Navigation in Oral and Maxillofacial Surgery

Seyed Alireza Parhiz,Jeffrey N. James,Shohreh Ghasemi,Mohammad Hosein Amirzade-Iranaq,2022-12-24 This book offers a comprehensive overview of the fundamentals of navigation surgery in the head and neck region. Navigation is particularly important in difficult and limited exposure areas, such as the orbit and deep spaces of the head and neck. With the aid of navigation systems, an expert can palpably and accurately measure the amount of bone removed during fracture reductions or resections of bony masses procedures. In addition to reducing surgery time for soft tissue lesions, navigation technique also allows for minimally invasive access to lesions without extensive dissection that is often required for traditional open approaches. Navigation can also be extremely helpful in locating and retrieving foreign bodies. Chapters cover navigation in a variety of different surgical specialties including, but not limited to, trauma surgery, implant surgery, and orthogenetic surgery. Chapters also discuss surgical pathology as well as guided surgeries. The book features detailed case presentations for each surgery sub-topic and discusses future advances in the field that are currently in development. Navigation in Oral & Maxillofacial Surgery is a must-have resource for clinicians, professionals, and practitioners in the fields of oral & maxillofacial surgery, otorhinolaryngology-head & neck surgery, trauma surgery, and plastic surgery, as well as researchers and postgraduate students in related fields.

   Biomedical Visualisation Paul M. Rea,2019-07-16 This edited book explores the use of technology to enable us to visualise the life sciences in a more meaningful and engaging way. It will enable those interested in visualisation techniques to gain a better understanding of the applications that can be used in visualisation, imaging and analysis, education, engagement and training. The reader will be able to explore the utilisation of technologies from a number of fields to enable an engaging and meaningful visual representation of the biomedical sciences. This use of technology-enhanced learning will be of benefit for the learner, trainer and faculty, in patient care and the wider field of education and engagement. This second volume on Biomedical Visualisation will explore the use of a variety of visualisation techniques to enhance our understanding of how to visualise the body, its processes and apply it to a real world context. It is divided into three broad categories – Education; Craniofacial Anatomy and Applications and finally Visual Perception and Data Visualization. In the first four chapters, it provides a detailed account of the history of the development of 3D resources for visualisation.

Following on from this will be three major case
studies which examine a variety of educational
perspectives in the creation of resources. One
centres around neuropsychiatric education, one is
based on gaming technology and its application in
a university biology curriculum, and the last of
these chapters examines how ultrasound can be used
in the modern day anatomical curriculum. The next
three chapters focus on a complex area of anatomy,
and helps to create an engaging resource of
materials focussed on craniofacial anatomy and
applications. The first of these chapters examines
how skulls can be digitised in the creation of an
educational and training package, with excellent
hints and tips. The second of these chapters has a
real-world application related to forensic anatomy
which examines skulls and soft tissue landmarks in
the creation of a database for Cretan skulls,
comparing it to international populations. The
last three chapters present technical perspetives
on visual perception and visualisation. By
detailing visual perception, visual analytics and
examination of multi-modal, multi-parametric data,
these chapters help to understand the true
scientific meaning of visualisation. The work
presented here can be accessed by a wide range of
users from faculty and students involved in the
design and development of these processes, to
those developing tools and techniques to enable
visualisation in the sciences.
