Prediction of Protein Structure and the Principles of Protein Conformation G.D. Fasman,1989-10-31 The prediction of the conformation of proteins has developed from an intellectual exercise into a serious practical endeavor that has great promise to yield new stable enzymes, products of pharmacological significance, and catalysts of great potential. With the application of prediction gaining momentum in various fields, such as enzymology and immunology, it was deemed time that a volume be published to make available a thorough evaluation of present methods, for researchers in this field to expound fully the virtues of various algorithms, to open the field to a wider audience, and to offer the scientific public an opportunity to examine carefully its successes and failures. In this manner the practitioners of the art could better evaluate the tools and the output so that their expectations and applications could be more realistic. The editor has assembled chapters by many of the main contributors to this area and simultaneously placed their programs at three national resources so that they are readily available to those who wish to apply them to their personal interests. These algorithms, written by their originators, when utilized on personal or larger computers, can instantaneously take a primary amino acid sequence and produce a two-or three-dimensional artistic image that gives satisfaction to one's esthetic sensibilities and food for thought concerning the structure and function of proteins. It is in this spirit that this volume was envisaged.

International Financial Statistics, April 2006 International Monetary Fund. Statistics Dept.,2006-04-04 International Financial Statistics provides a complete library of continuously updated international statistics on all aspects of international and domestic finance. The monthly print edition contains over 1,000 pages of statistical data in each issue. It reports, for most countries of the world, current data needed in the analysis of problems of international payments and of inflation and deflation, i.e., data on exchange rates, international liquidity, money and banking, interest rates, prices, production, international transactions, government accounts, and national accounts. Information is presented in country tables and in tables of area and world aggregates.
