Technobiophilia Sue Thomas,2013-09-26 Why are there so many nature metaphors - clouds, rivers, streams, viruses, and bugs - in the language of the internet? Why do we adorn our screens with exotic images of forests, waterfalls, animals and beaches? In *Technobiophilia: Nature and Cyberspace*, Sue Thomas interrogates the prevalence online of nature-derived metaphors and imagery and comes to a surprising conclusion. The root of this trend, she believes, lies in biophilia, defined by biologist E.O. Wilson as 'the innate attraction to life and lifelike processes'. In this wide-ranging transdisciplinary study she explores the strong thread of biophilia which runs through our online lives, a phenomenon she calls 'technobiophilia', or, the 'innate attraction to life and lifelike processes as they appear in technology'. The restorative qualities of biophilia can alleviate mental fatigue and enhance our capacity for directed attention, soothing our connected minds and easing our relationship with computers. *Technobiophilia: Nature and Cyberspace* offers new insights on what is commonly known as 'work-life balance'. It explores ways to make our peace with technology-induced anxiety and achieve a 'tech-nature balance' through practical experiments designed to enhance our digital lives indoors, outdoors, and online. The book draws on a long history of literature on nature and technology and breaks new ground as the first to link the two. Its accessible style will attract the general reader, whilst the clear definition of key terms and concepts throughout should appeal to undergraduates and postgraduates of new media and communication studies, internet studies,

environmental psychology, and human-computer interaction. www.technobiophilia.com

Earth from Space Michael Bright,Chloe Sarosh,2019-04-11 Disclaimer: book optimally viewed on a colour device. You don't know home until you leave it. With over 200 spectacular images, including astonishing satellite images and stills from the BBC Natural History Unit's footage, *Earth from Space* reveals our planet as you've never seen it before. For decades we competed to be the first to reach space, but it was when we looked back at Earth that we were truly awestruck. Now, for the first time, using advanced satellite images we can show the earth's surface, its mega structures, weather patterns and natural wonders in breathtaking detail. From the colours and patterns that make up our planet to the mass migrations and seismic changes that shape it, *Earth from Space* sheds new light on the planet we call home. It reveals the intimate stories behind the breathtaking images, following herds of elephants crossing the plains of Africa and turtles travelling on ocean currents that are invisible unless seen from space. The true colours of our blue planet are revealed, from the striped tulip fields of Holland to the green swirl of a plankton super bloom that attracts a marine feeding frenzy. Whether it's the world's largest beaver dam – so remote it was only discovered through satellite imagery – or newly formed islands born from volcanic eruptions, discover a new perspective on our ever-changing planet.

The Boy Who Spoke to the Earth Chris Burkard,2015-07-01 When a young boy in search of joy asks the Earth where he can find happiness, the Earth responds and agrees to show him the way. The boy rushes excitedly through the landscapes that make the Earth most proud--the ocean, the cliffs, the forest, the desert, the mountains, and the top of the world. But the boy soon realizes happiness is much harder to find than he expected.

The Culture of Stopping Harald Welzer,2023-05-25 Our culture has no concept of stopping. We continue to build motorways and airports for a future in which cars and planes may no longer exist. We're converting our planet from a natural one to an artificial one in which the quantity of man-made objects – houses, asphalt, cars, plastic, computers and so on – now exceeds the totality of living matter. And while biomass continues to decline due to deforestation and species extinction, the mass of man-made objects is growing faster than ever. We're on a treadmill to disaster. To get off this treadmill, argues Harald Welzer, we need to learn how to stop: as

individuals and as societies, we need to stop doing what we're doing and say 'enough'. We find it hard to do this because our culture has trained us to regard endless escalation as desirable, and we're reluctant to surrender the material benefits of growth. But as long as the expansive cultural model continues to prevail, there will be no change of course in favour of sustainable and climate-friendly practices and lifestyles. We need a cultural model in which the beauty of stopping is given the recognition needed for the project of civilization to continue. Optimizing processes that are heading in the wrong direction only makes matters worse. Stopping is imperative: it is a human cultural technique that we must re-learn. Only then can we achieve a new beginning.

The Earth We Live on Harry Armstrong,1971

Being Alive Tim Ingold,2021-11-29 Anthropology is a disciplined inquiry into the conditions and potentials of human life. Generations of theorists, however, have expunged life from their accounts, treating it as the mere output of patterns, codes, structures or systems variously defined as genetic or cultural, natural or social. Building on his classic work *The Perception of the Environment*, Tim Ingold sets out to restore life to where it should belong, at the heart of anthropological concern. *Being Alive* ranges over such themes as the vitality of materials; what it means to make things; the perception and formation of the ground; the mingling of earth and sky in the weather-world; the experiences of light, sound and feeling; the role of storytelling in the integration of knowledge; and the potential of drawing to unite observation and description. Our humanity, Ingold argues, does not come ready-made but is continually fashioned in our movements along ways of life. Starting from the idea of life as a process of wayfaring, Ingold presents a radically new understanding of movement, knowledge and description as dimensions not just of being in the world, but of being alive to what is going on there. This edition includes a new preface by the author.

The Green Bible. Bad Theology, Bad Science K B Napier,

The Tiger John Vaillant, 2010-08-24 It's December 1997 and a man-eating tiger is on the prowl outside a remote village in Russia's Far East. The tiger isn't just killing people, it's annihilating them, and a team of men and their dogs must hunt it on foot through the forest in the brutal cold. To their horrified astonishment it emerges that the attacks are not random: the tiger is engaged in a vendetta. Injured and starving, it must be found before it strikes again, and the story becomes a battle for survival between the two main characters: Yuri Trush, the lead tracker, and the tiger itself. As John Vaillant vividly recreates the extraordinary events of that winter, he also gives us an unforgettable portrait of a spectacularly beautiful region where plants and animals exist that are found nowhere else on earth, and where the once great Siberian Tiger - the largest of its species, which can weigh over 600 lbs at more than 10 feet long - ranges daily over vast territories of forest and mountain, its numbers diminished to a fraction of what they once were. We meet the native tribes who for centuries have worshipped and lived alongside tigers - even sharing their kills with them - in a natural balance. We witness the first arrival of settlers, soldiers and hunters in the tiger's territory in the 19th century and 20th century, many fleeing Stalinism. And we come to know the Russians of today - such as the poacher Vladimir Markov - who, crushed by poverty, have turned to poaching for the corrupt, high-paying Chinese markets. Throughout we encounter surprising theories of how humans and tigers may have evolved to coexist, how we may have developed as scavengers rather than hunters and how early Homo sapiens may have once fit seamlessly into the tiger's ecosystem. Above all, we come to understand the endangered Siberian tiger, a highly intelligent super-predator, and the grave threat it faces as logging and poaching reduce its habitat and numbers - and force it to turn at bay. Beautifully written and deeply informative, *The Tiger* is a gripping tale of man and nature in collision, that leads inexorably to a final showdown in a clearing deep in the Siberian forest.
