*It's Me-* Harry Harry Levinson, 2009-01-01 The typical struggle in America is the rise from poverty, which is compounded when one has to rise through the ranks of major social institutions. In this book, Harry Levinson documents his climb through three major clinical and educational institutions. Such a climb inevitably encounters resistance and hostility, yet Dr. Levinson found it both challenging and rewarding. In this personal volume, the author

recounts his life history, including time spent on the faculties of MIT and Harvard Universities, as well as his relationship with the Menninger Foundation. About the Author: Harry Levinson, Ph.D. is chairman emeritus and founder of The Levinson Institute. He is a clinical professor of psychology emeritus in the Department of Psychiatry, Harvard Medical School. Born in Port Jervis, New York, Dr. Levinson received his B.S. degree and his M.S. degree from Emporia (Kansas) State University. He took his training in clinical psychology in the Veterans Administration-Menninger Foundation University of Kansas program, which led to his Ph.D. from the university. As coordinator of professional education at Topeka State Hospital from 1950 to 1953, he played a key role in the dramatic and widely acclaimed reformation of the Kansas state hospital system. In 1954, Dr. Levinson created, and for the next fourteen years directed, the Division of Industrial Mental Health of The Menninger Foundation. During the academic year 1961-62, he was a visiting professor at the Sloan School of Management at the Massachusetts Institute of Technology. From 1968 to 1972, he was the Thomas Henry Carroll-Ford Foundation Distinguished Visiting Professor in the Harvard Graduate School of Business Administration. In 1992, he received the American Psychological Association Award for Distinguished Professional Contribution to Knowledge. In 2000, the American Psychological Association presented him with the Gold Medal for Life Achievement in the Application of Psychology.

**The Fundamentals of Figure Drawing** Barrington Barber, 2017-06-13 The ability

to draw the human form accurately and competently is a primary goal for many aspiring artists, despite the current trend in the art establishment away from figurative subjects. The book is intended for anyone who wants to discover every aspect of what for centuries was regarded as the real test of an artist's mettle. Renowned teacher and artist Barrington Barber begins his exploration with anatomy, an understanding which is vital if the artist is to handle form and translate what he sees into a believable representation of life. He goes on to look at the whole figure: clothed, drawn from life, in action and in detail. Supported by sections on composition, styles and a step-by-step guide to a final composition, he has once again achieved a brilliantly inspirational art book. Comprehensive, easy to follow and packed with over 300 of Barrington Barber's illustrations, The Fundamentals of Figure Drawing is a must for artists of all abilities.

**Autonomic Road Transport Support Systems** Thomas Leo McCluskey, Apostolos Kotsialos, Jörg P. Müller, Franziska Klügl, Omer Rana, René Schumann, 2016-05-03  
The work on Autonomic Road Transport Support (ARTS) presented here aims at meeting the challenge of engineering autonomic behavior in Intelligent Transportation Systems (ITS) by fusing research from the disciplines of traffic engineering and autonomic computing. Ideas and techniques from leading edge artificial intelligence research have been adapted for ITS over the last 30 years. Examples include adaptive control embedded in real time traffic control systems, heuristic algorithms (e.g. in SAT-NAV systems),

image processing and computer vision (e.g. in automated surveillance interpretation). Autonomic computing which is inspired from the biological example of the body's autonomic nervous system is a more recent development. It allows for a more efficient management of heterogeneous distributed computing systems. In the area of computing, autonomic systems are endowed with a number of properties that are generally referred to as self-X properties, including self-configuration, self-healing, self-optimization, self-protection and more generally self-management. Some isolated examples of autonomic properties such as self-adaptation have found their way into ITS technology and have already proved beneficial. This edited volume provides a comprehensive introduction to Autonomic Road Transport Support (ARTS) and describes the development of ARTS systems. It starts out with the visions, opportunities and challenges, then presents the foundations of ARTS and the platforms and methods used and it closes with experiences from real-world applications and prototypes of emerging applications. This makes it suitable for researchers and practitioners in the fields of autonomic computing, traffic and transport management and engineering, AI, and software engineering. Graduate students will benefit from state-of-the-art description, the study of novel methods and the case studies provided.
