Doctrinal History From 1980 To 2018 U.S. Army, Over 2,800 total pages ... INTRODUCTION

Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles. Maneuver forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company. Beyond Repair Charles Faddis,2011-10-04 From the author's Introduction: Let me start by saying

what this book is not. It is not an attack on the men and women of the Clandestine Service of the Central Intelligence Agency, the overwhelming majority of whom are dedicated, patriotic Americans working hard everyday on behalf of their fellow citizens. God knows that they do not do it for the money nor do they do it for the recognition. They do it because they believe in the work, and because they know, as I do, that there really are monsters in the world, and someone has to protect us from them. It is also not an argument against the existence of a central human intelligence collection organization within the United States Government. We desperately needed a central intelligence agency in 1947 when the CIA was created. We even more desperately need such an entity today. The threats facing us are multiplying and becoming more complex. The time horizons in which threats are emerging are shortening. Technology is evolving at an astonishing rate, and we really are fast approaching the day when there will be dozens of groups and nations on this planet capable of threatening us with biological, chemical, radiological and nuclear weapons. This is not pulp fiction. This is reality. This book is an argument that the existing Central Intelligence Agency is no longer capable

of performing the task for which it was designed and must, rapidly, be replaced.

Technical Aspects of Toxicological Immunohistochemistry Syed A. Aziz, Rekha Mehta, 2015-12-23

This authoritative volume examines immunohistochemical methods aimed at investigating the toxicologic pathology of rodent, non-human primate and aquatic animal tissues. Eleven comprehensive chapters provide pathologists and researchers in various sub-disciplines of toxicology with a comprehensive review of the methods and approaches for immunohistochemical staining in various target tissues. It explores the tissue-antigen and antibody-specific problems that may be encountered during the staining procedures and provide potential avenues for resolving various methodological issues. Special attention is paid to the latest enhancement procedures for antigen retrieval and visualization as well as image analysis and antigen quantification. Written by leading researchers in toxicology and pathology, this book is a significant resource for toxicologists and pathologists working with rodents, monkeys and aquatic animal tissues.
