Wicked Problems of Water Quality Governance James E. Nickum, Raya Marina Stephan, Henning Bjornlund, 2022-12-26 This book explores the many dimensions of water quality problems in different parts of the globe, with focus on problems of governance, from legal frameworks to social discourses and compensation measures. Sustainable Development Goal (SDG) 6.3 on Water and Sanitation emphasizes the centrality of improving water quality to attain sustainable development. Yet the obstacles to achieving this goal are significant. This book explores the variety of difficult, possibly intractable "wicked" problems of water quality governance around the world. Cases include the challenge of managing water from source to sea, exploring why attempts to do so have come up short in limiting harm to the Great Barrier Reef; differing social discourses on market based instruments in Canada; efforts to bring to closure the human legacies of Minamata methyl mercury poisoning half a century ago in Japan; current problems of mercury use in Andean mining; misalignment of established Eastern European water laws with those of the EU; water quality markets in China; the impacts of service coverage and quality on low income households in countries from New Zealand to Bangladesh and Malawi; the importance of perceptions, ranging from the use of treated wastewater by farmers in the MENA region to consumers in Fukushima and to users of the artificial river in Beijing's Olympic Park; and finally the confluence of wicked problems in refugee camps facing COVID. The chapters in this book were originally published in the journal, *Water International*.

Wealth Creation without Pollution - Designing for Industry, Ecobusiness Parks and Industrial Estates Brian D'Arcy, Lee-Hyung Kim, Marla Maniquiz-Redillas, 2017-11-15 The development of eco-industrial parks and associated 'ecological industry' concepts offer progressive integrated approaches to resolve pollution problems from effluents and wastes of all kinds. Most industry however is now located in business parks and industrial estates, with relatively few industries having direct discharges of process effluents to the water environment. But that does not mean no pollution. Many of these estates are very large, with many companies of all kinds spread over extensive areas. All have surface water drainage and stormwater runoff is often contaminated by many diffuse sources. *Wealth Creation without Pollution* is the culmination of several years of deliberations by academics and regulators, engaging with industrial and commercial sectors to characterise and quantify environmental problems and identify best practice solutions. Equally important have been efforts to explore sufficiently flexible regulatory regimes that offer effective means to prevent pollution and achieve good working environments in which industry and commerce can flourish. This book explores how modern industries are striving towards more sustainable practices, with case studies of impacts and of greener industry practices, as well as philosophical and policy papers. The role of regulators, planners and government in fostering a greener industrial base is also examined. *Wealth Creation without Pollution* is a valuable text book for environmental science and engineering students, and a useful resource for industrial architects, developers and practitioners.

Water Policy and Governance in Canada Steven Renzetti, Diane P. Dupont, 2016-10-31 This book provides an insightful and critical assessment of the state of Canadian water governance and policy. It adopts a multidisciplinary variety of perspectives and considers local, basin, provincial and national scales. Canada's leading authorities from the social sciences, life and natural sciences address pressing water issues in a non-technical language, making them accessible to a wide audience. Even though Canada is seen as a water-rich country, with 7% of the world's reliable flow of freshwater and many of the world's largest rivers, the country nevertheless faces a number of significant water-related challenges, stemming in part from supply-demand imbalances but also a range of water quality issues. Against the backdrop of a water policy landscape that has changed significantly in recent years, this book therefore seeks to examine water-related issues that are not only important for the future of Canadian water management but also provide insights into transboundary management, non-market valuation of water, decentralized governance methods, the growing importance of the role of First Nations peoples, and other topics in water management that are vital to many jurisdictions globally. The book also presents forward-looking approaches such as resilience theory and geomatics to shed light on emerging water issues. Researchers, students and those directly involved in the management of Canadian waters will find this book a valuable source of insight. In addition, this book will appeal to policy analysts, people concerned about Canadian water resources specifically as well as global water issues.

Sustainable City Regions: Tetsuo Kidokoro, Noboru Harata, L.P. Subanu, J. Jessen, A. Motte, E.P. Seltzer, 2008-08-27 How should regional cities develop regional development strategies for their sustainable future? How can such strategies work effectively? Regional cities are now at a crossroads: will they decline or be regenerated under the impacts of globalization? Their sustainable regeneration as creative regional centers will play a decisive role in their sustainable development as a whole, but only with viable regional spatial strategies that strengthen the network of cities and their hinterlands. The concern here lies in urban regeneration and strategic spatial planning at the city-region level. This book records observations of 12 dynamically changing regional cities in Asia, Europe and the United States. The form of the city region, urban regeneration and strategic spatial planning as well as the local and regional governance of each city are examined. Through this empirical and comparative analysis, essential lessons are drawn, which will add a new perspective to discussions on the sustainable future of regional cities in an age of globalization.

The United Nations world water development report, 2017 WWAP, UNESCO, 2017-03-15 The United Nations World Water Assessment Programme (WWAP) is hosted and led by UNESCO. WWAP brings together the work of 31 UN-Water Members and 38 Partners to publish The United Nations World Water Development Report, (WWDR) series. The annual World Water Development Reports focus on strategic water issues. UN-Water Members and Partners, all experts in their respective fields, contribute the latest findings on a specific theme. The 2017 edition of the World Water Development Report focuses on 'Wastewater' and seeks to inform decision-makers, inside and outside the water community, about the importance of managing wastewater as an undervalued and sustainable source of water, energy,

nutrients and other recoverable by-products, rather than something to be disposed of or a nuisance to be ignored. The report's title - Wastewater: The Untapped Resource - reflects the critical role that wastewater is poised to play in the context of a circular economy, whereby economic development is balanced with the protection of natural resources and environmental sustainability, and where a cleaner and more sustainable economy has a positive effect on the water quality. Improved wastewater management is not only critical to achieving the Sustainable Development Goal on clean water and sanitation (SDG 6), but also to other goals of the 2030 Agenda for Sustainable Development.

