**Technobiophilia** Sue Thomas,2013-09-26 Why are there so many nature metaphors - clouds, rivers, streams, viruses, and bugs - in the language of the internet? Why do we adorn our screens with exotic images of forests, waterfalls, animals and beaches? In Technobiophilia: Nature and Cyberspace, Sue Thomas interrogates the prevalence online of nature-derived metaphors and imagery and comes to a surprising conclusion. The root of this trend, she believes, lies in biophilia, defined by biologist E.O. Wilson as 'the innate attraction to life and lifelike processes'. In this wide-ranging transdisciplinary study she explores the strong thread of biophilia which runs through our online lives, a phenomenon she calls 'technobiophilia', or, the 'innate attraction to life and lifelike processes as they appear in technology'. The restorative qualities of biophilia can alleviate mental fatigue and enhance our capacity for directed attention, soothing our connected minds and easing our relationship with computers. Technobiophilia: Nature and Cyberspace offers new insights on what is commonly known as 'work-life balance'. It explores ways to make our peace with technology-induced anxiety and achieve a 'tech-nature balance' through practical experiments designed to enhance our digital lives indoors, outdoors, and online. The book draws on a long history of literature on nature and technology and breaks new ground as the first to link the two. Its accessible style will attract the general reader, whilst the clear definition of key terms and concepts throughout should appeal to undergraduates and postgraduates of new media and communication studies, internet studies, environmental psychology, and human-computer interaction. Earth from Space Michael Bright,Chloe Sarosh,2019-04-11 Disclaimer: book optimally viewed on a colour device. You don't know home until you leave it. With over 200 spectacular images, including astonishing satellite images and stills from the BBC Natural History Unit's footage, Earth from Space reveals our planet as you've never seen it before. For decades we competed to be the first to reach space, but it was when we looked back at Earth that we were truly awestruck. Now, for the first time, using advanced satellite images we can show the earth's surface, its mega structures, weather patterns and natural wonders in breathtaking detail. From the colours and patterns that make up our planet to the mass migrations and seismic changes that shape it, Earth from Space sheds new light on the planet we call home. It reveals the intimate stories behind the breathtaking images, following herds of elephants crossing the plains of Africa and turtles travelling on ocean currents that are invisible unless seen from space. The true colours of our blue planet are revealed, from the striped tulip fields of Holland to the green swirl of a plankton super bloom that attracts a marine feeding frenzy. Whether it's the world's largest beaver dam – so remote it was only discovered through satellite imagery – or newly formed islands born from volcanic eruptions, discover a new perspective on our ever-changing planet.

**The Culture of Stopping** Harald Welzer,2023-05-25 Our culture has no concept of stopping. We continue to build motorways and airports for a future in which cars and planes may no longer exist. We're converting our planet from a natural one to an artificial one in which the quantity of man-made objects – houses, asphalt, cars, plastic, computers and so on – now exceeds the totality of living matter. And while biomass continues to decline due to deforestation and species extinction, the mass of man-made objects is growing faster than ever. We're on a treadmill to disaster. To get off this treadmill, argues Harald Welzer, we need to learn how to stop: as individuals and as societies, we need to stop doing what we're doing and say 'enough'. We find it hard to do this because our culture has trained us to regard endless escalation as desirable, and we're reluctant to surrender the material benefits of growth. But as long as the expansive cultural model continues to prevail, there will be no change of course in favour of sustainable and climate-friendly practices and lifestyles. We need a cultural model in which the beauty of stopping is given the recognition needed for the project of civilization to continue. Optimizing processes that are heading in the wrong direction only makes matters worse. Stopping is imperative: it is a human cultural technique that we must re-learn. Only then can we achieve a new beginning.

*TRUTH - about the World We Live In* Darko Marijanovic,2017-07-23 hey say that not knowing is blissful. And I have to tell you that I agree with that. I wish I'd never uncovered the truth. Now I know! If I write this book maybe I'd calm down. I have written what is needed for the beginning, maybe even You, the ones that read this a few times will understand and will continue to write about this incredible knowledge. This book will help to understand the truth, or the person you would like to transfer it to, but don't have the will to explain nor debate, than simply gave them the book to read and return when finished. The book is your tool for this mission which we believe in the truth. This book is written in over 40 chapters which were shorted with time, and goal is to challenge your brain to really think, and understand the truth. Man is the most important factor on Earth, but can't survive with Earth. Today 1% government with 99% mankind, but that will destroy the human species, aswell as the Earth's plate. It's time to start an interest for survival of mankind and the environment. The first step is to understand the truth about the place we all live called Earth. Good luck friends!

**Processing for Android** Andrés Colubri,2017-11-02 Learn how to use the Processing programming language and environment to create Android applications with ease. This book covers the basics of the Processing language, allowing users to effectively program interactive graphics in 2D and 3D. It also details the application of these techniques to different types of Android devices (smartphones, tablets, wearables and smartwatches). Processing for Android walks you through the steps of taking an initial idea to a final app. With this book, you will be able to write engaging apps with interactive visuals driven by motion and location information obtained from the device's sensors; including health data from the wearer, like step count and heart rate. An advantage of Processing for Android over more complex programming environments is the ability for users to focus on the interactions and visual output of their code rather than in the implementation details of the Android platform. This book goes through a comprehensive series of hand-on projects, ranging from simple sketches to more complex projects involving sensors and integration with larger apps. It also covers important aspects such as exporting your Processing projects as signed apps are ready to upload to the Google Play store and be share with the world! What You'll Learn Write apps and live wallpapers for smartphones and tablets Design and implement interactive watch faces Create Virtual Reality experiences for Cardboard devices Integrate Processing sketches into larger apps and Android Studio Export projects as completed apps ready to distribute through Google Play Store Who This Book Is For Artists, designers, students, researchers, and hobbyists who are not necessarily Android experts, but are looking to write mobile apps that make creative use of interactive graphics, sensor data, and virtual reality.
