Challenge of Chemical Weapons Victor A.

Utgoff,1990-06-18 This book traces through a 100+ year history of evolving chemical weapons technology, public attitudes toward these weapons, attempts to negotiate controls on them, and important instances in which nations chose to use or forego the use of chemical weapons.

'Non-Lethal' Weapons N. Davison,2009-06-17 This book provides an up-to-date analysis of the development and deployment of 'non-lethal' weapons by police and military organizations. It reviews the key technologies, issues, and dangers, with particular attention to the development of drugs, lasers, microwaves, and acoustics as incapacitating weapons.

A History of Chemical and Biological Weapons

Edward M. Spiers,2010-04-30 Following the 9/11 attacks and the anthrax letters that appeared in their wake, the threat posed by the widespread accessibility of chemical and biological weapons has continually been used to stir public fear and opinion by politicians and the media alike. In *Chemical and Biological Weapons*, Edward M. Spiers cuts through the scare tactics and hype to provide a thorough and even-handed examination of the weapons themselves—the various types and effects—and their evolution from World War I to the present. Spiers describes the similarities and differences between the two types of weapons and how technological advancements have led to tactical innovations in their use over time. As well, he gives equal attention to the international response to the proliferation of chemical and biological weapons, analyzing global efforts aimed at restraining their use, such as deterrence and disarmament, and the effectiveness of these approaches in the twentieth century. Using Iraq as a case study, Spiers also investigates its deployment of

chemical weapons in the Iran-Iraq War and the attempts by the international community to disarm Iraq through the United Nations Special Commission and the United States-led war in 2003. A timely and balanced historical survey, *Chemical and Biological Weapons* will be of interest to readers studying the proliferation and use of chemical and biological warfare and the reactions of the international community throughout the last several decades.

Nuclear Weapons Joseph Rotblat, 2021-11-28 This volume of essays, a map of the road to zero, gives the reader a primer on the current state of nuclear disarmament, provides an up-to-date argument for the merits of a nuclear-weapon-free world, and outlines the steps needed to attain that goal. Its editor is Joseph Rotblat, the 1995 Nobel Peace Prize winner. The volume assesses recent efforts by scholars, military leaders, and political figures in advocating the elimination of nuclear weapons. It brings to focus the major dilemmas of disarmament, including verification, nuclear theft, and diplomatic and security issues; and argues for why these obstacles must be overcome. Finally, a comprehensive review of the steps needed to achieve a nuclear-weapon-free world is presented. }Over the past decade the concept of a world free of all nuclear weapons has transformed from a fanciful dream to a subject of serious study and action. Will it be possible for the international community to agree not simply to reduce the number of nuclear weapons to low levels, but to reduce it to zero? This volume of essays, a map of the road to zero, gives the reader a primer on the current state of nuclear disarmament, provides an up-to-date argument for the merits of a nuclear-weapon-free world, and outlines the steps needed to attain that goal. Its editor is Joseph Rotblat, the 1995 Nobel Peace Prize winner. The volume assesses recent efforts by scholars, military

leaders, and political figures to advocate the elimination of nuclear weapons. It brings to focus the major dilemmas of disarmament, including verification, nuclear theft, and diplomatic and security issues; and argues for why these obstacles must be overcome. Finally, a comprehensive review of the steps needed to achieve a nuclear-weapon-free world is presented.

Incapacitating Biochemical Weapons Alan M. Pearson,Marie Isabelle Chevrier,Mark Wheelis,2007 Incapacitating Biochemical Weapons examines the promise and peril behind weapons based on natural or synthetic biochemical compounds meant to cause rapid incapacitation but not death. An agent has yet to be found that can effectively incapacitate people without risk of death, but revolutionary advances coupled with the changing nature of conflict and warfare has generated renewed government interest. The authors provide a comprehensive survey of the issues associated with their development and use, and explore a wide range of issues, from science, to history, to current military interest, arms control, and international law. Incapacitating Biochemical Weapons: Promise or Peril? will be of interest to all who are concerned about the proliferation of such weapons.

Non-lethal Weapons as Legitimising Forces? Brian Rappert,2004-11-23 As mankind finds ever more impious ways to kill and maim, some look to non-lethal weapons as a fix. Brian Rappert discusses the technologies involved and the ethics of, for example blinding someone with a laser, leaving them blind forever, versus killing them outright.

The Future of Non-lethal Weapons Nick Lower,2017-09-29 These essays explore the increase in interest in non-lethal weapons. Such devices have meant that many armed forces and law enforcement agencies are able to act against undesirables without being accused of acting in an inhumane way. Topics for discussion in this volume include: an overview of the future of non-lethal weapons; emerging non-lethal technologies; military and police operational deployment of non-lethal weapons; a scientific evaluation of the effectiveness of non-lethal

weapons; changes in international law needed to take into account non-lethal technologies; developments in genomics leading to new chemical incapacitants; implications for arms control and proliferation; the role of non-lethal weapons in human rights abuses; conceptual, theoretical and analytical perspectives on the nature of non-lethal weapons development.

The Chemical Weapons Convention Walter Krutzsch, Eric Myjer, Ralf Trapp, 2014-08-07 This book provides an article-by-article commentary on the text of the Chemical Weapons Convention (CWC) and its Annexes, one of the cornerstone disarmament and arms control agreements. It requires the verified elimination of an entire category of weapons of mass destruction and their means of production by all its States Parties within established time lines, and that prohibits any activities to develop or otherwise acquire such weapons. Cross-cutting chapters alongside the detailed commentary, by those intimately involved in the development of the Convention, assess the history of the efforts to prohibit chemical weapons, the adoption of the Convention and the work of the Preparatory Commission, the entry into force of the Convention to the Second Review Conference, and the need for a new approach for the governance of chemical weapons. Written by those involved in its creation and implementation, this book critically reviews the practices adopted in implementing the Convention, as well as the challenges ahead, and provides legal commentary on, and guidance for, its future role. It assesses how to adapt its implementation to advances in science and technology, including the discovery of new chemicals and the development of biochemical 'non-lethal' compounds that influence behaviour. It addresses the legal framework within which the Organization for the Prohibition of Chemical Weapons (OPCW) takes decisions, both with

regard to the OPCW's own regulatory framework and regarding wider international norms, accepted principles, and practices. The Commentary draws conclusions on how the prohibitions against chemical weapons can be strengthened and the stature of the OPCW protected. It highlights the involvement of industry and academia in this prohibition, creating a symbiosis between effective governance and the legal framework of the Convention. This book is an authoritative, scholarly work for anyone interested in the Chemical Weapons Convention, in international disarmament and arms control law, and in the work of international organizations, and a practical guide for individuals and institutions involved in the Convention's day-to-day implementation.
