Driving While Black: African American Travel and the Road to Civil Rights Gretchen Sorin, 2020-02-11 Bloomberg • Best Nonfiction Books of 2020: [A] tour de force. The basis of a major PBS documentary by Ric Burns, this “excellent history” (The New Yorker) reveals how the automobile fundamentally changed African American life. Driving While Black demonstrates that the car—the ultimate symbol of independence and possibility—has always held particular importance for African Americans, allowing black families to evade the dangers presented by an entrenched racist society and to enjoy, in some measure, the freedom of the open road. Melding new archival research with her family’s story, Gretchen Sorin recovers a lost history, demonstrating how, when combined with black travel guides—including the famous Green Book—the automobile encouraged a new way of resisting oppression.

Driver Behaviour and Training: Dr. Lisa Dorn, 2017-07-05 Research on driver behaviour over the past two decades has clearly demonstrated that the goals and motivations a driver brings to the driving task are important determinants for driver behaviour. The importance of this work is underlined by statistics: WHO figures show that road accidents are predicted to be the number three cause of death and injury by 2020 (currently more than 20 million deaths and injuries p.a.). The objective of this second edition, and of the conference on which it is based, is to describe and discuss recent advances in the study of driving behaviour and driver training. It bridges the gap between practitioners in road safety, and theoreticians investigating driving behaviour, from a number of different perspectives and related disciplines. A major focus is to consider how driver training needs to be adapted, to take into account driver characteristics, goals and motivations, in order to raise awareness of how these may contribute to unsafe driving behaviour, and to go on to promote the development of driver training courses that considers all the skills that are essential for road safety. As well as setting out new approaches to driver training methodology based on many years of empirical research on driver behaviour, the contributing road safety researchers and professionals consider the impact of human factors in the design of driver training as well as the traditional skills-based approach. Readership includes road safety researchers from a variety of different academic backgrounds, senior practitioners in the field of driver training from regulatory authorities and professional driver training organizations such as the police service, and private and public sector personnel who are concerned with improving road safety.

Road Rage and Aggressive Driving Leon James, 2009-12-30 This authoritative book presents conclusions of recent studies on road rage, summarizes legislative and police initiatives, and redefines driver education for all drivers.

In the Company of Cars Dr Sarah Redshaw, 2012-10-01 It has long been accepted that the social and cultural meanings of the car far exceed the practical need for mobility. This book marks the first attempt to contribute to road safety, considering, in depth, these meanings and the cultures of driving that are shaped by them. In the Company of Cars examines the perspectives that young people have on cars, and explores the broader social and cultural meanings of the car, the potential it is supposed to fulfil, and the anticipated benefits it offers to young drivers. From focus-group research conducted in Australia, the book takes up the views of young people on a range of topics, from media to car use to gender performance. The author looks at the ways in which driving has been defined by articulations of the car that emphasize valued features of the car-driver, such as gender, youthfulness, status, age, power, raciness, sexiness, ruggedness and competitiveness. The book takes a global perspective on mobility, considering the impact of cars and road safety policy on quality of life, and the value and significance of other modes of travel, in a range of countries.

Road Rage and Aggressive Driving Dr. Leon James, Diane Nahl, 2000 This authoritative book presents conclusions of recent studies on road rage, summarizes legislative and police initiatives, and redefines driver education for all drivers.

Driver Behaviour and Accident Research Methodology Dr Anders af Wåhlberg, 2012-10-01 This book discusses several methodological problems in traffic psychology which are not currently recognized as such. Summarizing and analyzing the available research, it is found that there are a number of commonly made assumptions about the validity of methods that have little backing, and that many basic problems have not been researched at all. Suggestions are made as to further studies that should be made to address some of these problems. The book is primarily intended for traffic/transport researchers, but should also be useful for specialized education at a higher level (doctoral students and transportation specialists) as well as officials who require a good grasp of methodology to be able to evaluate research.

Advances in Traffic Psychology Dr Lisa Dorn, Dr Mark Sullman, 2012-11-01 Traffic psychology is a rapidly expanding and broad field within applied psychology with a considerable volume of research activities and a growing network of academic strands of enquiry. The discipline primarily focuses on the behaviour of road users and the psychological processes underlying these behaviours, looking at issues such as cognition, distraction, fatigue, personality and social aspects, often delivering practical applications and educational interventions. Traffic psychology has been the focus of research for almost as long as the motor car has been in existence and was first recognised as a discipline in 1990 when the International Association of Applied Psychology formed Division 13: Traffic and Transportation Psychology. The benefits of understanding traffic psychology are being increasingly recognised by a whole host of organisations keen to improve road safety or minimise health and safety risks when travelling in vehicles. The objective of this volume is to describe and discuss recent advances in the study of traffic psychology, with a major focus on how the field contributes to the understanding of at-risk road-user behaviour. The intended readerships include road-safety researchers from a variety of different academic backgrounds, senior practitioners in the field including regulatory authorities, the private and public sector personnel, and vehicle manufacturers concerned with improving road safety.

