Eco-Politics and Global Climate Change Sachchidanand Tripathi, Rahul Bhadouria, Rishikesh Singh, Pratap Srivastava, Rajkumari Sanayaima Devi, 2024-01-01 This book provides an in-depth insight into the ecological perspective on a number of ongoing issues pertaining to security, the economy, the state, global environmental governance, development, and the environment. The chapters critically compare and analyze the role of global eco-politics in understanding and sorting out issues linked with climate change. Furthermore, it presents a contemporary and accessible description of why we need to embrace eco-politics in order to address the various ecological challenges that we face in the current changing climate scenario.

Land Cover Change and Its Eco-environmental Responses in Nepal Ainong Li, Wei Deng, Wei Zhao, 2017-08-22 This book offers a systematic investigation of the ecological and environmental issues related to the land cover changes in Nepal by researchers from both China and Nepal. It discusses the eco-environmental issues faced by Nepal, particularly in the hills and mountain regions. It also sheds light on the global concerns regarding the eco-environment issues of mountains, and analyzes the various causes and potential consequences of eco-environmental degradation in Nepal. The book is of particular interest to students, researchers, experts, and decision-makers wanting to gain a general overview of land cover in Nepal and its dynamics, environment and natural resources, as well as mountain hazards.

Impact of Climate Change and Human Activity on the Eco-environment Liqiang Xu, 2014-10-10 This study describes the fundamentals of assessing the vulnerability of coral islands, as well as environmental management and resource exploitation. Using seabird subfossils, such as bones, guano, eggshells etc., which have been well preserved on the Xisha Islands in the South China Sea, the author identifies the influences of climate change and human activity on seabird populations and diets. Understanding the past is of great importance for predicting the future, and seabird subfossils provide valuable information, which can be used to study changes in seabird ecology, paleoceanography and palaeoclimate. Furthermore, this study proposes examining the biogeochemical cycling of some elements present in the geosphere, hydrosphere, biosphere and atmosphere. Dr. Liqiang Xu works at the Hefei University of Technology, China.

Financing Change Stephan Schmidheiny, Federico J. Zorraquin, 1996 Whether the workings of financial markets do, or should, support sustainable development is the primary question of this study. Other questions examined may become increasingly important as populations grow and developing countries enter financial markets.

The Changing Nature of Eco/Feminism Niamh Moore, 2015-04-15 Twenty years after activists set up a peace camp blocking a logging road into an extensive area of temperate rainforest in Clayoquot Sound, that summer of protest still holds a prominent place in Canadian environmental discourse. Although the camp was said to be based on feminist or eco/feminist principles, insufficient attention has been paid to its impact on feminism and the debates that were raging at that time. Moore sets out to remedy this through a careful, qualitative study of the peace camp. She demonstrates that the sheer vitality of eco/feminist politics at the camp confounded dominant narratives of contemporary feminism and re-imagined eco/feminist politics for new times.

Eco-Nihilism Wendy Lynne Lee, 2017-02-22 Eco-Nihilism: The Philosophical Geopolitics of the Climate Change Apocalypse argues that there are no versions of conquest capital compatible with the fact of a finite planet, and that the pursuit of growth is destined to not only exhaust our planetary resources, but generate profound social injustice and geopolitical violence in its pursuit.

Eco-heroes, Agents of Change Sharon Parsons, 2011 The Eco-Heroes are an inspirational group of people who demonstrate that every eco-action helps to reverse the effects of environmentally harmful practices. In this book you'll meet an 11-year-old boy who won an Action for Nature

International Eco-Hero Award for his fantastic work in protecting Atlantic horseshoe crabs near his home in the USA, and Roz Savage, who is rowing solo across the oceans to raise awareness about plastic pollution in Earth's largest ecosystem.

Climate Change Research at Universities Walter Leal Filho, 2017-06-02 This unique book provides a multidisciplinary review of current, climate-change research projects at universities around the globe, offering perspectives from all of the natural and social sciences. Numerous universities worldwide pursue state-of-the-art research on climate change, focussing on mitigation of its effects as well as human adaptation to it. However, the 2015 Paris 21st Conference of the Parties of the United Nations Framework Convention on Climate Change (UNFCCC) (COP 21)" demonstrated that there is still much room for improvement in the role played by universities in international negotiations and decision-making on climate change. To date, few scientific meetings have provided multidisciplinary perspectives on climate change in which researchers across the natural and social sciences could come together to exchange research findings and discuss methods relating to climate change mitigation and adaption studies. As a result the published literature has also lacked a broad perspective. This book fills that gap and is of interest to all researchers and policy-makers concerned with global climate change regardless of their area of expertise.

