101 Tips for Improving Your Blood Sugar University of New Mexico. Diabetes Care Group,1999 Provides answers to over one hundred questions people have about managing their diabetes and reducing the risks associated with high or low blood sugar.

The Diabetes 2-Month Turnaround Laura Hieronymus, Stacy Griffin, 2017-04-11 Most people who have just been diagnosed with diabetes, or who are suffering complications for the first time, are motivated to start taking better care of themselves. The problem is that change can be overwhelming or hard to maintain. What they need is a course correction that's simple, straightforward, and achievable. The Diabetes 2-Month Turnaround, is the blueprint they need for getting their self-management back in shape safely, quickly, and effectively. Using years of behavioral research, Dr. Laura Hieronymous has created a complete 2-month program for people with diabetes who need to get their glucose under control, now and for the long term. Using a week-by-week approach, the books is a total health overhaul that covers

everything from medications and supplies to nutrition and exercise. Perfect for those who were just diagnosed or those who have had diabetes for a number of years and simply need to tighten self-care, this simple, effective program is the perfect way to get back in shape.

Insulin Resistance & Diabetes 101 Jimmy Cooper, 2017-02-21 This book contains everything there is to know about Diabetes, Insulin Resistance, and how you can turn your life around if you or a loved one suffers from it. Insulin is a hormone produced by the pancreas that helps unlock the body's cells so that sugar (glucose) from the food we eat can be used by the cells for energy. In people with type 2 diabetes, a combination of problems occurs, and scientists aren't really sure which is the chicken and which is the egg. The person's body may not be producing enough insulin to meet their needs, so some glucose can't get into the cells. Glucose remains in the bloodstream, causing high blood glucose levels. In many cases, the person may actually be producing more insulin than one might reasonably expect that person to need to convert the amount of food they've eaten at a meal into energy. Their pancreas is actually working overtime to produce more insulin because the body's cells are resistant to the effects of insulin. Basically the cells, despite the presence of insulin in the bloodstream, don't become unlocked and don't let enough of the glucose in the blood into the cells. Scientists don't know exactly what causes this insulin resistance, and many expect that there are several different defects in the process of

unlocking cells that cause insulin resistance. Medications for type 2 diabetes focus on different paths of this insulin-cell interaction to help improve blood glucose control. Some medications stimulate the pancreas to produce more insulin. Others improve how the body uses insulin by working on this insulin resistance. Physical activity also seems to improve the body's ability to use insulin by decreasing insulin resistance, which is why activity is so important in diabetes management. Topics that are covered in this book include: What is Insulin Resistance? Common facts and misconceptions about Diabetes Creating a schedule with Diabetes Getting the medical attention and care that you need A Few recipes to try at home And much more... Do yourself a favor, and see everything that this read has to offer!

Diabetes 101 Cathy Harris,2014-01-06 This book will educate you on why there are so many people in this country dying, going blind or losing limbs to diabetes?Diabetes is a lifelong manageable disease that can be controlled and the goal is not to let it control you. Diabetes is not and should not be a death sentence for anyone, however, due to the lack of information and education, many people do die from the disease. It is after all the third largest killer in the U.S. and the NUMBER ONE killer of African Americans!According to the Centers for Disease Control (CDC.gov), over 40% of people today or millions of people are walking around with diabetes already ravaging their bodies. Many people are misdiagnosed with diabetes because again it is one of the diseases that is extremely hard to recognize or diagnose.Diabetes is sometimes not detected until something terrible happens such as a heart attack, stroke, or kidney failure. Not only is it extremely hard to diagnosis, but the symptoms of diabetes mimics many other diseases. So finding out if you have diabetes will be key to living with the disease and managing it correctly. Good luck!
