Computational Complexity and Property Testing Oded Goldreich,2020-04-03 This volume contains a collection of studies in the areas of complexity theory and property testing. The 21 pieces of scientific work included were conducted at different times, mostly during the last decade. Although most of these works have been cited in the literature, none of them was formally published before. Within complexity theory the topics include constant-depth Boolean circuits, explicit construction of expander graphs, interactive proof systems, monotone formulae for majority, probabilistically checkable proofs (PCPs), pseudorandomness, worst-case to average-case reductions, and zero-knowledge proofs. Within property testing the topics include distribution testing, linearity testing, lower bounds on the query complexity (of property testing), testing graph properties, and tolerant testing. A common theme in this collection is the interplay between randomness and computation.

Functional Genomics Stephen Hunt,Frederick . Livesey,2000-10-19 With the complete genomes of many organisms now available, and the first draft of the human genome imminent, there is an increasing demand from researchers in a range of disciplines for techniques that will allow them to utilize these resources in their own research. This book provides a comprehensive treatment of the range of methods available for gene and protein expression profiling in a variety of systems. These include large-scale methods, such as cDNA microarrays, serial analysis of gene expression (SAGE) and proteomics, and also methods suitable for non-specialist laboratories, such as differential display and suppression subtraction hybridization. In all cases the chapters have been written by the developers of these methods or experienced users and include detailed protocols to facilitate the introduction of these methods to the readers' laboratories.

Prospects for Saline Agriculture R. Ahmad,K.A. Malik,2013-11-09 Saline land is a resource capable of significant production. Recent advances in research in breeding for salt tolerance in wheat, biotechnology in rice, and selection and rehabilitation of salt-tolerant plants are of economic importance in arid/saline conditions. This book gives some practical approaches for saline agriculture and afforestation, and describes examples of cultivating salt-tolerant/halophytic plants for commercial interest on salt-affected land or with highly salinized water in Australia, China, Central Asia, Egypt, Pakistan, and Russia. It also explores the possibilities of arid/saline agriculture and afforestation in UAE.

Management of Bladder Cancer Badrinath R. Konety,Sam S. Chang,2014-11-17 Management of bladder cancer provides a single, comprehensive reference source that incorporates all the latest information regarding bladder cancer. The text covers epidemiology and natural history of bladder cancer as well as latest findings regarding the genetics and molecular biology of the disease. Diagnostic and staging evaluation of both non-muscle invasive and invasive bladder cancer is discussed. The text incorporates chapters summarizing new findings regarding markers for the diagnosis of bladder cancer and new diagnostic techniques to enhance traditional methods such as cystoscopy. Risk stratified treatment of non muscle invasive bladder cancer including various approaches to intravesical therapy are reviewed. Current guideline based approaches to management and new data regarding diagnosis and prognostication of muscle invasive bladder cancer is analyzed and summarized. The application of chemotherapy for muscle invasive and advanced disease is discussed and the evidence based application of multimodality therapy highlighted. Finally, gaps in current knowledge and areas for future research are highlighted. Ongoing important clinical trials which could imminently yield significant new knowledge is discussed. Authored by experts in their respective fields, Management of Bladder Cancer will serve as a easy and complete reference source for clinicians, researchers, individuals in training, allied health professionals and medical students in the fields of Urology, Medical Oncology, Radiation Oncology, Basic and Translational Science and Epidemiology.

Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A. Hayat,2005-01-31 Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ. This technique has allowed the identification of many more cell types than could be visualized by classical histology, particularly in the immune system and among the scattered hormone-secreting cells of the endocrine system, and has the potential to improve diagnosis, prognosis and therapeutic options of cancer. Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis. It provides step-by-step instructions on the methods of additional molecular technologies such as DNA microarrays, and microdissection, along with the benefits and limitations of each method. The topics of region-specific gene expression, its role in cancer development and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today. This book is the second volume of three planned, individually-sold volumes on this topic. Like Volume 1, this book fully explains the principles and applications of modern techniques used in the field of molecular genetics. It will be of particular interest to pathologists and molecular pathologists conducting both academic and/or clinical research. The only book available that translates molecular genetics into cancer diagnosis The results of each Immunohistochemical and in situ hybridization method are presented in the form of color illustrations Methods discussed were either developed or refined by expert contributors in their own laboratories

Digital Circuit Testing Francis C. Wong,2012-12-02 Recent technological advances have created a testing crisis in the electronics industry--smaller, more highly integrated electronic circuits and new packaging techniques make it increasingly difficult to physically access test nodes. New testing methods are needed for the next generation of electronic equipment and a great deal of emphasis is being placed on the development of these methods. Some of the techniques now becoming popular include design for testability (DFT), built-in self-test (BIST), and automatic test vector generation (ATVG). This book will provide a practical introduction to these and other testing techniques. For each technique introduced, the author provides real-world examples so the reader can achieve a working knowledge of how to choose and apply these increasingly important testing

methods.
