Astrology for the New Century Dosajna,2021-08-27 Over the past century, astrological exploration and development has been systematically curtailed through skeptical ignorance and academic propaganda which has downplayed the science to a point of near extinction. This book defeats the skeptics at their own game by not only creating an air-tight argument towards astrology's validity, but by also providing the necessary tools to put astrology to the empirical test. From the outset, this book addresses some of astrology's biggest criticisms, and reformats the mental and structural framework around astrology to where objective scientific observation and Jungian psychological theory act as the main cornerstones from which all methodologies that exist within this book emerge. This book is a culmination of the previous decade of my life. During that time, I became certified in astrology, taught classes, wrote articles, gave lectures, helped clients, read countless books, and studied with some of the best in the profession. You will learn step-by-step procedures that I have personally created and perfected over the years that I use on a daily basis. It is my hope that by the time you have finished this book, you will understand and possess a core foundational knowledge of astrology that you can use not only in your own life, but in the lives of others if you decide to become an astrological practitioner. All you need to possess is a willingness to learn, honesty to see your true colors, tenacity to learn from your mistakes, and an open mind to finally see the true essence and potentiality of astrology, which has mostly been dormant for the past two-thousand years and only understood by the select few who have dared to explore the vast workings of this universe and our place within.

Babylonian Mathematical Astronomy: Procedure Texts Mathieu Ossendrijver,2012-04-24 This book contains new translations and a new analysis of the procedure texts of Babylonian mathematical astronomy, the earliest known form of mathematical astronomy of the ancient world. The translations are based on a modern approach incorporating recent insights from Assyriology and translation science. The work contains updated and expanded interpretations of the astronomical algorithms and investigations of previously ignored linguistic, mathematical and other aspects of the procedure texts. Special attention is paid to issues of mathematical representation and over 100 photos of cuneiform tablets dating from 350-50 BCE are presented. In 2-3 years, the author intends to continue his study of Babylonian mathematical astronomy with a new publication which will contain new editions and reconstructions of approx. 250 tabular texts and a new philological, astronomical and mathematical analysis of these texts. Tabular texts are end products of Babylonian math astronomy, computed with algorithms that are formulated in the present volume, Procedure Texts.
