Healing Young Brains Robert W. Hill, Eduardo Castro, 2009-04-14 Neurofeedback is a scientifically proven form of brainwave feedback that trains the child's brain to overcome slow brainwave activity, and increase and maintain its speed permanently. Neurofeedback is quick, noninvasive and cost effective. In fact, 80 percent of the time, neurofeedback is effective without any of the side effects associated with drugs commonly used to such childhood disorders as autism, ADHD, dyslexia, sleep disorders, and emotional problems. Healing young Brains examines each disorder separately and explains in lay terms: the manifestation of the disorder, the diagnosis, and the rationale for treating the disorder with brainwave training. Healing Young Brains is parents guide to all they need to know about treating their children with neurofeedback as an alternative to drugs.

Biofeedback for the Brain Paul G. Swingle, 2008 Neurofeedback is a cutting-edge, drug-free therapeutic technique used by over a thousand licensed therapists in North America to treat a range of conditions from attention deficit and hyperactivity disorders to epilepsy, stroke, anxiety, migraine, and depression. First popularized in the 1970s, this naturalistic method is based on the idea that we can control our brain activity and that, through training, the brain can learn to modify its own electrical patterns for more efficient processing or to overcome various states of dysfunction. In *Biofeedback for the Brain*, Dr. Paul G. Swingle describes in clear and coherent language how these procedures work. With numerous actual case examples, readers follow the progress of clients from the initial brain map that shows the location and severity of the neurological abnormalities to the various stages of treatment. Conditions often considered untreatable by conventional health practitioners respond positively to neurotherapeutic treatment and Swingle describes many of these remarkable recoveries. Other chapters describe the use of neurotherapy for a variety of surprising purposes, including performance training for elite athletes, of which the most famous example is the Italian soccer team who considered the technique to be their secret weapon in attaining a World Cup victory. Despite wide-ranging success stories and the endorsement of the American Psychological Association, many health care practitioners remain skeptical of neurofeedback and the procedures are still not well-known by the public or conventional health care providers. This book provides a thorough, definitive, and highly readable presentation of this remarkable health care alternative that offers millions of individuals a chance for healing.

Clinical Neurotherapy Emily Stevens,2013-10-18 Depression continues to be on the increase in the United States and worldwide, according to current statistics, which supports the need to expand potential treatment options beyond psychotropic medications. Psychotropic medications are still the primary approach to treatment and considered best practice in the medical community for mood disorders; however, studies show limited response rates to medication in participants but a high placebo response rate. This chapter explores the use of various brain-based treatment modalities and technologies for the treatment of mood disorders. Neurofeedback, auditory visual stimulation, cranial electrostimulation, transcranial magnetic stimulation and vagus nerve stimulation studies for the treatment of depression were all reviewed to evaluate their efficacy. The studies reviewed show that all modalities have their strengths and weaknesses, but should be considered viable treatment modalities to improve symptoms of depression.

Neurotherapy and Neurofeedback Theodore J. Chapin,Lori A. Russell-Chapin,2013-12-04 The fields of neurobiology and neuropsychology are growing rapidly, and neuroscientists now understand that the human brain has the capability to adapt and develop new living neurons by engaging new tasks and challenges throughout our lives, essentially allowing the brain to rewire itself. In Neurotherapy and Neurofeedback, accomplished clinicians and scholars Lori Russell-Chapin and Ted Chapin illustrate the importance of these advances and introduce counselors to the growing body of research demonstrating that the brain can be taught to self-regulate and become more efficient through neurofeedback (NF), a type of biofeedback for the brain. Students and clinicians will come away from this book with a strong sense of how brain dysregulation occurs and what kinds of interventions clinicians can use when counseling and medication prove insufficient for treating behavioral and psychological symptoms.
