Bioactive Heterocycles VI Noboru Motohashi,2008-07-02 Heterocyclic chemistry is the biggest branch of chemistry covering two-thirds of the chemical literature and this book covers the hot topics of frontier research summarized by reputed scientists in the field.

Buried in the Borderlands: An Artefact Typology and Chronology for the Netherlands in the Early Medieval Period on the Basis of Funerary Archaeology Tim van Tongeren,2024-01-11 This book is the result of a large-scale yet detailed study of early medieval grave furnishings from the Netherlands, aiming at the creation of a comprehensive artefact typology and updated relative chronology for this under-explored period in the Low Countries.

Comprehensive Biotechnology ,2011-08-26 The second edition of Comprehensive Biotechnology, Six Volume Set continues the tradition of the first inclusive work on this dynamic field with up-to-date and essential entries on the principles and practice of biotechnology. The integration of the latest relevant science and industry practice with fundamental biotechnology concepts is presented with entries from internationally recognized world leaders in their given fields. With two volumes covering basic fundamentals, and four volumes of applications, from environmental biotechnology and safety to medical biotechnology and healthcare, this work serves the needs of newcomers as well as established experts combining the latest relevant science and industry practice in a manageable format. It is a multi-authored work, written by experts and vetted by a prestigious advisory board and group of volume editors who are biotechnology innovators and educators with international influence. All six volumes are published at the same time, not as a series; this is not a conventional encyclopedia but a symbiotic integration of brief articles on established topics and longer chapters on new emerging areas. Hyperlinks provide sources of extensive additional related information; material authored and edited by world-renown experts in all aspects of the broad multidisciplinary field of biotechnology Scope and nature of the work are vetted by a prestigious International Advisory Board including three Nobel laureates Each article carries a glossary and a professional summary of the authors indicating their appropriate credentials An extensive index for the entire publication gives a complete list of the many topics treated in the increasingly expanding field

Coinage And History in the North Sea World, C. AD 500-1250 Barrie J. Cook,Gareth Williams,Marion Archibald,2006 This themed volume contains 28 papers by leading authorities on numismatics and monetary history. It covers a variety of topics concerning the design, use and circulation of coinage in northern Europe in the late fifth to early thirteenth centuries.

Protostellar Jets in Context Kanaris Tsinganos,Tom Ray,Matthias Stute,2009-09-24 It is over a quarter of a century since the discovery of outflows from young stars. The intervening years have led to remarkable advances in our understanding of this phenomenon. Much of the progress can be attributed to advances in facilities and technologies, including not only larger telescopes but also improved instrument and detector performance. In addition protostellar outflows have now been imaged from the ground and space at high spatial resolution, e. g. with HST, and at a wide variety of wavelengths from X-rays to radio waves, revealing more and more about their physics. This veritable revolution in observation has been accompanied by an exponential growth in our ability to numerically simulate the launching and propagation of jets. Codes continue to improve: they now incorporate more physics and are increasingly efficient through, for example, techniques such as adaptive mesh refinement and the use of parallel processing in cluster environments. Simulating the launching and propagation of a jet all the way from the vicinity of the star up to 4 several thousand AU (a size range of 10^4) is now much closer. In more recent times, developments in observation, theory and numerical simulation have been joined by laboratory jet experiments reproducing, on centimetre scales, that which is seen in astrophysics to stretch for several parsecs.

The Intervertebral Disc Irving M. Shapiro,Makarand V. Risbud,2013-09-02 The intervertebral disc is a complex structure that separates opposing vertebrae, permits a wide range of motion, and accommodates high biomechanical forces. Disc degeneration leads to a loss of function and is often associated with excruciating pain. Written by leading scientists and clinicians, the first part of the book provides a review of the basic biology of the disc in health and disease. The second part considers strategies to mitigate the effects of disc degeneration and discusses the possibility of engineering replacement tissues. The final section is devoted to approaches to model normal development and elucidate the pathogenesis of degenerative disc disease using animal, organ and cell culture techniques. The book bridges the gap between the basic and clinical sciences; the target audience includes basic scientists, orthopaedists and neurologists, while at the same time appealing to the needs of graduate students, medical students, interns and fellows.

