*The Moving City* Rashmi Sadana,2021-12-07 The Moving City is a rich and intimate account of urban transformation told through the story of Delhi's Metro, a massive infrastructure project that is reshaping the city's social and urban landscapes. Ethnographic vignettes introduce the feel and form of the Metro and let readers experience the city, scene by scene, stop by stop, as if they, too, have come along for the ride. Laying bare the radical possibilities and concretized inequalities of the Metro, and how people live with and through its built environment, this is a story of women and men on the move, the nature of Indian aspiration, and what it takes morally and materially to sustain urban life. Through exquisite prose, Rashmi Sadana transports the reader to a city shaped by both its Metro and those who depend on it, revealing a perspective on Delhi unlike any other.

### **Delhi Metro Rail Corporation's Communication with the Media**

Meenakshi Sharma, 2012

#### Delhi Metro Rail Corporations Communication with the Media

Meenaxi Sharma, 2012 As a new corporation, the Delhi Metro (DMRC) began its relationship with the media, with a clean slate, and its care with the public relations function made for the establishment of a very cordial relationship with the print media and led to positive image building in the public eye. However, with the rise of electronic media and the proliferating channels' greater emphasis on sensationalism, the warmth in the relations began to subside. A major standoff with the electronic media and the experience of accidents during construction of Phase II of the project, led to the restructuring of the approach to media relations as well as internal restructuring of the PR department. The challenges and major incidents turned out to be hard-learned lessons in managing the media in a dynamic environment.

### **Delhi Airport Metro Express Private Limited** G. Raghuram, 2016

Delhi Metro Airport Express Line (AEL) from New Delhi Metro Station to Dwarka Sector 21 linked the Indira Gandhi International Airport. The line was operated by the Delhi Airport Metro Express Pvt Limited (DAMEPL), a subsidiary of Reliance Infrastructure (RInfra), the concessionaire of the line. However, DAMEPL has been unable to run the AEL profitably ever since it started operations due to poor ridership and high operating costs. After three months in October 2012, with the repairs nearly completed, RInfra had to take a call on the way forward. This case outlines the options available.

**The Navigator** Geeta Saini,2023-01-14 Most of the students face problems in reading, speaking, understanding and writing English especially grammar and vocabulary. Being in the teaching profession for about 28 years, the author has seen, felt and understood the problems, which exist not only during the school years but also they accompany them to the competition and professional levels. Most of the competitive exams in our country include tough testing in English but due to the weak base the students are unable to perform well. The author has presented the gist of her classroom lectures, lessons and experiences in this book. The chapters are crafted with the educational ingredients she used in her class room teaching, hence they are student friendly and meet their requirements. The book has been designed to help the students in school as well as to provide a strong foundation to the aspirants of the various competitions, in general.

The Image of the City Kevin Lynch,1964-06-15 The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study

leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

Introduction to Autonomous Mobile Robots, second edition Roland Siegwart, Illah Reza Nourbakhsh, Davide Scaramuzza, 2011-02-18 The second edition of a comprehensive introduction to all aspects of mobile robotics, from algorithms to mechanisms. Mobile robots range from the Mars Pathfinder mission's teleoperated Sojourner to the cleaning robots in the Paris Metro. This text offers students and other interested readers an introduction to the fundamentals of mobile robotics, spanning the mechanical, motor, sensory, perceptual, and cognitive layers the field comprises. The text focuses on mobility itself, offering an overview of the mechanisms that allow a mobile robot to move through a real world environment to perform its tasks, including locomotion, sensing, localization, and motion planning. It synthesizes material from such fields as kinematics, control theory, signal analysis, computer vision, information theory, artificial intelligence, and probability theory. The book presents the techniques and technology that enable mobility in a series of interacting modules. Each chapter treats a different aspect of mobility, as the book moves from low-level to high-level details. It covers all aspects of mobile robotics, including software and hardware design considerations, related technologies, and algorithmic techniques. This second edition has been revised and updated throughout, with 130 pages of new material on such topics as locomotion, perception, localization, and planning and navigation. Problem sets have been added at the end of each chapter. Bringing together all aspects of mobile robotics into one volume, Introduction to Autonomous Mobile Robots can serve as a textbook or a working tool for beginning practitioners. Curriculum

developed by Dr. Robert King, Colorado School of Mines, and Dr. James Conrad, University of North Carolina-Charlotte, to accompany the National Instruments LabVIEW Robotics Starter Kit, are available. Included are 13 (6 by Dr. King and 7 by Dr. Conrad) laboratory exercises for using the LabVIEW Robotics Starter Kit to teach mobile robotics concepts.

**How to Lie with Maps** Mark Monmonier, 2014-12-10 Originally published to wide acclaim, this lively, cleverly illustrated essay on the use and abuse of maps teaches us how to evaluate maps critically and promotes a healthy skepticism about these easy-to-manipulate models of reality. Monmonier shows that, despite their immense value, maps lie. In fact, they must. The second edition is updated with the addition of two new chapters, 10 color plates, and a new foreword by renowned geographer H. J. de Blij. One new chapter examines the role of national interest and cultural values in national mapping organizations, including the United States Geological Survey, while the other explores the new breed of multimedia, computer-based maps. To show how maps distort, Monmonier introduces basic principles of mapmaking, gives entertaining examples of the misuse of maps in situations from zoning disputes to census reports, and covers all the typical kinds of distortions from deliberate oversimplifications to the misleading use of color. Professor Monmonier himself knows how to gain our attention; it is not in fact the lies in maps but their truth, if always approximate and incomplete, that he wants us to admire and use, even to draw for ourselves on the facile screen. His is an artful and funny book, which like any good map, packs plenty in little space.—Scientific American A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called.

It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way. For that alone, it seems worthwhile.—Christopher Lehmann-Haupt, *The New York Times* . . . witty examination of how and why maps lie. [The book] conveys an important message about how statistics of any kind can be manipulated. But it also communicates much of the challenge, aesthetic appeal, and sheer fun of maps. Even those who hated geography in grammar school might well find a new enthusiasm for the subject after reading Monmonier's lively and surprising book.—Wilson Library Bulletin A reading of this book will leave you much better defended against cheap atlases, shoddy journalism, unscrupulous advertisers, predatory special-interest groups, and others who may use or abuse maps at your expense.—John Van Pelt, *Christian Science Monitor* Monmonier meets his goal admirably. . . . [His] book should be put on every map user's 'must read' list. It is informative and readable . . . a big step forward in helping us to understand how maps can mislead their readers.—Jeffrey S. Murray, *Canadian Geographic*
