The Routledge International Handbook of Learning with Technology in Early Childhood Natalia Kucirkova,Jennifer Rowsell,Garry Falloon,2019-03-04 The Routledge International Handbook of Learning with Technology in Early Childhood focuses specifically on the most cutting-edge, innovative and international approaches in the study of children's use of and learning with digital technologies. This edited volume is a comprehensive survey of methods in children's technologies and contains a rich repertoire of studies from diverse fields and research, including both educational and developmental psychology, post-humanist literacy, applied linguistics, language and phenomenology and narrative approaches. For ease of reference, the Handbook's 28 chapters are divided into four thematic sections: introduction and opening reflections; studies answering ontological questions, which theorize how children take on original identities in becoming literate with technologies; studies answering epistemological questions, which focus on how children's knowledge and learning are (co)constructed with a diverse range of technologies; studies answering practice-related questions, which explore the resources and conditions that create the most powerful learning opportunities for children. Expertly edited, this interdisciplinary and international compendium is an ideal introduction to such a diverse, multi-faceted field.

Developments in Reinforced Plastics—4 G.

Pritchard,2012-12-06 One of the most interesting developments in composite materials technology during the past decade has been

the attempt to displace thermosetting resins from their position as the natural matrix in 'advanced' composites for such fields as aerospace. Dr McMahon gives some indication of the nature of this challenge in his chapter on fibre-reinforced thermoplastics. He acknowledges the problem of their low fibre contents, with the associated possibility of inadequate mechanical properties, especially in compression; and draws attention to the way in which the lack of suitable test methods for composites in compression has caused difficulties in assessing the latest thermoplastics composites in this respect. It is therefore of special interest that Professor Piggott deals with the whole question of compression testing of composites in Chapter 4. On the positive side, reinforced thermoplastics seem to be much more damage-tolerant than thermosets. This is clearly an advantage that will not be lost on the aircraft industry. The subject of damage repair to FRP is one of substantial concern; the wider question of defect detection and assessment is discussed authoritatively by Reifsnider and Henneke in Chapter 3, which focuses on the technique of thermography.
