Public Transit Economics and Deregulation Policy J. Berechman,2013-10-22

Drawing on transit experience from various countries and markets, this book examines the economic environment of transit operations, the cost and production properties of transit service supply and the policies and prospects of transit regulatory reform. The principal objectives of the book are: first to conduct theoretical and empirical analyses of the major factors which jointly determine the economic structure and conditions of the transit sector; and second to explore and suggest policies which could resolve the sector's present crisis and make it economically viable. The first objective is explored in Part One where major structural demand factors and regulatory and subsidy conditions are identified and examined. Analytical and empirical measurement of technical production characteristics of transit services supply is carried out in Part Two. Part Three focuses on transit regulatory reform policy issues. The book is aimed primarily at an audience of transportation professionals, including economists and planners as well as public policy analysts. It requires, in general, a sound background in economics, mainly microeconomics. Thus graduate students in economics, geography, urban planning and public policy, and advanced undergraduates with good training in economics can best benefit from this book.

How to College Andrea Malkin Brenner,LaraHope Schwartz,2019-04-23 The

first practical guide of its kind that helps students transition smoothly from high school to college. The transition from high school—and home—to college can be stressful. Students and parents often arrive on campus unprepared for what college is really like. Academic standards and expectations are different from high school; families aren't present to serve as "scaffolding" for students; and first-years have to do what they call "adulthood." Nothing in the college admissions process prepares students for these new realities. As a result, first-year college students report higher stress, more mental health issues, and lower completion rates than in the past. In fact, up to one third of first-year college students will not return for their second year—and colleges are reporting an increase in underprepared first-year students. *How to College* is here to help. Professors Andrea Malkin Brenner and Lara Schwartz guide first-year students and their families through the transition process, during the summer after high school graduation and throughout the school year, preparing students to succeed and thrive as they transition and adapt to college. The book draws on the authors' experience teaching, writing curricula, and designing programs for thousands of first-year college students over decades.

Automated Fare Collection System & Urban Public Transportation Clifford N. Oporum, 2012-03-06 With its unique features (presented in nine chapters grouped into five major parts), *Automated Fare Collection System And Urban Public Transit: An Economic & Management Approach To Urban Transit Systems* provides a wealth of resourceful information to everyone with interest in mass transit: Part I: Public Transportation, Urban Economy And Automation in Fare Collection Part II: Models of Transportation Pricing Part III: Transportation Research Methods And Models Part IV: Approaches And Trends in Urban Transit Ridership Part V: Epilogue In these parts of the book, Clifford N. Oporum reveals the impact of the automated fare collection system on mass transit and particularly, on the New York City rail rapid transit system. Various effective urban public transportation pricing techniques are presented. Transportation research methods and models including the alogit model and different approaches to transportation research analysis are featured. Alternative scenarios of cost-benefit analysis (CBA) are used extensively along with other feasibility studies strategies to determine the economic and social benefits of the automated fare collection system. The author concludes that as in the case of other industrial sectors, the financial health of the transit industry is very much dependent upon the level of transit patronage, and that automation in fare collection has further encouraged the later. Furthermore, he added that automated fare collection (AFC) is preferred over the mechanical system of fare collection and will make positive impact on both transit ridership and revenue, if efficiently operated. Finally, he stressed that society would be better off financially if the benefits of automation in transit fare collection are fully utilized, and that automation in fare collection has indeed influenced the travel pattern of most mass transit patrons.
