Applying Mathematics to Construction Kenneth Williams,2011-08-01 Williams formulae, factors and accurate shorts were first used to help his students, but then the author saw that many professional construction workers also could not make simple calculations in the field.)-- Author, teacher and contractor Kenneth Williams, Sr., announced today the release of Applying Mathematics to Construction, Carpentry Mathematics and Estimating, published by Outskirts Press. Williams handy guide for both students and professionals diminishes the need for cumbersome measuring devices and calculators by teaching simple, easy formulae for quickly figuring out construction math problems and material estimation costs.Realizing that the use of calculators and measuring devices can also hamper ones ability to think creatively and quickly on the spot, Williams put together these clever mental calculation tips to help students, instructors and general contractors.The first section of Applying Mathematics to Construction shows how to make calculations without the use of external tools and contains such innovative tricks as his conversion of a large number of feet to inches in seconds, mentally. Section two covers how materials are measured and sold and, like the first section, offers one simple formula after another to make on the spot calculations simply and immediately.

Building Construction Estimating Stephen D. Schuette, Roger W. Liska, 1994 Building Construction Estimating furnishes readers with specific details on how a general building contractor derives the cost of a project before it begins, and how the estimate fits into the total construction process. The book provides coverage of such areas as determining labor productivity and wages, selecting equipment and assigning productivity rates and costs, acquiring specialty contractor prices, and assigning overhead costs and profit. The material is presented from the point of view of a general contractor working on a competitively bid stipulated-sum (lump-sum) contract. However, other contract methods and the effects they have on the estimating process are also discussed. Furthermore, the principles of estimating for the specialty trades are discussed from the reference of a general building contractor, and how the subcontractor's bid will affect the total project cost is presented. Of special note is the book's introduction and utilization of computers in the estimating process - enabling readers to utilize new technology in an effective and efficient manner. The book is organized in a way that first teaches the reader to perform many of the estimating activities manually, then guides them in developing a computer spreadsheet. The use of spreadsheets empowers the reader to go beyond the manual calculations and develop new and more proficient solutions to estimating problems.
