**Ferroelectric Materials and Ferroelectricity** T. F. Connolly, 2013-11-11 This volume is a joint effort of the Research Materials Information Center (RMIC) of the Solid State Division at Oak Ridge National Laboratory and the Libraries and Information Systems Center at Bell Telephone Laboratories (BTL) Murray Hill, N. J. The Research Materials Information Center has, since 1963, been answering inquiries on the avail ability, preparation, and properties of inorganic solid-state research materials. The preparation of bibliographies has been essential to this function, and the interest in ferroelectrics led to the compila tion of the journal and report literature on that subject. The 1962 book Ferroelectric Crystals, by Jona and Shirane, was taken as a cutoff point, and all papers through mid-1969 received by the Center have been included. The Libraries and Information Systems

Center of BTL has, over a period of years, developed a proprietary package of computer programs called BELDEX, which formats and generates indexes to bibliographic material. This group therefore undertook to process RMIC's ferroelectric references by BELDEX so that both laboratories could have the benefit of an indexed basic bibliography in this important research area.

*"Architecture and Pilgrimage, 1000-1500"* Deborah Howard, 2017-07-05 Although there is an obvious association between pilgrimage and place, relatively little research has centred directly on the role of architecture. *Architecture and Pilgrimage, 1000-1500: Southern Europe and Beyond* synthesizes the work of a distinguished international group of scholars. It takes a broad view of architecture, to include cities, routes, ritual topographies and human interaction with the natural environment, as well as specific buildings and shrines, and considers how these were perceived, represented and remembered. The essays explore both the ways in which the physical embodiment of pilgrimage cultures is shared, and what we can learn from the differences. The chosen period reflects the flowering of medieval and early modern pilgrimage. The perspective is that

of the pilgrim journeying within - or embarking from - Southern Europe, with a particular emphasis on Italy. The book pursues the connections between pilgrimage and architecture through the investigation of such issues as theology, liturgy, patronage, miracles and healing, relics, and individual and communal memory. Moreover, it explores how pilgrimage may be regarded on various levels, from a physical journey towards a holy site to a more symbolic and internalized idea of pilgrimage of the soul.

*Silicon Wet Bulk Micromachining for MEMS* Prem Pal, Kazuo Sato, 2017-04-07 Microelectromechanical systems (MEMS)-based sensors and actuators have become remarkably popular in the past few decades. Rapid advances have taken place in terms of both technologies and techniques of fabrication of MEMS structures. Wet chemical-based silicon bulk micromachining continues to be a widely used technique for the fabrication of microstructures used in MEMS devices. Researchers all over the world have contributed significantly to the advancement of wet chemical-based micromachining,

from understanding the etching mechanism to exploring its application to the fabrication of simple to complex MEMS structures. In addition to its various benefits, one of the unique features of wet chemical-based bulk micromachining is the ability to fabricate slanted sidewalls, such as 45° walls as micromirrors, as well as freestanding structures, such as cantilevers and diaphragms. This makes wet bulk micromachining necessary for the fabrication of structures for myriad applications. This book provides a comprehensive understating of wet bulk micromachining for the fabrication of simple to advanced microstructures for various applications in MEMS. It includes introductory to advanced concepts and covers research on basic and advanced topics on wet chemical-based silicon bulk micromachining. The book thus serves as an introductory textbook for undergraduate- and graduate-level students of physics, chemistry, electrical and electronic engineering, materials science, and engineering, as well as a comprehensive reference for researchers working or aspiring to work in the area of MEMS and for engineers working in microfabrication technology.

*Icons Unmasked* Alex Solis, 2016-02-14 Ever wonder if the characters you see on TV, in movies and in comic books are hiding something behind their masks? That perhaps they're really someone -- or something -- else? When pop culture is such a huge part of our lives, we're bombarded with these characters everywhere we turn. Each time we see a new character in a movie, video game or commercial, we feel a sudden sense *deja vu*. There's something about their goofy grin, that creepy laugh, or those boogly eyes that feels eerily familiar...This got me thinking. Is anything we see ever 100% original? Or is everything we experience really just our minds piecing together past experiences to create

something that feels unique and new? In Icons Unmasked, I'm trying to bring a new sense of discovery to characters everyone has seen hundreds of times. I wanted to recreate the experience of what it might be like to see one iconic character from your childhood for the first time as an adult. Proceed at your own caution and keep in mind the following illustrations cannot be unseen. Your childhood might possibly be destroyed forever