Neural Information Processing Minho Lee,Akira Hirose,Zeng-Guang Hou,Rhee Man Kil,2013-10-29 The three volume set LNCS 8226, LNCS 8227 and LNCS 8228 constitutes the proceedings of the 20th International Conference on Neural Information Processing, ICONIP 2013, held in Daegu, Korea, in November 2013. The 180 full and 75 poster papers presented together with 4 extended abstracts were carefully reviewed and selected from numerous submissions. These papers cover all major topics of theoretical research, empirical study and applications of neural information processing research. The specific topics covered are as follows: cognitive science and artificial intelligence; learning theory, algorithms and architectures; computational neuroscience and brain imaging; vision, speech and signal processing; control, robotics and hardware technologies and novel approaches and applications.

GIS and Geostatistical Techniques for Groundwater Science Dr. Senapathi Venkatramanan,Dr. Prasanna Mohan Viswanathan,Sang Yong Chung,2019-05-28 GIS and Geostatistical Techniques for Groundwater Science provides a detailed synthesis of the application of GIS and geostatistics in groundwater studies. As the book illustrates, GIS can be a powerful tool for developing solutions for water resource problems, assessing water quality, and managing water resources. Beginning with an introduction to the history of GIS and geostatistical techniques in groundwater studies, the book then describes various spatial techniques, including case studies for various applications, from quality assessment, to resource management. This book assembles the most up-to-date techniques in GIS and geostatistics as they relate to groundwater, one of our most important natural resources. Provides details on the application of GIS and statistics in groundwater studies Includes practical coverage of the use of spatial analysis techniques in groundwater science Bridges the gap between geostatistics and GIS as it relates to groundwater science and management Offers worldwide case studies to illustrate various techniques and applications in addressing groundwater issues

Water Quality in Drinking Water Distribution Systems Mirjam Blokker,Joost Van Summeren,Vanessa Speight,2020-12-02 Safe drinking water is paramount for the health and wellbeing of all human populations. Water is extracted from surface and groundwater sources and treated to comply with drinking water standards. The water is then circulated through the drinking water distribution system (DWDS). Within the DWDS, water quality can deteriorate due to microbiological growth, chemical reactions, interactions with ageing and deteriorating infrastructure, and through maintenance and repair activities. Some DWDS actions may serve to improve water quality; however, these can adversely impact the drinking water system and cause instances of poor water quality or disease outbreaks. We invited papers covering examinations of DWDS design and operational practices and their impact on water quality. We received papers based on practical research in real DWDS and laboratory test facilities. We also received papers on novel modelling approaches. A wide range of water quality aspects was gathered, including temperature, disinfection, bacterial communities and biofilm, (fecal) contamination and QMRA, and the effects of flushing and intermittent supply.

WATER, NATURE AND PEOPLE 2015 Summer K-water,2015-08-27 'Water, Nature and People is a quarterly magazine published by K-water with stories of smart water management technologies and so on.

Smart Water Management Henning Bjornlund,Stephanie Kuisma,James E. Nickum,Raya Marina Stephan,2023-05-22 This book contributes to the debate about the suitability and challenges of the Smart Water Management (SWM) approach. Smart Water Management has increasingly been promoted to manage water and wastewater more efficiently and cost effectively by industries and utilities in urban contexts at regional or city scales, while reducing overall consumption. It is based on the use of Information and Communication Technology (ICT) to provide real-time, automated data to resolve water challenges. Many of these technologies are complex and costly, however, and the approach tends to overlook cheaper and less high-tech (softer) approaches to address the same problems. Yet there may be opportunities for using them even in resource short rural communities in developing countries. The book includes examples of SWM systems in practice in diverse locations from Korea, Mexico, Paris, the Canary Islands and southern Africa, aimed at addressing a diverse set of problems, including monitoring water supply to refugees. Critical voices highlight the need for smart institutions to accompany smart technologies, the absurdity of applying SWM to dysfunctional legacy infrastructure systems, whether its adoption raises moral hazards, and whether SWM is the latest example of hegemonic masculinity in water management. The chapters in this book were originally published in Water International.

Piggery Waste Management Euiso Choi,2007-08-31 Among animal wastes, piggery waste is the most troublesome. Pig production industries have been growing as the demand for pork meat has increased, and as a result the waste management problem of piggery waste will become more serious in the future. The land receiving the piggery wastes has already become over saturated with Nitrogen and Phosphorus in many countries and the solution to the waste problem is further complicated as the land area utilised for disposal becomes restricted. This book identifies and characterises the key issues involved in dealing with the management of piggery waste and provides recommendations on sustainable treatment regimes. All the technologies available for the treatment of piggery waste are reviewed,

including conventional and emerging technologies from composting and anaerobic digestion to nitrate nitrification and denitrification, Anammox, advanced oxidation, adsorption and membrane technologies. Design procedures for biological nitrogen removal are introduced together with temperature effects. Phosphorus removal characteristics as struvite and other biological forms are also reviewed. Integrated treatment schemes are discussed to build an understanding of the systems to achieve sustainable piggery waste management. Examples of integrated systems are presented, including recent modification of lagoon systems in the US; performances of energy recovery systems in Europe; wastewater treatment systems in Korea with limited land area as well as tropical experiences in Singapore and Malaysia. This work will be an invaluable source of information for all those concerned with the research and practice of animal waste treatment. Practising engineers can use this work for planning, design and operation of treatment plants and it will also be suitable as a reference for policy makers and planners.
