Coding Games in Scratch Jon Woodcock,2015-12-01 Coding computer programs is one of the most valuable skills anyone can have. Written for children with little to no coding experience, Coding Games in Scratch guides children through building platform games, puzzles, racers, and 3-D action games. Schools have incorporated computer coding into their curriculum beginning as early as kindergarten to ensure students understand the languages and uses of computer coding. The step-by-step guide is simple and easy to follow with Minecraft-style pixel art. Children will learn essential coding skills while having fun and creating games to play with their friends. The many different styles and types of games are covered, such as classic and arcade games. When people learn to code in Scratch, they learn important strategies for solving problems, designing projects, and communicating ideas. Coding Games in Scratch empowers children to be creative and to have fun while teaching them practical real-life skills.

**An Open Design for Computer-Aided Algorithmic Music Composition** Christopher Ariza,2005 This dissertation introduces a new design for a computer-aided algorithmic music composition system. Rather than exploring specific algorithms, this study focuses on system and component design. The design introduced here is demonstrated through its implementation in athenaCL, a modular, polyphonic, poly-paradigm algorithmic music composition system in a cross-platform interactive command-line environment. The athenaCL system offers an open-source, object-oriented composition tool written in Python. The system can be scripted and embedded, and includes integrated instrument libraries, post-tonal and microtonal pitch modeling tools, multiple-format graphical outputs, and musical output in Csound, MIDI, audio file, XML, and text formats. Software design analysis is framed within a broad historical and intertextual study of the themes, approaches, and systems of computer-aided algorithmic composition (CAAC). A detailed history of the earliest experiments, as well as analysis of the foundational CAAC systems, is provided. Common problems and interpretations of CAAC are then presented in a historical and intertextual context, drawn from the writings and systems of numerous composers and developers. Toward the goal of developing techniques of comparative software analysis, a survey of system design archetypes, based on seven descriptors of CAAC systems, is presented. With this foundation, athenaCL system components are analyzed in detail. System components are divided into abstractions of musical materials, abstractions of musical procedures, and system architecture. For each component, object models, Python examples, and diagrams are provided. Further, each component is given context in terms of its compositional implications and relation to alternative and related models from the history of CAAC.
