Medical Applications of Lasers D.R. Vij, K.

Mahesh, 2013-11-27 A careful review of the literature covering various aspects of applications of lasers in science and technology reveals that lasers are being applied very widely throughout the entire gamut of physical medicine. After surveying the current developments taking place in the field of medical applications of lasers, it was considered appropriate to bring together these efforts of international research scientists and experts into one volume. It is with this aim that the editors have prepared this volume which brings current research and recent developments to the attention of a wide spectrum of readership associated with hospitals, medical

institutions and universities world wide, including also the medical instrument industry. Both teachers and students in the medical faculties will especially find this compendium quite useful. This book is comprised of eleven chapters. All of the important medical applications of lasers are featured. The editors have made every effort that individual chapters are self-contained and written by experts. LANAP Laser Gum Surgery Jason C

Stoner, 2013-09-20 Author and board certified periodontist located in Columbus, Ohio, Dr. Jason C. Stoner, DDS, MS is internationally recognized as a leader in LANAP Laser Gum Surgery. LANAP stands for Laser Assisted New Attachment Procedure, a non-surgical laser technology, approved by the FDA, utilized to treat gum disease and regenerate bones, ligaments and gum tissue. LANAP is less invasive, often painless, and results in virtually no discomfort. For most patients, recovery is quick, and does not have any of the painful side effects that come with traditional cut & stitch gum surgery. When performed in mild to moderate periodontal disease conditions, LANAP is much more comfortable both during and after the laser gum therapy. Additionally, LANAP relies on your own body's cells to regenerate your tissues rather than the addition of materials from another human, animal or by synthetic materials. Periodontal disease is the #1 reason for tooth loss and, once one tooth falls out or is removed, the risk of losing additional teeth greatly increases. According to the Centers for Disease Control and Prevention (CDC) and the American Academy of Periodontology, nearly 50% of all American adults aged 30 and over

have periodontal disease. According to the author, periodontal disease is something that should always be treated by a board certified periodontist. Only 30% of periodontists in the United States achieve this board certification status. Other doctors may be able to learn how to perform the LANAP laser surgery but they typically will not to be able to comprehensively manage the treatment of the disease and its associated issues. Patients need a specialist who has spent the vast majority of their studies and surgical residency training in the specific area of the Periodontium, the tissues that support the teeth including the gums, periodontal ligament and bone. Imagine going to your family doctor and being advised to obtain a hip replacement. You expect to be referred to a specialist, namely an orthopedic surgeon for the surgery but your family doctor tells you that he just learned how to operate the latest in laser scalpel technology and he is confident he can handle your procedure. Hopefully, you would not dream of going along with that scenario. Likewise, patients with gum disease should seek out the advice of a board certified periodontist. In this book, Dr. Stoner also reveals the two critical questions you must ask your doctor before moving forward with LANAP laser gum surgery. This is the much-needed book for consumers on LANAP laser gum therapy that delivers what patients need and want: a real understanding of the latest technology available to treat periodontal disease. - Dr. Ryan C. Taylor, DDS, MS I could not put this book down. Finally a great book about LANAP written specifically for patients. - Dr. David Scharf, DMD If ever there was a book that uncovered the secret to healthy gums, LANAP Laser Gum Surgery is it. Easy, understandable, applicable. It is the best book for dental patients to come along in years. - Dr. Frank Cinco Feuille V, DDS, MS

Biomedical Aspects of the Laser Leon Goldman, 2013-11-09 This book is a review of past

and current studies and future plans of the Laser Laboratory in Cincinnati and some of the contributions of laser research groups in other medical centers. Special thanks are due to the Directing Physicist of the Laser Laboratory, R. James Rockwell. Without his advice, constant supervision and corrections, this enthusiastic investigator would continue to upset even many more people than he has done already. The excuse, of course, is to stimulate much needed interest and controlled research and development of the laser for biology and medicine. The Associate Research Physicist, Ralph Schooley, has worked with many phases of laser research but especially in Q spoiling, Raman spectroscopy, and the almost alchemy of holography. Holography, as of now, provides many opportunities for Gumperson's Law, If anything can go wrong, it will. Sincere appreciation is expressed to the Surgeons in the Laser Laboratory, who have supplied clinical and investigative surgical supervision often under great difficulties, Dr. V. E. Siler and Dr. Bruce Henderson. We are grateful for help from the Directing Biologist of the Laser Laboratory, Edmond Ritter, the Director of Laser Neurosurgery, Dr. Thomas Brown and the Professor of Neurosurgery, Dr. Robert McLaurin, for important and basic work in laser neurosurgery. Special thanks are given to Robert Meyer, who has given most of the treatments in careful and skillful fashion, and his associate, Robert Otten.

Crystalline Lasers Alexander

Kaminskii, 2020-09-10 By the end of the 1970s, crystalline lasers were widely used in science, engineering, medicine, and technology. The types of lasers used have continued to grow in number to include newly discovered crystalline hosts, previously known compounds generating at other spectral wavelengths, and broadband tunable stimulated emission. This has led to the creation of an extremely promising new generation of crystalline lasers that are both highly efficient and more reliable. The major part of this book is

devoted to describing multilevel operating laser schemes for stimulated emission excitation in insulating crystals doped with lanthanide ions. The first part of Crystalline Lasers deals with the history of the physics and spectroscopy of insulating laser crystals. The chapters in the second part of the book present results from the study of Stark-energy levels of generating ions in laser crystals and their radiative and nonradiative intermanifold transition characteristics. This section includes extensive tabular data and reference information. Popular and novel operating schemes of crystalline lasers are covered in Part 3. In the chapters in the fourth part of the book, the newest technologies in the physics and engineering of crystalline lasers are considered. The results of investigations into laser action under selective excitations, miniature crystalline lasers, and the properties of nonlinear activated laser crystals are presented and analyzed. Crystalline Lasers summarizes and reviews the results of many years of research and studies of activator ions and multilevel operating laser schemes, and discusses exciting prospects of using these systems to create new types of crystalline lasers. This book will be of use to laser scientists and engineers, physicists, and chemical engineers.
