Srihari, 2014-04-01 Computational Intelligence techniques have been widely explored in various domains including forensics. The Future of Work in Africa Jieun Choi, Mark A. Dutz, Zainab Usman, 2020-06-26 The Future of Work in Africa focuses on the key themes of creating productive jobs and addressing the needs of those left behind. It highlights how global trends, especially the adoption of digital technologies, may change the nature of work in Sub-Saharan Africa by creating new opportunities and challenges. It argues that, contrary to global fears of worker displacement by new technologies, African countries can develop an inclusive future of work, with opportunities for lower-skilled workers. Harnessing these opportunities is, however, contingent on implementing policies and making productive investments in four main areas. These are enabling inclusive digital technologies; building human capital for a young, rapidly growing, and largely low-skilled labor force; increasing the productivity of informal workers and enterprises; and extending social protection coverage to mitigate the risks associated with disruptions to labor markets. This companion report to the World Bank's World Development Report 2019 concludes with important policy questions that should guide future research, whose findings could lead to more inclusive growth for African nations.

The Consumer Spyware Industry Adam Molnar, Diarmaid Harkin, 2019-08-22 Invasive surveillance software, known as 'spyware', is presently available to general consumer audiences. A sizeable market has emerged of a number of companies who sell spyware targeted at consumers who wish to place a smartphone or personal computer under intensive monitoring. This research focused exclusively on smartphones and discovered that it is relatively easy to purchase software that can remotely collect text messages, phone conversation recordings, GPS location data, and access the camera of a targeted device. Crucially, this data can be collected 'by stealth' with the user of the device having no indicators that their privacy is being compromised.

Phantom Self David Icke, 2016 The vast majority of us unknowingly suffer from a slave mentality. We constantly

experience the psychological phenomena of cognitive dissonance, where our beliefs and behaviour are in conflict, and Stockholm syndrome - the traumatic bonding with a captor. Our ability to decode reality is linked to what we are able to perceive. Icke believes our reality has been hijacked by an invisible force the Gnostics used to call Archons. He maintains that we are headed towards a cashless world and human settlements which are projected as local community initiatives but are actually centralized systems of control. Our health is being systematically weakened: if you are sick, you are easier to control. Ickes dystopian view of the future assumes that the masses will stay glued to their TVs, locked forever into the hive mind of the Matrix, which says I have no power. Can humanity break free? Through truth and love we can become who and what we really are.

Flight of the Serpent Val Davis,1998 Nick Scott is back in the desert, this time leading a university-funded dig of her own in a ghost town near Boot Hill in Arizona. Walking into a canyon in search of cave-dwelling ruins left by ancient Anasazi, Nick hears the unmistakable sound of helicopters right before stumbling across the downed wreckage of what was once the plane of reporter Matt Gault. Joining forces with John Gault, Matt's grandfather, Nick quickly finds herself taken from the world of academic archeology into a world of government subterfuge and murder. Swept up in the mystery, and determined to uncover the truth, Nick and Gault call together the crew of a WW II B-24 Liberator for one last mission under the blazing skies of the Arizona sun.
