The Cubies' ABC Mary Chase Mills Lyall, 2022-08-10 This book was written by Mary Mills Lyall in collaboration with her architect husband Earl Harvey Lyall, who also illustrated it. The Cubies' ABC is a delightful and humorous satirical alphabet book that makes fun of Cubists while pretending to be a kid's book. Three unidentified individuals are called The Cubies. Each has green hair and is one of three different colors: blue, mustard, and magenta. Instead of using cubes to build them, Earl Lyall used pyramids. They frequently feature jack-o'-lantern-like leering grins, have red triangle eyes and mouths, and have triangular shapes. They frequently scowl and come out as purposefully dim-witted. They swoon over anything Cubist and mock objectivity throughout the entire book.

Memories of Little Cubie William Shrum, 2016-04-05 This book is the love of my mothers memories for everyone to enjoy. The little community isn't as hustle and bustle as it used to be and there aren't that many people there anymore, but there is in the memories that are in this book. The memories and the photos will live forever. This book will be in the Stuttgart Public Library and the DeWitt Public Library.

Seven Bloody Years Jerry Hatchett, What if your biggest dream turned into your worst nightmare? Matt Decker has stepped away from the day-to-day of his company Decker Digital and left it in the capable hands of his righthand man Abdul Abidi. For five years, Matt has worked to create the world's most advanced AI, one he will enter into a global competition that will award a billion-dollar prize and an unparalleled opportunity to help shape the future of technology. With the entry deadline just seven days away, Matt is working like a madman to complete the project. Then things start going very wrong. The nation has recently split into two nations, the United States of America and the Progressive States of America, and the two sides are at each other's throats with Matt caught in the crossfire. Even worse, bizarre rumblings are coming from the Middle East at the worst possible moment for all involved. A charismatic stranger has arrived on the scene, promising to finally end the bloodshed that has drenched the region for thousands of years. But he may not be what he seems. Not at all. When the president of the USA calls on Matt to help, Matt is torn between pursuing his dream or pursuing a much larger truth and solution. Can he pull off both, or will both end in disaster and destroy him?

A Decade of the Berkeley Math Circle Zvezdelina Stankova, Tom Rike, 2015-02-03 Many mathematicians have been drawn to mathematics through their experience with math circles. The Berkeley Math Circle (BMC) started in 1998 as one of the very first math circles in the U.S. Over the last decade and a half, 100 instructors--university professors, business tycoons, high school teachers, and more--have shared their passion for mathematics by delivering over 800 BMC sessions on the UC Berkeley campus every week during the school year. This second volume of the book series is based on a dozen of these sessions, encompassing a variety of enticing and stimulating mathematical topics, some new and some continuing from Volume I: from dismantling Rubik's Cube and randomly putting it back together to solving it with the power of group theory; from raising knot-eating machines and letting Alexander the Great cut the Gordian Knot to breaking through knot theory via the Jones polynomial; from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of Dirichlet, Möbius, and Euler; from leading an army of jumping fleas in an old problem from the International Mathematical Olympiads to improving our own essay-writing strategies; from searching for optimal paths on a hot summer day to questioning whether Archimedes was on his way to discovering trigonometry 2000 years ago. Do some of these scenarios sound bizarre, having never before been associated with mathematics? Mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader. Whether at a beginner, an intermediate, or an advanced level, anyone can find a place here to be provoked to think deeply and to be inspired to create. In the interest of fostering a

greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).

INSIDE THE CHI LITES MUSIC Darren Cubie ,2022-12-26 The son of an R&B legend tells the incredible but true story of a family torn apart by greed, corruption and the systematic abuse of black artists in the United States. Darren Cubie grew up in St. Louis not knowing why assassination attempts, FBI investigations, and witness protection programs weren't supposed to be a 'normal' part of life. With the hall of fame success of the iconic soul group known as the Chi-Lites, Darren's father, founding member Creadel "Red" Jones came a terrible price. Like so many other black artists of the day, the devil was in the details in the form of contracts and agreements with the mob filtered thru corrupt record executives and banksters. The bitter ending of Creadel's journey in 1994, penniless on the streets of L.A., has spurred Darren on to become a champion for artists everywhere who've suffered from this decades-old system of abuse

Trends in the Judiciary Wendell C. Wallace,Michael M. Berlin,Dilip K. Das,2021-12-30 Trends in the Judiciary: Interviews with Judges from Across the Globe, Volume Four, provides insights into the lives, working environments, and social milieus of a select group of judges. These legal luminaries, often viewed as pedantic in their ontology, serve the crucial role of preserving the human rights of individuals. This text offers detailed data emanating from the narratives of judges who were interviewed by a wide range of academicians, from emerging and mid-career scholars to professionals and established professors. The narratives of the judges are interspersed with research data and country details in an effort to enhance the knowledge base of the readership. Judges from Asia, Africa, the Caribbean, Europe, the Pacific Islands, New Zealand, North America, and South America all contributed to this text by sharing information on their careers as well as insights as they traversed their profession. The readership of this manuscript will experience the thought processes of judges in relation to the social, cultural, economic, and political context of their respective nations and the gender issues, subtle attempts at juridical control, dealing with powerful criminals, and the lives of judges who have other interests besides interpreting and applying the law. The international, cross-cultural perspectives presented in this book should be of significant interest to academics, practitioners, students, criminologists, and the criminal justice community, and those interested in comparative legal studies across the globe.

Groups, Rings and Galois Theory Victor Percy Snaith,1998 This book is ideally suited for a two-term undergraduate algebra course culminating in a discussion on Galois theory. It provides an introduction to group theory and ring theory en route. In addition, there is a chapter on groups--including applications to error-correcting codes and to solving Rubik's cube. The concise style of the book will facilitate student-instructor discussion, as will the selection of exercises with various levels of difficulty. For the second edition, two chapters on modules over principal ideal domains and Dedekind domains have been added, which are suitable for an advanced undergraduate reading course or a first-year graduate course.

Inside Rubik's Cube and Beyond C. Bandelow, 2012-12-06 On January 30, 1975 Ernő Rubik Jr., professor of architecture and design in Budapest, was granted the Hungarian patent number 170062 for a terbeli logikai játék--A game of spatial logic. Between 1978 and March 1981 this object--Bűvös Kocka in Hungary, der Magische Würfel or Zauberwürfel in Germany, le Cube Hongrois in France and the Magic Cube or Rubik's Cube in Great Britain and the USA--has sold more than ten million copies. And they were not merely sold! A highly contagious twist mania has been spreading throughout families, offices and waiting rooms. Many classrooms sound as if an army of mice were hard at work behind the desks. What is so fascinating about this cube, which competes with Hungarian salami and the famous Tokaj wine in the currency-winning export market? For one thing, it is an amazing technical tool. How does it work? Moreover, the contrast between its innocent, innocuous appearance and the hidden difficulty of its solution offers a serious challenge to all puzzle fans, but especially to those mathematicians who are professionally concerned with logical deduction