Pediatric Neuro-Ophthalmology Michael C. Brodsky,Robert S. Baker,Latif M. Hamed,2012-12-06 Pediatric Neuroophthalmology details the diagnostic criteria, current concepts of pathogenesis, neuroradiological correlates, and clinical management of a large group of neuroophthalmic disorders that present in childhood. Surprisingly distinct from neuroophthalmic disorders afflicting adults, this set of diseases falls between the cracks of most ophthalmology training, and thus, warrants a practical, clinical guide for the practitioner in ophthalmology - the neuroophthalmologist, pediatric ophthalmologist, general ophthalmologist - as well as neurologists and for residents. The authors, leading pediatric ophthalmologists, have taken this difficult subject matter and developed an accessible, user-friendly manual with a detailed approach to the recognition, differential diagnosis, and management of pediatric neuroophthalmologic disorders.

Handbook of Forensic Medicine Burkhard Madea,2014-03-17 Forensic Medicine encompasses all areas in which medicine and law interact. This book covers diverse aspects of forensic medicine including forensic pathology, traumatology and violent death, sudden and unexpected death, clinical forensic medicine, toxicology, traffic medicine, identification, haemogenetics and medical law. A knowledge of all these subdisciplines is necessary in

order to solve routine as well as more unusual cases. Taking a comprehensive approach the book moves beyond a focus on forensic pathology to include clinical forensic medicine and forensic toxicology. All aspects of forensic medicine are covered to meet the specialist needs of daily casework. Aspects of routine analysis and quality control are addressed in each chapter. The book provides coverage of the latest developments in forensic molecular biology, forensic toxicology, molecular pathology and immunohistochemistry. A must-have reference for every specialist in the field this book is set to become the bench-mark for the international forensic medical community.

Surgical anatomy of the lateral transpsoas approach to the lumbar spine E-Book R. Shane Tubbs, Rod J. Oskouian, Jr., Joe Iwanaga, Marc Moisi, 2019-11-20 Surgical anatomy of the lateral transpsoas approach to the lumbar spine E-Book

The Labyrinth of Star Formation Dimitris Stamatellos, Simon Goodwin, Derek Ward-Thompson, 2014-04-03 This volume contains the proceedings from the conference The Labyrinth of Star Formation that was held in Crete, Greece, in June 2012, to honour the contributions to the study of star formation made by Professor Anthony Whitworth of Cardiff University. The book covers many aspects of theoretical and observational star formation: low-mass star formation; young circumstellar discs; computational methods; triggered star formation; the stellar initial mass function; high-mass star formation and stellar clusters. Each section starts with a review paper, followed by papers discussing recent theoretical and observational work. This volume summarises our current understanding of star formation and is useful for both graduate students and researchers alike.

The Design and Construction of Ships Sir John Harvard Biles, 1911

Perimetry Update 1996/1997 Michael Wall, 1997

Pathology of the Eye G.O.H. Naumann, D.J. Apple, 2012-12-06 It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology. Not since the three volumes of the Henke-Lubarsch handbook appeared forty years ago has anything like this come on the market. This book represents a comprehensive, thorough and up-to-date clinically oriented textbook on ocular pathology. We are all indebted to the senior author, who is now professor of ophthalmology at the University of Erlangen, who presents us here with the fruit of decades of industrious endeavors. We also have to be grateful to the American ophthalmic pathologist, Dr. David Apple, who, as one of the main collaborators of the German edition, has now provided us with the English translation. The book has a twofold purpose: First, it is meant to be a source of instruction for ophthalmologists and pathologists. For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures. Most valuable from a didactic point of view are the colored schematic drawings and the many tables. These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology.
