Korea's Platform Empire Seongcheol Kim, Dal Yong

Jin, 2024-06-07 *Korea's Platform Empire* explores the evolution of digital platforms in South Korea's media sphere, and their global political, economic, cultural, and technological influence. With a focus on Korea in the context of the global platform revolution, the book takes a methodical look at the broader social implications and the impact on cultural production. The authors explore various facets of the media and cultural industries—looking beyond social media to news broadcasting and the music industry—and look at the policy and regulations behind this shifting technological advancement. This book will appeal to students and scholars working on media industries, digital media, platform studies, information and technology studies, Korean and East Asian media studies, and the creative and cultural industries.

Handbook for Asian Studies Specialists Noriko

Asato, 2013-10-08 An indispensable tool for librarians who do reference or collection management, this work is a pioneering offering of expertly selected print and electronic reference tools for East Asian Studies (Chinese, Japanese, and Korean).

Handbook for Asian Studies Specialists: A Guide to Research Materials and Collection Building Tools is the first work to cover reference works for the main Asian area languages of China, Japan, and Korea. Several leading Asian Studies librarians have contributed their many decades of experience to create a resource that gathers major reference titles—both print and online—that would be useful to today's Asian Studies librarian. Organized by language group, it offers useful information on the many subscription-based and open-source electronic tools relevant to Asian Studies. This book will serve as an essential resource for reference collections at academic libraries.

Previously published bibliographies on materials deal with China or Japan or Korea, but none have coalesced information on all

three countries into one work, or are written in English. And unlike the other resources available, this work provides the insight needed for librarians to make informed collection management decisions and reference selections.

After the Map William Rankin, 2016-07 Over the course of the twentieth century, there was a major shift in practices of mapping, as centuries-old methods of land surveying and print publication were incrementally displaced by electronic navigation systems. William Rankin argues that although this shift did not render traditional maps obsolete, it did revise the goals of the mapping sciences as a whole. Military cartographers and civilian agencies alike developed new techniques for tasks that exceeded the capabilities of paper, such as aiming long-range guns, navigating in featureless environments, regularizing air travel, or drilling for offshore oil. *After the Map* reveals the major conceptual ramifications of these and other changes and in doing so offers a new way of understanding the central political-geographic shift of the twentieth century. Seen first and foremost as affecting a transformation in the nature of territory, the change from paper mapping to electronic systems is not a story about technological improvement or the wizardry of precision; instead, it is about the kind of geographic knowledge and therefore governance that can exist in the first place.

Daum's boys Alan Ross, 2015-04-01 This highly original book is the first in-depth study of a footsoldier of the seventeenth-century German Republic of Letters. Its subject, the polymath and schoolteacher Christian Daum, is today completely forgotten, yet left behind one of the largest private archives of any early modern European scholar. On the basis of this unique source, this book

portrays schools as focal points of a whole world of Lutheran learning outside of universities and courts, as places not just of education but of intense scholarship, and examines their significance for German culture. Multi-confessional Germany was different from Catholic France and Protestant England in that its network of small cities fostered educational and cultural competition and made possible a much larger and socially open Republic. This book allows us for the first time to understand how the Republic of Letters was constructed from below and how it was possible for individuals from relatively humble backgrounds and occupations to be at the centre of European intellectual life. This book is aimed at other specialists as well as postgraduate students in the fields of cultural and social history, and can also serve as an introduction to recent European literature on early modern scholarship for undergraduate students.
