Practical Industrial Data Networks Steve Mackay, Edwin Wright, Deon Reynders, John Park, 2004-02-27 There are many data communications titles covering design, installation, etc, but almost none that specifically focus on industrial networks, which are an essential part of the day-to-day work of industrial control systems engineers, and the main focus of an increasingly large group of network specialists. The focus of this book makes it uniquely relevant to control engineers and network designers working in this area. The industrial application of networking is explored in terms of design, installation and troubleshooting, building the skills required to identify, prevent and fix common industrial data communications problems - both at the design stage and in the maintenance phase. The focus of this book is 'outside the box'. The emphasis goes beyond typical communications issues and theory to provide the necessary toolkit of knowledge to solve industrial communications problems covering RS-232, RS-485, Modbus, Fieldbus, DeviceNet, Ethernet and TCP/IP. The idea of the book is that in reading it you should be able to walk onto your plant, or facility, and troubleshoot and fix communications problems as quickly as possible. This book is the only title that addresses the nuts-and-bolts issues involved in design, installation and troubleshooting that are the day-to-day concern of engineers and network specialists working in industry. * Provides a unique focus on the industrial application of data networks * Emphasis goes beyond typical communications issues and theory to provide the necessary toolkit of knowledge to solve industrial communications problems * Provides the tools to allow engineers in various plants or facilities to troubleshoot and fix communications problems as quickly as possible

The remaining chapters describe each separate sensor technology in detail. These include resistive sensors, cable extension transducers, capacitive sensors, inductive sensors, LVDT and RVDT sensors, distributed impedance sensors, Hall effect sensors, magnetoresistive sensors, magnetostrictive sensors, linear and rotary encoders, optical triangulation position sensors, and ultrasonic position sensors. Presents sensor specification, theory of operation, sensor design, and application criteria Reviews the background history of position sensors as well as the underlying engineering techniques Includes end-of-chapter exercises Understanding Position Sensors is written for electrical, mechanical, and material engineers, as well as for engineering students who are interested in understanding sensor technologies, and can be used as a textbook for an engineering course on sensor technology.

Patent Management and Valuation Grid Thoma, 2016-06-23 Research on patent valuation has become increasingly important in academic and policy circles in the last few decades. In part, this is the outcome of the wide consensus that innovation is a crucial ingredient for growth at various levels. On the other hand, there has also been an overcoming of growth models unilaterally focused on technological-oriented approaches. This book presents novel and original research on patent value determinants, which are intrinsic or extrinsic to the innovator's business model. Grid Thoma has undertaken a long study on the strategic factors affecting patent valuation, bringing extensive quantitative evidences across various geographical and institutional contexts. Beforehand, the valuation of the patent real options is appraised when the innovator can postpone the additional investment required for the patent's successful exploitation. Then, he analyses what other complementary IP strategies are combined with patenting that in turn directly affect the value of patents. Moreover, the book scrutinizes the so-called 'strategic patenting' hypothesis according to which innovators obtain patents for other reasons beyond gaining IP protection. A second order of strategic factors affecting the value of patents resides at the outset of the invention process. These are constituted by knowledge spillovers, which are typically mediated by the local geographical context where the invention process takes place. The analysis shows that the contribution of knowledge spillovers from business and nonbusiness organizations to the value of the patented R&D constitutes a relevant aspect for an innovator's decision making. This thoughtful, cutting-edge research book is vital reading for researchers, academics, and policy decision makers in the area of in market valuation, management of technology, innovation management, and economic geography.

Industry 4.0, China 2025, IoT Wolfgang Babel, 2022-11-02 The book gives an overview about automation technology over the last 50 years, based on my own experiences. In the same way it is shown the history of field device out from laboratory into the field with all difficulties and benefits of that transition. The issues are summarized in a pyramid of complexity. Requirements for robustness and safety are shown for field devices. In the same way it is shown the development of mainframes, workstations and PC's. SAP a leading ERP System is explained in more detail. Specially it is figured out how SAP works and what has to be considered in working with such kind of system. The differences between MES- and ERP-systems are discussed, specially also for future combined SAP/MES systems. Explained are the problems of midsized companies (SMEs) in dealing with Industry 4.0 and automation. Further examples are given and discussed for automated quality control in automotive, PCB-handling, CIGS (Solar cell)-production. Also shown is the upgrade for older products and make them ready for automation standards. In detail the history of the modern robotics is shown for the automotive industry. In summary also is figured out the Industry 5.0 which is just coming up more and more.
