Spaceflight Revolution James R. Hansen, 1995  
Proliferation of Weapons of Mass Destruction  
, 1993

Astronomical Odds Geoffrey Sommer, 2005 Addresses the cosmic impact hazard (the threat to the Earth posed by asteroids and comets) as an extreme example of a low-probability, high-consequence policy problem. This analysis presents a comprehensive framework for dealing with the technical and societal uncertainties surrounding the impact hazard. It reviews the physical nature of the threat and both the history and mechanisms of society's response to the hazard, dwelling on the social costs of false positives. The author constructs an illustrative cost-benefit model on the foundations of prior work, with parameters of social response added and then varied to assess the robustness of a proposed policy intervention: social reassurance by means of a demonstrated mitigation capability. He concludes by noting that a common flaw of prior analysis is to give lip service to low probability and to focus instead on high consequence; that there is frequent confusion between ex ante and ex post perspectives; that uncertain costs are often treated as nonexistent costs; and that warning is a social function, not a technical function, and those who issue warnings of a given hazard should not stand to benefit from those warnings.

**A History of Chemical Warfare** K. Coleman, 2005-05-23 This book provides an analysis of the development and deployment of chemical weapons from 700BC to the present day. The First

World War is examined in detail since it remains the most significant experience of the chemical threat, but the Second World War, and post-war conflicts are also evaluated. Additionally, protocols attempting to control the proliferation and use of chemical weapons are assessed. Finally, the book examines the threat (real and imagined) from a chemical warfare attack today by rationally assessing to what extent terrorist groups around the world are capable of making and using such weapons.

**Astrobiology** Julian Chela-Flores,Guillermo A. Lemarchand,John Oró,2012-12-06 The general topic of this book concerns the origin, evolution, distribution, and destiny of life in the Universe. It discusses the transition from inert matter to cellular life and its evolution to fully developed intelligent beings, and also the possibility of life occurring elsewhere, particularly in other environments in our own and other solar systems. The theoretical framework of Astrobiology may be probed with a forthcoming series of space missions, which at the time of writing are being planned for the next 10 to 15 years. Advanced extraterrestrial life can also be probed by means of radioastronomy in the well-established project of search for extraterrestrial intelligence. Astrobiology pays special attention to the robust growth in our capacity to search for microorganisms, as well as signals of extraterrestrial life, with recent significant technological progress in planetary science and radioastronomy. The progress of the main space agencies is highlighted. Audience: This volume is

aimed at advanced undergraduate and graduate students, as well as researchers in the many areas of basic, earth, and life sciences that contribute to the study of chemical evolution and the origin of life.

Startup Jerry Kaplan, 2014-07-08 The classic account of the early days of tech, named one of the 10 best business books of the year by Business Week: "Riveting, wry, and often wise."—The Washington Post Jerry Kaplan had a dream: he would redefine the known universe (and get very rich) by creating a new kind of computer. All he needed was sixty million dollars, a few hundred employees, and a maniacal belief in his ability to win the Silicon Valley startup game. Kaplan, a well-known figure in the computer industry, founded GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for his revolutionary idea. Along the way, Kaplan vividly

recreates his encounters with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates and John Sculley. And no one—including Kaplan himself—is spared his sharp wit. “What separates Kaplan’s tale from other start-up stories is the insight he provides about dealing with two of America’s largest computer companies—IBM and Microsoft...Readers interested in entrepreneurial adventurism will find Kaplan’s tale entertaining.”—Publishers Weekly “Kaplan tells it with novelistic style replete with races against the clock and sharp character sketches...An insider’s well-written story of the death of a new machine.”—Kirkus Reviews “A winner.”—Wired

The material used in the book has been collected from different countries, as the development of this field has occurred separately due to the classified nature of the subject. Thus the reader not only has an overall picture of solid rocket propulsion technology but a comprehensive view of its different developmental permutations worldwide.
