Promising Approaches in the Prevention of Underage Drinking ,1995 This report is a product of a joint project of the National Association of Governors' Highway Safety Representatives (NAGHSR) and the National Association of State Alcohol and Drug Abuse Directors (NASADAD) focusing on state and local efforts to reduce underage drinking. Part of the project included a survey of the memberships of both NAGSHR and NASADAD designed to assess what states were doing to prevent underage drinking and to determine the extent of interagency cooperation within these efforts. The 10 case studies featured in this report were chosen from the efforts described by survey respondents to the question: Can you identify current efforts to reduce underage drinking in your state that you consider to be particularly effective or promising?

Handbook on the Neuropsychology of Aging and

Dementia Lisa D. Ravdin, Heather L. Katzen, 2012-09-14

With the aging of the baby boomers and medical advances that promote longevity, older adults are rapidly becoming the fastest growing segment of the population. As the population ages, so does the incidence of age related disorders. Many predict that 15% - 20% of the baby-boomer generation will develop some form of cognitive decline over the course of their lifetime, with estimates escalating to up to 50% in those achieving advanced age. Although much attention has been directed at Alzheimer's disease, the most common form of dementia, it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms. In fact, many patients diagnosed with Alzheimer's disease likely have co-morbid disorders that can also influence cognition (i.e., vascular cognitive impairment), suggesting mixed dementias are grossly under diagnosed. The Clinical Handbook on the Neuropsychology of Aging and Dementia is a unique work that provides clinicians with expert guidance and a hands-on approach to neuropsychological practice with older adults. The book will be divided into two sections, the first addressing special considerations for the evaluation of older adults, and the second half focusing on common referral questions likely to be encountered when working with this age group. The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics. The field of neuropsychology has played a critical role in developing methods for early identification of late life cognitive disorders as well as the differential diagnosis of dementia. Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia. Each chapter will reinforce the notion that neuropsychological measures provide the clinician with

sensitive tools to differentiate normal age-related cognitive decline from disease-associated impairment, aid in differential diagnosis of cognitive dysfunction in older adults, as well as identify cognitive deficits most likely to translate into functional impairments in everyday life.
