Intensive Diabetes Management, 7th Edition Devin Steenkamp,2022-10-26 Intensive diabetes management is the process by which blood glucose levels are closely controlled using multiple daily insulin injections or an insulin pump. Intensive Diabetes Management is geared toward the health care practitioner who wants to implement this method in his or her patients. Now in its seventh edition, this authoritative text includes the latest advances in research and therapy. The data, guidelines, and procedures reflect the latest positions of the American Diabetes Association's standards of care. Although difficult to maintain, intensive diabetes management has proven very effective and is now the rule, rather than the exception, in diabetes care. People who use this method of diabetes management must be closely aligned with their health care team and highly motivated because it not only requires close scrutiny of blood glucose levels, but also constant monitoring of food intake and medication dosage, among other things. Virtually all patients with type 1 or type 2 diabetes can improve their glycemic control and overall health through intensive

diabetes management. Intensive Diabetes Management emphasizes a team approach to patient care and offers guidance in helping patients move toward treatment goals appropriate for their individual skills and medical condition. Individual sections address all of the key topics in intensive diabetes management, including rationale/physiological basis, team approach, education, pyschosocial issues, patient selection/goals of therapy, insulin regimens, insulin pump therapy, monitoring, and nutrition management.

Decision Support Systems in Critical Care M.Michael Shabot,Reed M. Gardner,2012-12-06 Modern critical care is characterized by the collection of large volumes of data and the making of urgent patient care decisions. The two do not necessarily go together easily. For many years the hope has been that ICU data management systems could play a meaningful role in ICU decision support. These hopes now have a basis in fact, and this book details the history, methodology, current status, and future prospects for critical care decision support systems. By focusing on real and operational systems, the book demonstrates the importance of integrating data from diverse clinical data sources; the keys to implementing clinically usable systems; the

pitfalls to avoid in implementation; and the development of effective evaluation methods.

Practical CGM Gary Scheiner,2015-05-06 Use of real-time continuous glucose monitors among people with type 1 and type 2 diabetes is growing rapidly and should continue to grow until an artificial pancreas is brought to market. Likewise, use of professional systems in healthcare practices is expanding. But, other than manufacturer instructional manuals and some book chapters on CGMs, there are no standalone publications available with concise, non-commercial instructions on CGM prescription and use. Additionally, continuous glucose monitors are too often not used to their full and proper potential. This leaves users with suboptimal glucose control and can result in system abandonment. To address this, diabetes educator and author Gary Scheiner has created Practical CGM: Improving Patient Outcomes through Continuous Glucose Monitoring to give healthcare providers the skill to make more effective use of the data generated by continuous glucose monitors, in both real-time and on a retrospective analytic basis. Using a plain-language approach and distilling content to concise, practical tips and techniques, Scheiner has created a guide that will help practitioners optimize patient use

of CGM systems and, ultimately, improve glucose control and patient health outcomes.

Emergency Alert and Warning Systems National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on the Future of Emergency Alert and Warning Systems: Research Directions,2018-04-19 Following a series of natural disasters, including Hurricane Katrina, that revealed shortcomings in the nation's ability to effectively alert populations at risk, Congress passed the Warning, Alert, and Response Network (WARN) Act in 2006. Today, new technologies such as smart phones and social media platforms offer new ways to communicate with the public, and the information ecosystem is much broader,

including additional official channels, such as government social media accounts, opt-in short message service (SMS)-based alerting systems, and reverse 911 systems; less official channels, such as main stream media outlets and weather applications on connected devices; and unofficial channels, such as first person reports via social media. Traditional media have also taken advantage of these new tools, including their own mobile applications to extend their reach of beyond broadcast radio, television, and cable. Furthermore, private companies have begun to take advantage of the large amounts of data about users they possess to detect events and provide alerts and warnings and other hazard-related information to their users. More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action. Some, but not all, of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more

effective national alert and warning system might be created and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.

Advances in Data Mining: Applications and Theoretical Aspects Petra Perner,2010-06-27 These are the proceedings of the tenth event of the Industrial Conference on Data Mining ICDM held in Berlin (www.data-mining-forum.de). For this edition the Program Committee received 175 submissions. After the pe- review process, we accepted 49 high-quality papers for oral presentation that are included in this book. The topics range from theoretical aspects of data mining to app- cations of data mining such as on multimedia data, in marketing, finance and telec- munication, in medicine and agriculture, and in process control, industry and society. Extended versions of selected papers will appear in the international journal Trans- tions on Machine Learning and Data Mining (www.ibai-publishing.org/journal/mldm). Ten papers were selected for poster presentations and are published in the ICDM Poster Proceeding Volume by ibai-publishing (www.ibai-publishing.org). In conjunction with ICDM four workshops were held on special hot applicati- oriented topics in data mining: Data Mining in Marketing

DMM, Data Mining in LifeScience DMLS, the Workshop on Case-Based Reasoning for Multimedia Data CBR-MD, and the Workshop on Data Mining in Agriculture DMA. The Workshop on Data Mining in Agriculture ran for the first time this year. All workshop papers will be published in the workshop proceedings by ibai-publishing (www.ibai-publishing.org). Selected papers of CBR-MD will be published in a special issue of the international journal Transactions on Case-Based Reasoning (www.ibai-publishing.org/journal/cbr).

   Diabetes Technology Boris Draznin,2019-06-17 We live in a century of technological revolution and the birth of artificial intelligence. Like every other sphere of our life, diabetes-related

technology is moving forward with lightning speed. New and improved insulin administration devices, increased capacity for monitoring one's blood glucose levels, and the ability to communicate directly with the device supplying insulin as well as with the patient and his/her healthcare provider have changed diabetes therapy forever. The problem is that diabetes-related technology is moving ahead much faster than physicians and other healthcare professionals can incorporate these advances into our practices. Diabetes Technology will consist of three parts: Part I addresses the clinical science of diabetes pumps, continuous glucose monitoring and communication technology with numerous practical aspects. Part III offers personal stories of healthcare providers who treat their own diabetes with modern diabetes technology. In particular, they will address how and why they decided to use this technology and the positive and negative aspects of their decision.

Exploring Intelligent Decision Support Systems Rafael Valencia-García,Mario Andrés Paredes-Valverde,María del Pilar Salas-Zárate,Giner Alor-Hernández,2018-02-07 This book presents innovative and high-quality research regarding advanced decision support systems (DSSs). Semantic Digital Libraries Sebastian Ryszard Kruk,Bill McDaniel,2008-10-08 Libraries have always been an inspiration for the standards and technologies developed by semantic web activities. However, except for the Dublin Core specification, semantic web and social networking technologies have not been widely adopted and further developed by major digital library initiatives and projects. Yet semantic technologies offer a new level of flexibility, interoperability, and relationships for digital repositories. Kruk and McDaniel present semantic web-related aspects of current digital library activities, and introduce their functionality; they show examples ranging from general architectural descriptions to detailed usages of specific ontologies, and thus stimulate the awareness of researchers, engineers, and

potential users of those technologies. Their presentation is completed by chapters on existing prototype systems such as JeromeDL, BRICKS, and Greenstone, as well as a look into the possible future of semantic digital libraries. This book is aimed at researchers and graduate students in areas like digital libraries, the semantic web, social networks, and information retrieval. This audience will benefit from detailed descriptions of both today's possibilities and also the shortcomings of applying semantic web technologies to large digital repositories of often unstructured data.
