*Primer on Decision Making* James G. March, 2009-01-23 Building on lecture notes from his acclaimed course at Stanford University, James March provides a brilliant introduction to decision making, a central human activity fundamental to individual, group, organizational, and societal life. March draws on research from all the disciplines of social and behavioral science to show decision making in its broadest context. By emphasizing how decisions are actually made -- as opposed to how they should be made -- he enables those involved in the process to understand it both as observers and as participants. March sheds new light on the decision-making process by delineating four deep issues that persistently divide students of decision making: Are decisions based on rational choices involving preferences and expected consequences, or on rules that are appropriate to the identity of the decision maker and the situation? Is decision making a consistent, clear process or one characterized by ambiguity and inconsistency? Is decision making significant primarily for its outcomes, or for the individual and social meanings it creates and sustains? And finally, are the outcomes of decision processes attributable solely to the actions of individuals, or to the combined influence of interacting individuals, organizations, and societies? March's observations on how intelligence is -- or is not -- achieved through decision making, and possibilities for enhancing decision intelligence, are also provided. March explains key concepts of vital importance to students of decision making and decision makers, such as limited rationality, history-dependent rules, and ambiguity, and weaves these ideas into a full depiction of decision making. He includes a discussion of the modern aspects of several classic issues underlying these concepts, such as the relation between reason and ignorance, intentionality and fate, and meaning and interpretation. This valuable textbook by one of the seminal figures in the history of organizational decision making will be required reading for a new generation of scholars, managers, and other decision makers.

**Free to Be Wise** Kirk Youngblood, 2012-06 How can I know God's will for my life? Should I expect God to reveal it to me mystically, or has He already revealed His wisdom in Scripture, which enables me to be wise in my decision making? What faulty methods should I avoid in making decisions, and how can I apply biblical wisdom? Far too many have been paralyzed with indecision because they are looking for a mystical inside track to a new revelation from God. In *Free to Be Wise: A Guide to Biblical Decision Making*, Kirk Youngblood explains how you can avoid the common pitfalls of using a mystical approach to biblical decision making. You will be liberated to follow the wisdom God has already revealed in His Word. Youngblood has thoroughly researched this topic and explains the mysticism versus wisdom paths to learning God's will for your life in a clear and easy-to-understand manner. The Bible gives clear instructions about how we are to live: we are to walk in wisdom and take advantage of every opportunity to accomplish God's will. *Free to Be Wise* will help you learn how to do so. Pastor Kirk Youngblood deals with the most personal and practical issue that any Christian will ever face knowing and obeying God's will. He incisively exposes wrong approaches balanced by an exposition of the authentic biblical way. This book's breadth and depth

ensures that the reader will never need another volume on God's will in order to consistently make God-honoring decisions in life. It deserves the must read label. Richard Mayhue, Th.D. Executive VP and Dean The Master's Seminary Sun Valley, CA

**Smart Economic Decision-Making in a Complex World** Morris Altman,2020-06-09 Smart Economic Decision-Making in a Complex World is a fresh and reality-based perspective on decision-making with significant implications for analysis, self-understanding and policy. The book examines the conditions under which smart people generate outcomes that improve their place of work,

their household and society. Within this work, the curious reader will find interesting open questions on many fascinating areas of current economic debate, including, the role of realistic assumptions robust model building, understanding how and when non-neoclassical behavior is best practice, why the assumption of smart decision-makers is best to understand and explain our economies and societies, and under what conditions individuals can make the best possible choices for themselves and society at large. Additional sections cover when and how efficiency is achieved, why inefficiencies can persist, when and how consumer welfare is maximized, and what benchmarks should be used to determine efficiency and rationality. Makes the case for 'smart and rational' decision-making as a context-dependent rational process that is framed by socio-cultural environment and conditioned by institutional capacities Explains how incorporation of the 'smart' decision-maker concept into economic thought improves our understanding of how, why and when people generate certain outcomes Explores how economic efficiency can be achieved, individual preferences realized, and social welfare maximized through the use of 'smart and rational' approaches

