Assessment of Agent Monitoring Strategies for the Blue Grass and Pueblo Chemical Agent Destruction Pilot Plants

National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Assessment of Agent Monitoring Strategies for the Blue Grass and Pueblo Chemical Agent Destruction Pilot Plants, 2012-10-21 January 2012 saw the completion of the U.S. Army's Chemical Materials Agency's (CMA's) task to destroy 90 percent of the nation's stockpile of chemical weapons. CMA completed destruction of the chemical agents and associated weapons deployed overseas, which were transported to Johnston Atoll, southwest of Hawaii, and demilitarized there. The remaining 10 percent of the nation's chemical weapons stockpile is stored at two continental U.S. depots, in Lexington, Kentucky, and Pueblo, Colorado. Their destruction has been assigned to a separate U.S. Army organization, the Assembled Chemical Weapons Alternatives (ACWA) Element. ACWA is currently constructing the last two chemical weapons disposal facilities, the Pueblo and Blue Grass Chemical Agent Destruction Pilot Plants (denoted PCAPP and BGCAPP), with weapons destruction activities scheduled to start in 2015 and 2020, respectively. ACWA is charged with destroying the mustard agent stockpile at Pueblo and the nerve and mustard agent stockpile at Blue Grass without using the multiple incinerators and furnaces used at the five CMA demilitarization plants that dealt with assembled chemical weapons - munitions containing both chemical agents and explosive/propulsive components. The two ACWA demilitarization facilities are congressionally mandated to employ noncombustion-based chemical neutralization processes to destroy chemical agents. In order to safely operate its disposal plants, CMA developed methods and procedures to monitor chemical agent contamination of both secondary waste materials and plant structural components. ACWA currently plans to adopt these methods and procedures for use at these facilities. The Assessment of Agent Monitoring Strategies for the Blue Grass and Pueblo Chemical Agent Destruction Pilot Plants report also develops and describes a half-dozen scenarios involving prospective ACWA secondary waste characterization, process equipment maintenance and changeover activities, and closure agent decontamination challenges, where direct, real-time agent contamination measurements on surfaces or in porous bulk materials might allow more efficient and possibly safer operations if suitable analytical technology is available and affordable.

Konkani Ramesh Vaman Dhongde, 2022-11-15 Konkani is a modern Indo-Aryan language and a state language of the Indian state Goa. Until recently, it was considered a dialect of Marathi, but it is now considered an independent language. Konkani has several varieties, including the Manglore variety spoken in the south of Goa, the Gawdi variety spoken by the Gawda ethnic group, and the Goan (Panaji) variety. The latter is the focus of this description, and is the variety used in schools, media and state administration. The book provides a descriptive linguistic analysis of Konkani based on spoken and written data collected by the author during extensive fieldwork. The linguistic features of Konkani phonology, morphology, word-formation and syntax are described in detail, and where significant, compared with the Manglore and Gawdi varieties. Since Konkani is undergoing standardisation, and since it has close contact with Marathi, significant similarities and differences between the two languages are also discussed. Konkani has the honour of being the subject of the oldest European grammatical work on any Indian language: Thomas Stephens' *Arte da Lingoa Canarim* published in 1640. This grammar is thus the most recent addition to the long tradition of Konkani grammars.

Wheat Crop Management N.R. Das, 2008-10-01 Wheat, the second cereal crop, is very important in India, because it is the staple food of most of the people of northern, western and central India, where winter is long or medium in duration. Now, with the arrival of dwarf wheat, it is grown in eastern parts of India also, where winter duration is short. Though huge amount of research works, on different aspects, are being done in different parts of the country, but management oriented book on wheat, is rare. Therefore, on management view points, the book entitled, 'Wheat Crop Management' has been written in 17 chapters covering new strategies for wheat production improvements. Besides this, 138 tables and 22 figures, have been added to it. This book will be useful to both the undergraduate and postgraduate students of Agronomy of all the agricultural colleges/universities. This book will also be useful for students, Research Institutes run by ICAR, Students of the agricultural training centres for references.

Mr. Rohit Manglik, Mr. Kaushalesh Dwivedi, 2022-08-04 With the NEP 2020 and expansion of research and knowledge has changed the face of education to a great extent. In the Modern times, education is not just constricted to the lecture method but also includes a practical knowledge of certain subjects. This way of education helps a student to grasp the basic concepts and principles. Thus, trying to break the stereotype that subjects like Physics, Chemistry and Biology means studying lengthy formulas, complex structures, and handling complicated instruments, we are trying to make education easy, fun, and enjoyable.
