More Good Questions Marian Small, Amy Lin, 2010-05-15 We know that Differentiated Instruction (DI) helps all students to learn. Yet DI challenges teachers, and nowhere more than in mathematics. In this new book, written specifically for secondary mathematics teachers, the authors cut through the difficulties with two powerful and universal strategies that teachers can use across all math content: Open Questions and Parallel Tasks. Showing teachers how to get started and become expert with these strategies, this book also demonstrates how to use more inclusive learning conversations to promote broader student participation. Strategies and examples are

organized around Big Ideas within the National Council of Teachers of Mathematics (NCTM) content strands. With particular emphasis on Algebra, chapters also address Number and Operations, Geometry, Measurement, and Data Analysis and Probability, with examples included for Pre-Calculus. To help teachers differentiate math instruction with less difficulty and greater success, this resource: Underscores the rationale for differentiating secondary math instruction. Provides specific examples for secondary math content. Describes two easy-to-implement strategies designed to overcome the most common DI problems that teachers encounter. Offers almost 300 questions and tasks that teachers and coaches can adopt immediately, adapt, or use as models to create their own, along with scaffolding and consolidating questions. Includes Teaching Tips sidebars and an organizing template at the end of each chapter to help teachers build new tasks and open questions. Shows how to create a more inclusive classroom learning community with mathematical talk that engages participants from all levels. From Idea to Web Start-up in 21 Days Jason Glaspey, Scott Kveton, 2010-09-29
Once upon a time, starting a business meant months of researching, refining business goals and writing business plans, talking to investors and banks, negotiating for loans, and raising money. But today, agile web development practices mean that you can almost launch on an idea and figure it out as you go. At least that's what authors Jason Glaspey and Scott Kveton and their colleague Michael Richardson did when starting bacn.com, an online bacon retailer. In this mouth-watering tale, they describe their process of starting a business on a shoestring, including the things they did right and the things they did wrong. Bacn.com didn't make them millionaires – not even close! But the lessons they learned have led to comfortable success on their follow-up ventures. And whether it's choosing a domain name or selecting the right content management systems, buying and storing inventory or figuring out fulfillment, using social media for marketing or finding a location to host an “epic” party, their stories will help you jumpstart your own web business.

Break Free From Burnout In 30 Days Mary Lewis, 2004

The Decline Effect Dean Brooks, A crisis is coming for everyone who uses math and science. For decades now, the classical model of probability (the indifference principle and the Gaussian distribution) has been breaking down and revealing its limitations in fields from economics to epidemiology. Now a new approach has revealed the underlying non-classical principle behind all these 'anomalous' laws: – Pareto's law of elite incomes – Zipf's law of word frequencies – Lotka's law of scientific publications – Kleiber's law of metabolic rates – the Clausewitz-Dupuy law of combat friction – Moore's law of computing costs – the Wright-Henderson cost law – Weibull's law of electronics failures – the Flynn Effect in IQ scores – Benford's law of digit frequencies – Farr's law of epidemics – Hubbell's neutral theory of biodiversity – Rogers' law of innovation classes – Wilson's law of island biogeography – Smeed's law of traffic fatalities The general law behind all these particular laws (and countless others) is the decline effect. As a system ages or grows in size, the rules of probability subtly change. Entropy increases, rare items become rarer, and average performance measures decline. The human meaning of a decline may be positive (decreasing costs, falling epidemic mortality) or negative (lower customer loyalty, decreasing efficiency), but the mathematical pattern is always the same. The implications are enormous, as these examples show: All epidemic diseases

decline in infectiousness and in lethality. HIV-AIDS went from a highly infectious, 95-percent fatal disease, to a survivable condition with a latency of decades. COVID-19 went from a death rate of 7 percent in early 2020, to under 2 percent in 2022. Hereditary dynasties around the world declined smoothly in lifespan, from hundreds of years to tens of years. When democracies replaced monarchies, the decline (in spans of party control) continued.

Contract Law Marco J. Jimenez, 2021-01-31 *Contract Law: A Case & Problem-Based Approach* is a unique casebook that provides an organizational structure introducing students to each major area of contract law before exploring these areas in greater depth later in the casebook. Specifically, the casebook is broken into three major parts, each of which is designed not only to orient the students to the major subject areas of contract law but also meant to help them appreciate the connections and relationships between and among these various subject areas. Part I, the "30,000-foot view,"

familiarizes students with contract law, discusses the sorts of problems with which contract law is concerned, and introduces them to some of the basic rules and theories governing contract law. Part II, the “10,000-foot view,” exposes students to each major substantive area of contract law in more depth by discussing one classic case in each area, along with additional historical, theoretical, and contextual materials to supplement the black-letter doctrine. After finishing Parts I and II, the student will have a basic understanding of each major area of contract law, along with a good understanding of how these parts fit together. Part III is therefore designed to explore each of the major subject areas in greater depth, and is organized along the lines of a traditional contracts casebook, including a healthy mix of classic and modern cases, short problems, and exercises. New to the Second Edition: Additional materials and cases added to explore the contract doctrines of impossibility and impracticability in light of past and current epidemics (in the case of polio) and pandemics (in the case of COVID-19). Additional case added to explore the relationship between Contract Law, Civil Rights, and Constitutional Law. Reorganization of some materials in Chapter 8 (defenses). More focused notes and appendices Professors and student will benefit from: Organization exposes students to main concepts, and gives professors a number of choices about how to teach their course. Helpful doctrinal introductions to each new major substantive section. Historical, theoretical, and comparative materials are presented to help students

understand and think critically about the black-letter rules. "Thinking tools" feature that helps the student think critically about the law, along with theoretical, historical, doctrinal, contextual, and practice-oriented notes enrich the students' black-letter experience. Enjoyable, contextual materials that are included after a number of classic cases help to bring to light fascinating background information.

Down to Earth (Colonization, Book Two) Harry Turtledove, 2002-01-08 In 1942 Hitler led the world's most savage military machine. Stalin ruled Russia, while America was just beginning to show its strength in World War II. Then, in Harry Turtledove's brilliantly imagined Worldwar saga, an alien invasion changed everything: alliances, technology, commerce, and--most of all--the nature of life and death. Nuclear destruction engulfed some of Earth's great cities, and the invaders claimed half the planet before an uneasy peace could be achieved. Colonization takes us into the tumultuous 1960s, as the reptilian Race ponders its uneasy future on the planet it calls Tosev 3. The United States has prospered since the war, and has sent a manned spaceship deep into space. On the other side of the globe, the German Reich remains bloodied but unbowed, brandishing a frightening new weapon and always poised for war. China strains under alien occupation, and from Poland to Jerusalem, Jews must choose between aiding the Race or the Reich. Now, the invaders have been joined by their colonization fleet--millions of newcomers who seek to incorporate our world into their far-flung empire. A violent black market

erupts around ginger--the one substance that deprives the alien colonists of their ability to reason--and a new war threatens, one even deadlier than the last. The clamoring, bellicose tribes of Earth form new alliances and play dangerous games of diplomacy, but the ultimate power broker will be the Race itself. For the colonists have one option no human can ignore. With a vast, ancient empire already in place, the Race has the power to annihilate every living being on Tosev 3 . . . In *Colonization: Down to Earth*, Harry Turtledove continues the breathtaking tale that has established him as one of alternate history's leading practitioners. Populated by a cast that includes the famous, from Khomeni to Himmler, and the unknown--drug smugglers, soldiers, and lovers--this novel continues the excitement of *Colonization: Second Contact*, and weaves a spectacular tale of tyranny and freedom, destruction and hope.