Can You Believe U.S. is Banning Texting While Driving- Spanish (Española) Dr. S. Om Goel (MD / DM USA), 2021-06-28 Please ask any medical professional. Everyone will tell you that all the researches have proved that our mind can do only one function at a time. Our mind is so fast. We believe that it can do multitasking, but it cannot. Although, you may have been driving for a few years and it becomes a routine activity for you to drive, but please realize this that, driving is the most complex activity or the most complex process of the day. The question is – “Why Driving is most complex?” The answer is that – It needs all our senses to do constant processing of our surroundings. And constantly anticipating any emergencies. Mostly 100 out of the 100 people, drives with a cell phone or mobile phone, which distracts them during driving. It can lead to very serious consequences and our life may be destroyed. Our whole life may be jeopardized in seconds. Trust me, it doesn't happen every day, but one single second is enough to jeopardize our life forever.

Handbook for the Assessment of Driving Capacity Maria T. Schultheis, John DeLuca, Douglas Chute, 2011-05-05 This is a resource for professionals involved in determining the driving capacity of individuals with neurological involvement and or trauma. While much work has been completed in this new and growing field, this is the first attempt to bring together clinical work on assessing driving capacity for different clinical populations and conditions. Specific topics include, traumatic brain injury, stroke, dementia, normal aging, medications, retraining, interventions, medical conditions, legal issues, practical issues, assessment instruments, simulators, research and epidemiology. Each chapter will address clinically relevant issues specific to the clinical population. This comprehensive compilation of driving assessment of cognitively compromised populations is the first of its kind and Dr. Schultheis is regarded as a leader in the field. *The first definitive handbook about driving assessment of cognitively impaired populations, a growing area of research *Addresses a myriad of clinical populations and conditions such as brain injured and elderly patients *Written by nationally recognized leaders in their fields of expertise

Mercenary Driver Dr. Tim Dosemagen,2018-03-09 Mercenary Driver is a masterpiece. Stunning in its simplicity, audacious in the scope of the journey, and astounding in the genius of Dosemagens rider vignettes, his sixth book is a ten-strike and a strange journey of six thousand faces, some of these noteworthy, all of them entertaining. If Mark Twain could have taken an Uber, this would be his diary. You will laugh out loud, cry just a little, and thoroughly enjoy this journey of life lessons, hilarious hijinks, and the most straightforward presentation of the Uber phenomenon written all set in Tucson, Arizona. This book reads like a movie. Strap in and prepare to be amazed.

The Driving Dilemma Elizabeth Dugan,2009-10-13 It's no secret that our population is aging. In fact, it won't be long before one in four drivers will be over the age of 65. Research suggests we'll outlive our ability to drive by almost ten years—but knowing when to stop or limit driving isn't always clear. The Driving Dilemma is a comprehensive resource for older drivers and their families facing questions about driving safety. Dr. Dugan provides clear, useful information about the effects of age, medical conditions, and medications on driving. She offers practical advice on how to discuss this issue with loved ones. Such talks can be difficult, and the book provides not only the facts, but also a research-based approach to communication, with useful sample dialogue scripts that will help you discuss driving with your loved ones. Also included are state-by-state listings of available resources, making this book a total information source for families.

The Multisensory Driver Dr Cristy Ho,Professor Charles Spence,2012-10-01 Driver inattention has been identified as one of the leading causes for car accidents. The problem of distraction while driving is likely to worsen, partly due to increasingly complex in-car technologies. However, intelligent transport systems are being developed to assist drivers and to ensure a safe road environment. One approach to the design of ergonomic automobile systems is to integrate our understanding of the human information processing systems into the design process. This book aims to further the design of ergonomic multisensory interfaces using research from the fast-growing field of cognitive neuroscience. It focuses on two aspects of driver information-processing in particular: multisensory interactions and the spatial distribution of attention in driving. The Multisensory Driver provides interface design guidelines together with a detailed review of current cognitive neuroscience and behavioural research in multisensory human perception, which will help the development of ergonomic interfaces. The discussion on spatial attention is particularly relevant for car interface designers, but it will also appeal to cognitive psychologists interested in spatial attention and the applications of these theoretical research findings. Giving a detailed description of a cohesive series of psychophysical experiments on multisensory warning signals, conducted in both laboratory and simulator settings, this book provides an approach for those in the engineering discipline who wish to test their systems with human observers.

Plato's Garage Rob Campbell,2007-04-01 In a collection of essays that are often personal, occasionally journalistic, and, now and again, meditative, Rob Campbell takes a look at the world from a different perspective - through the reflective lens of the automobile in our car-obsessed culture. From the Los Angeles he knows, where people are frequently defined by the cars they drive, to Bakersfield in which he grew up, where the group you went cruising with defined your station in life; from the people who define fantasy cars to the people who sell cars not unlike them to the high-end consumer market. With sharp wit and candid observations, Campbell has a gift for the telling detail, the particular moment which illustrates a universal truth. Just as Plato used the Simile of the Cave in his Republic, Campbell takes it that one extra step - and he posits Plato's Garage, where society parks their metaphoric cars, and then he takes them for a spin on the Universal Highway. And he guarantees a ride that is smooth, elegant, and the envy of your friends and neighbors.
