Your online persona is your new front door. It is likely the first thing that new friends and colleagues learn about you. In the years since this book was first published, the Internet profile and reputation have grown more important in the vital human activities of work, school and relationships. This updated edition explores the various ways that people may use your Internet identity, including the ways bad guys can bully, stalk or steal from you aided by the information they find about you online. The authors look into the Edward Snowden revelations and the government's voracious appetite for personal data. A new chapter on the right to be forgotten explores the origins and current effects of this new legal concept, and shows how the new right could affect us all. Timely information helping to protect your children on the Internet and guarding your business's online reputation has also been added. The state of Internet anonymity has been exposed to scrutiny lately, and the authors explore how anonymous you can really choose to be when conducting activity on the web. The growth of social networks is also addressed as a way to project your best image and to protect yourself from embarrassing statements. Building on the first book, this new edition has everything you need to know to protect yourself, your family, and your reputation online.

Language, Literacy, and Technology Richard Kern, 2015-05-28 From the origins of writing to today's computer-mediated communication, material technologies shape how we read and write, how we construe and share knowledge, and ultimately how we understand ourselves in relation to the world. However, communication technologies are themselves designed in particular social and cultural contexts and their use is adapted in creative ways by individuals. In this book, Richard Kern explores how technology matters to language and the ways in which we use it. Kern reveals how material, social and individual resources interact in the design of textual meaning, and how that interaction plays out across contexts of communication, different situations of technological mediation, and different moments in time. Showing how people have adapted visual forms to various media as well as to social needs, this study culminates in five fundamental principles to guide language and literacy education in a period of rapid technological and social change.

Hidden No More Latrice Cheneé, 2023-04-28 “The darkness cannot hide from You, and we cannot hide from You. Thank you for exposing us to ourselves. We are Hidden No More”. This is my public service announcement, disclosed, “Hidden No More” is a chapter from my story regarding the continual process of becoming who God has created me to be. It is a portion of my life experiences that has brought revelation and understanding. My prayer is that it inspires whoever reads it to become cocooned in God's love and embrace it; that it causes others to want to identify where they are in every area of their lives, focus on becoming better, and to pursue purpose, while triumphing over trials.

We Found Her Hidden Paul Hullah, 2016-05-31 This study examines thematic elements in Christina Rossetti's poetry in order to celebrate and explain an important, undervalued writer and her remarkable artistic quest to achieve an original voice. Critics rightly applaud Rossetti's metrical craftsmanship and songlike lyrical phrasings, but over-attention to formal felicities can impede proper interpretation of content. Through detailed readings of selected poems, this book demonstrates that Rossetti's rigorously controlled use of language and innovative symbolism combine to create radical, hidden intertextual levels of meaning beyond those attainable via biographical decoding, making her a singular bridge between Romanticism and Modernism. From earliest secular interactions with Romantic and Tractarian thought, through *Goblin Market* (1862) and *The Princess Progress* (1866), Rossetti's verse resists straightforward interpretation by subtly interrogating and subverting the patriarchal traditions of writing that it simultaneously extends: love lyric, fairy tale, quest myth, and sonnet. Persuasively constructing a case for the inability of male-ordained poetics to cope with the expression of active female identity, *Monna Innominata* (1881) deconstructs lyric tradition, casting together mediaeval, renaissance, Romantic and Victorian ideologies. This groundbreaking sonnet cycle disturbs poetic conventions and forms the most concentrated, sustained demonstration of the struggle to articulate the female self to be found in Rossetti's oeuvre, perhaps in literary history. The painful sense of irresolution and despair pervading *Monna Innominata* sheds important light upon Christina Rossetti's exclusive production of devotional literature during her final years.

Aspect Core Rulebook FC 2015 SC Heather Gunn, *The Community and the Algorithm: A Digital Interactive Poetics* Andrew Klobucar, 2021-09-07 Digital media presents an array of interesting challenges adapting new modes of collaborative, online communication to traditional writing and literary practices at the practical and theoretical levels. For centuries, popular concepts of the modern author, regardless of genre, have emphasized writing as a solo exercise in human communication, while the act of reading remains associated with solitude and individual privacy. "The Community and the Algorithm: A Digital Interactive Poetics" explores important cultural changes in these relationships thanks to the rapid development of digital internet technologies allowing near-instantaneous, synchronous, multimedia interaction across the globe. The radical shift in how we author and consume media as an online, electronic transmission effectively resituates the writing process across the liberal arts as less a solitary act of individual enquiry and reflection, and more an ongoing, collaborative process of creative interaction within a multimedia environment or network. Contributions in this anthology demonstrate a robust history and equally diverse contemporary approach to multimedia interaction for literary and artistic ends. Central to all media formats, computation is explored throughout this volume to critically examine how algorithmic procedures in writing help bring forward many key concepts to building creative communities in a digital environment. Each chapter in this book accordingly introduces readers to various new collaborative experiments using a broad range of different digital media formats, including VR, Natural Language Generation (NLG), and metagaming tools. This book will appeal broadly to students, instructors, and independent artists working in the digital arts, while its emphasis on social interactivity will interest theorists and teachers working in theatre, social media, and cyberpsychology. Its secondary focus on computation and media programming as a site of artistic experimentation will also interest programmers and web designers at various professional levels.
