ICD-10-CM Official Guidelines for Coding and Reporting - FY 2021 (October 1, 2020 - September 30, 2021)
Department Of Health And Human Services, 2020-09-06 These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and

Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

International Statistical Classification of Diseases and Related Health Problems World Health Organization, 2012-01-16 This new edition of WHO's International Classification of Diseases, 10th Revision (ICD-10) has been fully updated for the third time. In addition, the numbering system has changed and now clearly indicates the year that the updates were incorporated. Changes in this new edition include for Volume 1 extensive corrections for Lymphomas and Leukaemias in the neoplasms chapter, clarification and added details for some maternal conditions and various edits. For Volume 2, main changes include clarification of definitions and rules around maternal cases, causes of pneumonia and extensive editing of the unchanged rules for coding neoplasms in causes of death. For Volume 3, all the new terms and changes made in Volume 1 have been reflected. The ICD is the international standard diagnostic classification for all general epidemiological purposes, many health management purposes and clinical use. These include analysis of the general health situation of population groups and monitoring the incidence and prevalence of diseases, as well as other health problems with respect to variables such as the characteristics and circumstances of the individuals affected, reimbursement, case-mix, resource allocation, quality, patient safety, and guidelines. ICD is used for health information purposes in public health, primary, secondary and tertiary care settings. In particular, it is used to classify diseases, accidents, reasons for encounter, and other health problems recorded on many types of health and vital records including death certificates and health records. The records form the basis for compiling national mortality and morbidity statistics by WHO Member States.

ICD-10-CM Official Guidelines for Coding and Reporting - Fy 2016 Centers for Medicare & Medicaid S. (Cms), The National Center for Health S (Nchs), 2015-10-08 The Centers for Medicare and Medicaid Services (CMS) and the National Center for Health Statistics (NCHS), two departments within the U.S. Federal Government's Department of Health and Human Services (DHHS) provide the following guidelines for coding and reporting using the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM). These guidelines should be used as a companion document to the official version of the ICD-10- CM as published on the NCHS website. The ICD-10-CM is a morbidity classification published by the United States for classifying diagnoses and reason for visits in all health care settings. The ICD-10-CM is based on the ICD-10, the statistical classification of disease published by

the World Health Organization (WHO). These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS.

PRINCIPLES and PRACTICE of ICD-10 CODING Dharendra Verma, Ali Mohamed El-Sayed, 2008 The traditional emphasis in medical records management around the world has been on what data to get, and not on how to get it. The more efficient health information systems of today, however, are interested in what data to get, how to get it, and how to synthesize these data into an understanding of the patient's total situation. Disease classification and coding is the principal tool used by medical records personnel to accomplish this, and is, therefore a skill, which the effective healthcare managers, medical records administrators, clinical statisticians, statistical technicians, and medical transcriptionists also must master. This book is designed to present the principles that will help the learner to acquire or improve that skill. The roots of the book go back to the teaching of ICD coding to doctors, medical records personnel and statistical technicians at the Department of Statistics & Medical Records, Ministry of Health, Kuwait for over two decades. While teaching the principles and techniques of disease coding through various revisions of the ICD we came across many areas which were not within easy reach of our students, leading to frustration among them. This led us to bring out this comprehensive guidebook on ICD-10 coding with detailed explanations, suitable examples and appropriate coding exercises for better comprehension. The book is divided into eight units. Unit 1 provides an introduction to disease coding. Unit 2 gives a brief history of the development of ICD. Units 3 and 4 deal with the main classification and alphabetic index of ICD-10. Unit 5 explains the principles and techniques of using ICD-10 and Unit 6 does this on a chapter-by-chapter basis. Units 7 and 8 consider the special features of morbidity and mortality coding. Unit 9 emphasizes the various aspects of statistical presentation in accordance with the WHO regulations. Care has been taken all through these units to keep the matter as simple as possible. Appropriate examples are provided wherever needed. Suitable exercises are presented at the end of each unit, which the students can take to test their level of comprehension before embarking on to the next unit. Many people have contributed to this final product. Of these, special mention should be made of Dr. Abdul Aziz Khalaf, Director of Statistics & Medical Records Department at the Ministry of Health, Kuwait for his continuous support and encouragement. We are deeply indebted to Miss Zahra Awadh who reviewed most of the chapters and made many helpful contributions to both style and content; and to Mr. Mohamed Bader and Mrs. Jaya Umaputhiran for secretarial assistance. We are especially grateful to hundreds of doctors, medical records administrators and technicians, health statisticians, and ICD coders who participated in our training programmes and workshops on ICD in Kuwait and other countries during the past 25 years. We trust that these many colleagues will find our account of some small value.

Advanced ICD-10 for Physicians Including Worker's Compensation and Personal Injury Eugene Fukumoto, 2017-07-28 ICD-10 is the 10th revision of the International Statistical Classification of Diseases and Related Health Problems (ICD), a medical classification list by the World Health Organization. It contains codes for diseases, signs and symptoms, abnormal findings, complaints, social circumstances, and external causes of injury of diseases. The code set allows more than 14,000 different codes and permits the tracking of many new diagnoses. The U.S. has used ICD-10-CM (Clinical Modification) since October, 2015. This national variant of ICD-10 was provided by the Centers for Medicare and Medicaid Services (CMS) and the National Center for Health Statistics, and the use of ICD-10-CM codes are now mandated for all inpatient medical reporting requirements. This book is for physicians, practice managers and all others who need learn ICD-10. It's designed for the clinician to learn how to put their diagnosis into a code and not rely on staff or computer software programs to decide it form them. ICD-10 is a complex system of coding and Medicare and third party insurers have been lenient giving providers a year to get used to the coding system. As a result, physicians and their staff have become very complacent regarding proper coding. However, Medicare and third party insurers will soon begin to deny claims which are not coded correctly, which in turn will cost physician groups time and money. This book focuses on Worker's Compensation and Personal Injury, a very large segment of the healthcare industry and is a new area to ICD-10. The diagnosis coding for injuries is much different than for Medicare or group insurance and unless the physicians and their staff learn how to use it properly, they risk losing income for themselves and worse, they risk losing the case for the patient.