**Risk and Presidential Decision-making** Trenta Luca, 2016-05-20 This book aims at gauging whether the nature of US foreign policy decision-making has changed after the Cold War as radically as a large body of literature seems to suggest, and develops a new framework to interpret presidential decision-making in foreign policy. It locates the study of risk in US foreign policy in a wider intellectual landscape that draws on contemporary debates in historiography, international relations and Presidential studies. Based on developments in the health and environment literature, the book identifies the President as the ultimate risk-manager, demonstrating how a President is called to perform a delicate balancing act between risks on the domestic/political side and risks on the strategic/international side. Every decision represents a 'risk vs. risk trade-off,' in which the management of one 'target risk' leads to the development 'countervailing risks.' The book applies this framework to the study three major crises in US foreign policy: the Cuban Missile Crisis, the seizure of the US Embassy in Tehran in 1979, and the massacre at Srebrenica in 1995. Each case-study results from substantial archival research and over twenty interviews with policymakers and academics, including former President Jimmy Carter and former Senator Bob Dole. This book is ideal for postgraduate researchers and academics in US foreign policy, foreign policy decision-making and the US Presidency as well as Departments and Institutes dealing with the study of risk in the social sciences. The case studies will also be of great use to undergraduate students.

*Responsible Decision Making* Laszlo Zsolnai, 2017-07-28 What should I do?, How should I deal with this?, How should I behave?, How should I act? we ask ourselves daily. But, this is only the first part of the sentence, while the full sentence is What should I do ... to achieve such and such?, for example to complete an assigned task, to do well before my boss or a client, to be pleased with myself, to carry out my plans, to make money in the stock market, to pass an exam, to complete an application, etc. These and similar questions that people ask, consciously or not, openly or not, are decisions. What skills must we master, especially when there is a need to make not only elementary decisions, but also decisions that affect the existence, health, and even lives of people? First, Laszlo Zsolnai writes that we should acquire the skill of gaining knowledge. Only then will we stand a chance of

reacting to things that are improbable today, but could become a fact tomorrow. Also essential is the skill of designing, i.e., preparing actions conceptually in order to make decisions before irreversible changes occur. Finally, it is essential to master the skill of multidimensional judgment within the space defined by effectiveness, efficiency, and ethics. This is Zsolnai's attempt to build a model of making ethical decisions both effectively and efficiently. Therefore, the model is much broader than purely an analytical framework would be. It must tell us how to act rather than limit us to reflection on actions already performed; it must combine decision and praxiological analysis of human conduct. The proposed model enlarges the scope of the debate and suggests new avenues of both rational and responsible decision making. This is an original statement of the crossover of policy and morality.

*Decision and Decision-maker in an Industrial Environment* Lamia Berrah, Vincent Clivillé, 2023-08-29 Decision and Decision-maker in an Industrial Environment developed around the observation that two different decision-makers, faced with the same problem, may not make the same decision. The book proposes explanations for this, ranging from the wholly rational to the irrational, and analyzes different factors in decision-making, such as the intention of the decision-maker, the environment in which their decision is made or the process leading to decision-making. While the common belief is that everything in an industrial environment stems from reasoned decisions, analysis of common practice shows that this is not always the case. This book offers an original perspective by presenting the decision making mechanism from the point of view of the decision maker and their handling of a specific decision-making problem. To learn more about the decision-maker's motivations when faced with these situations, the authors provide a review of the history of decisionmaking and the major trends in decision-making theory. The concepts and methods are presented with illustrations based on the use of an MES, an industrial management software package.

**Real-World Decision Making** Morris Altman, 2015-06-23 The first and only encyclopedia to focus on the economic and financial behaviors of consumers, investors, and organizations, including an exploration of how people make good-and bad-economic decisions. Traditional economic theories speculate how and when people should spend money. But consumers don't always behave as expected and often adopt strategies that might appear unorthodox yet are, at times, more effective than the rule prescribed by conventional wisdom. This groundbreaking text examines the ways in which people make financial decisions, whether it is because they are smart but atypical in their choices ... or just irrational decision makers. A leading authority on behavioral economics, Morris Altman and more than 150 expert contributors delve into key concepts in behavioral economics, economic psychology, behavioral finance, neuroeconomics, experimental economics, and institutional economics to help inform economic models based on reality, not theory. Through 250 informative entries, the book explores various aspects of the subject including decision making, economic analysis, and public policy. In addition to introducing concepts to readers new to the subject, the book sheds light on more advanced financial topics in a manner that is objective, comprehensive, and accessible.
