Create an Uber Clone in 7 Days Shai Almog,2018-07-28 Do you want to build a location based mobile application? Do you read technical books and feel that they left some parts out? Do you want to get into mobile programming with real world examples? If you answered yes to one of these questions this book might be for you! The goal of this book is to teach via familiarity. Since the Uber application is well designed and familiar we chose it as the target but the book isn't meant as a copy Uber cookbook. Many applications are built around ideas similar to Uber and utilize designs inspired by Uber. It's our assumption that you can learn a lot by understanding how to build something like Uber. We break down a real world application from client to the server. This fills in all the pieces, that typical tech books skim over. This book covers: iOS/Android development with Codename One Spring Boot server development on top of MySQL WebSockets, WebServices and push notification as the communication layer Creating a sublime UI to match professional designs Map based user interface User authorization via SMS/Social Networks Best practices, security and pitfalls of mobile development The book requires basic knowledge of Java but doesn't require prior knowledge of Codename One, Spring Boot or MySQL. Notice that this book is code heavy, it contains many listings as it implements a full stack mobile app. Uber (TM) is a trademark of Uber Technologies Inc. This work is intended strictly for educational purposes. We don't condone the misuse of Uber IP! About the Author: Shai's professional software development career started more than 25 years ago. He worked for/with countless companies including Sun Microsystems, Oracle, Samsung, Nokia as well as banks, insurance companies etc. Shai was a team member on the original Wireless Toolkit from Sun Microsystems. It was the most popular cross platform mobile development tool at the time, and revolutionized the field. Together with Chen Fishbein they created LWUIT which became the most successful mobile open source project from Sun Microsystems and the basis for Codename One. Shai is a Java One rockstar who shared the stage with the likes of James Gosling. As a highly rated speaker he was featured in multiple conferences such as JavaZone, codemotion, dev days etc. He blogs at Codename One as well as Hackernoon, JavaCodeGeeks and dzone (MVB).

The Dream Machine M. Mitchell Waldrop, 2018-09-25 The story of the man who instigated the work that led to the internet—and shifted our understanding of what computers could be. Behind every great revolution is a vision and behind perhaps the greatest revolution of our time, personal computing, is the vision of J.C.R. Licklider. He did not design the first personal computers or write the software that ran on them, nor was he involved in the legendary early companies that brought them to the forefront of our everyday experience. He was instead a relentless visionary that saw the potential of the way individuals could interact with computers and software. At a time when computers were a short step removed from mechanical data processors, Licklider was writing treatises on human-computer symbiosis, computers as communication devices, and a now not-so-unfamiliar Intergalactic Network. His ideas became so influential, his passion so contagious, that Waldrop called him computing's Johnny Appleseed. In a simultaneously compelling personal narrative and comprehensive historical exposition, Waldrop tells the story of the man who not only instigated the work that led to the internet, but also shifted our understanding of what computers

were and could be. Included in this edition are also the original texts of Licklider's three most influential writings: 'Man-computer symbiosis' (1960), which outlines the vision that inspired the personal computer revolution of the 1970s; his 'Intergalactic Network' memo (1963), which outlines the vision that inspired the internet; and The computer as a communication device (1968, co-authored with Robert Taylor), which amplifies his vision for what the network could become.
