation, community ecology, biogeography, and conservation. The authors draw on a global range of examples and case studies from both caves and non-cave subterranean habitats. One of the barriers to the study of subterranean biology has been the extraordinarily large number of specialized terms used by researchers; the authors explain these terms clearly and minimize the number that they use. This new edition retains the same 10 chapter structure of the original, but the content has been thoroughly revised and updated throughout to reflect the huge increase in publications concerning subterranean biology over the last decade.

*Caves* David Shaw Gillieson, 2021-06-09 People have been interested in caves for a very long time. Our distant ancestors used them for shelter, as sources of water, and as places in which to conduct essential rituals. They adorned their walls with quite sophisticated artwork depicting both their existential and spiritual concerns. Caves feature in our mythology, they are used as places of worship in many cultures, and they are used throughout the world as places in which to store prized foodstuffs and wine. For at least two hundred years they have attracted scientists, artists, photographers, and recreational cavers. This book aims examines how caves form, the light they shed on past environments and climates, and the values, both environmental and cultural, that they provide to humanity. This second edition of *Caves: Processes, Development, and Management* is a welcome revision of the author's earlier treatment released over twenty years ago. It has been updated, significantly expanded, and largely rewritten. The intervening years have seen a dramatic increase in karst and cave research globally, with significant advances in our understanding of fundamental processes, in our ability to extract proxy climatic and environmental data from cave deposits, and in our understanding of the breadth of cave values and as a result the complexity of their management needs. This new edition adopts a broad international perspective in the research examples used and the cited literature, and has actively sought out material from the tropical world and the southern continents, thus avoiding the European and North American bias frequently found in speleological publications. *Caves: Processes, Development, and Management, Second Edition*, is organised into four sections. In the first section, contemporary processes of cave formation are examined. The second section of the book deals with past processes and their physical manifestation. In the third section, the use of caves by various organisms from bacteria to humans is

explored. The final section of the book reviews our changing approaches to cave management and to catchment management on karst terrains. The book will be of use to anyone who is interested in caves and karst, or who wants to understand about cave formation, development, values and management.

*Scribes and Scrolls at Qumran* Sidnie White Crawford,2019-07-02 The discovery of the Dead Sea Scrolls altered our understanding of the development of the biblical text, the history and literature of Second Temple Judaism, and the thought of the early Christian community. Questions continue to surround the relationship between the caves in which the scrolls were found and the nearby settlement at Khirbet Qumran. In *Scribes and Scrolls at Qumran*, Sidnie White Crawford combines the conclusions of the first generation of scrolls scholars that have withstood the test of time, new insights that have emerged since the complete publication of the scrolls corpus, and the much more complete archaeological picture that we now have of Khirbet Qumran. She creates a new synthesis of text and archaeology that yields a convincing history of and purpose for the Qumran settlement and its associated caves.

Cave Biodiversity J. Judson Wynne, 2022-11-15 A deep-dive into the evolutionary biology, biogeography, and conservation of the most elusive subterranean creatures in the world. Far from the austere, sparsely populated ecosystems often conjured in the imagination, caves host some of the most mysterious and biodiverse natural systems in the world. Subterranean environments, however, are the least explored terrestrial habitats, contributing to misconceptions about their inhabitants. Edited by cave scientist and conservation ecologist Dr. J. Judson Wynne, *Cave Biodiversity* explores both the evolution and the conservation of subterrestrial-dwelling fauna. Covering both vertebrates and invertebrates, including mollusks, fishes, amphibians, arthropods, and other troglobionts, this volume brings together ichthyologists, entomologists, ecologists, herpetologists, and conservationists to provide a nuanced picture of life beneath the earth's surface. Broad chapters covering biotic and abiotic factors that influence evolution and support biodiversity precede chapters dedicated to specific taxa, highlighting phylogenetics and morphology, and delving into zoogeography, habitat, ecology, and dispersal mechanisms for each. Considerations for conservation of these fascinating, often bizarre, and often highly sensitive subterranean creatures are emphasized throughout. *Cave Biodiversity* aims to synthesize the principles of subterranean evolutionary biology and diversity through in-depth case studies of some of the most captivating and imperiled taxonomic groups in the world. Employing a multidisciplinary approach involving systematics, genetics, ecology, biogeography, evolutionary biology, and conservation science, *Cave Biodiversity* will be of keen interest to evolutionary biologists, ecologists, conservation biologists, and cave scientists, as well as advanced undergraduate and graduate students. Contributors: Maria E. Bichuette, Evin T. Carter, Prosanta Chakrabarty, Kenneth James Chapin, Danté B. Fenolio, Andrew G. Gluesenkamp, Jozef Grego, Francis G. Howarth, Leonardo Latella, Matthew L. **The Cabaret of Plants** Richard Mabey,2015-10-22 In The Cabaret of Plants, Mabey explores the plant species which have challenged our imaginations, awoken our wonder, and upturned our ideas about history, science, beauty and belief. Picked from every walk of life, they encompass crops, weeds, medicines, religious gathering-places and a water lily named after a queen. Beginning with

pagan cults and creation myths, the cultural significance of plants has burst upwards, sprouting into forms as diverse as the panacea (the cure-all plant ginseng, a single root of which can cost up to \$10,000), Newton's apple, the African 'vegetable elephant' or baobab - and the mystical, night-flowering Amazonian cactus, the moonflower. Ranging widely across science, art and cultural history, poetry and personal experience, Mabey puts plants centre stage, and reveals a true botanical cabaret, a world of tricksters, shape-shifters and inspired problem-solvers, as well as an enthralled audience of romantics, eccentric amateur scientists and transgressive artists. The Cabaret of Plants celebrates the idea that plants are not simply 'the furniture of the planet', but vital, inventive, individual beings worthy of respect - and that to understand this may be the best way of preserving life together on Earth.

### **The Cabaret of Plants: Forty Thousand Years of Plant Life and the Human Imagination**

Richard Mabey, 2016-01-11 Highly entertaining...Mabey gets us to look at life from the plants' point of view. —Constance Casey, New York Times The Cabaret of Plants is a masterful, globe-trotting exploration of the relationship between humans and the kingdom of plants by the renowned naturalist Richard Mabey. A rich, sweeping, and wonderfully readable work of botanical history, The Cabaret of Plants explores dozens of plant species that for millennia have challenged our imaginations, awoken our wonder, and upturned our ideas about history, science, beauty, and belief. Going back to the beginnings of human history, Mabey shows how flowers, trees, and plants have been central to human experience not just as sources of food and medicine but as objects of worship, actors in creation myths, and symbols of war and peace, life and death. Writing in a celebrated style that the Economist calls "delightful and casually learned," Mabey takes readers from the Himalayas to Madagascar to the Amazon to our own backyards. He ranges through the work of writers, artists,

and scientists such as da Vinci, Keats, Darwin, and van Gogh and across nearly 40,000 years of human history: Ice Age images of plant life in ancient cave art and the earliest representations of the Garden of Eden; Newton's apple and gravity, Priestley's sprig of mint and photosynthesis, and Wordsworth's daffodils; the history of cultivated plants such as maize, ginseng, and cotton; and the ways the sturdy oak became the symbol of British nationhood and the giant sequoia came to epitomize the spirit of America. Complemented by dozens of full-color illustrations, *The Cabaret of Plants* is the magnum opus of a great naturalist and an extraordinary exploration of the deeply intertwined history of humans and the natural world.