The Green Edit: Travel Juliet Kinsman, 2020-09-10 Explore the world and satisfy your wanderlust in the most eco-friendly way. How can we lessen our impact on the world without giving up the things we love? This series of easy-to-follow guides show that positive change is possible without radical changes to your everyday life. Sustainable tourism doesn't have to mean vowing to never take another flight or spending holidays camping in your back garden. This short expert guide from eco-travel journalist Juliet Kinsman, takes you through every step of planning your trip, from booking to boarding, and arms you with everything you need to know for a lower-impact getaway. Whether it's explaining how to know which plane to take (yes, some are greener than others) or how to avoid the mini toiletries trap; this book shows that you can save the planet and still live life to the full.

Interrogating Eco-Literature and Sustainable Development Sharbani Banerjee Mukherjee, Soumitra Roy, 2023-05-17 This book examines the issues of ecological crisis and sustainable development through critical reading of literary texts. By analysing writings of Rabindranath Tagore, Amitav Ghosh, Gerard Manley Hopkins, Hannah Arendt, and Lawrence Buell, it discusses themes like oriental representations of ecological consciousness; environmental evocations; misogyny and its postmodern creations; tracing nature's footprints in English literature; statelessness and consequent environmental refugees; ecocriticism and comics; and, absolute trust in the goodness of the earth. The volume argues that within the ambit of debates between ecological threats and socio-economic concerns, culture plays a vital role particularly in relation to parameters such as identity and engagement, memory and projection, gender and generations, inquiry and learning, wellbeing and health. This book will be of interest to scholars and researchers of cultural studies, English literature, social anthropology, gender studies, sustainable development, environmental studies, ecological studies, development studies, and post-colonial studies.

Eco-Innovation Javier Carrillo-Hermosilla, P. del Río González, Totti Könnölä, Pablo del Río González, 2009-08-28 Eco-Innovation considers the impact industry has on our environmental surroundings whilst exploring the need for more sustainable development. The concept of sustainable development and the general understanding of the interdependence of the environment and the economy are both examined in this thought-provoking new book.

Eco-Tracking Daniel Shaw, 2010 Eco-tracking tells true life success stories of young people involved in citizen science efforts and how others can join in tracking climate change, local wildlife, and other parts of the natural world.

Eco Thrifty Living Zoe Morrison, 2019-07-09 Learn how to spend less, be kinder to the environment and go in the direction of your dreams! Back in 2011 I became a parent for the second time and wanted to quit my job and be a stay at home mum. We had just moved house and increased our mortgage, now had two children to look after and I preferred to buy costly eco-friendly and organic products. How was I going to be able cut my

spending by enough money to quit my job and stick to my eco-friendly principles? The challenge was set and a year later I did quit my job to become a stay at home mum and blogger. I saved far more money than I ever could have imagined by being eco-friendly! In this book I share with you what I have learned over the years of saving money and the environment. There are lots of practical hints and tips, which overall will help you to: 1. Make the most of what you have 2. Reduce your rubbish 3. Save you money 4. Unleash your creative side. Topics covered in the book include: 1. Kitchen waste 2. Stuff 3. Sustainable fashion 4. Cleaning 5. Bathroom 6. Entertainment 7. Celebrations and special occasions 8. Energy 9. Getting fit 10. Kids 11. Gardening If you think freeing up some cash could help improve your life, you care about the environment and you are ready to do things differently, then this is the book for you! Zoe Morrison is the author of award winning blog www.ecothriftyliving.com. She is regularly interviewed on BBC Radio and she has been featured in newspapers around the world.

WE GO ECO: The Climate We Change Katie Woolley, 2023-08-10 Guides to eco-friendly living and how the choices we make can help sustain Earth's future. In *The Climate we Change* we learn about what a carbon footprint is, how the greenhouse effect works, why and how our climate is changing and how we can help by making changes to our daily lives, such as saving energy. The *We Go Eco* series is a child-friendly introduction to eco-living and understanding the world through the choices we make and the shared responsibilities we have. As well as scientific learning, *Go Eco* panels throughout the books make practical suggestions on what we can all do to help make a difference in our daily lives. An activist spread at the back of each book takes a look at inspiring young people from around the world who have already made a difference in a particular environmental theme. Informative, approachable text is supported by buzzing, bold artwork - perfect for children aged 5-7 or those reading at book band 6 Orange. Titles in the series: *The Journeys We Make* *The Planet We Share* *The Climate We Change* *The Energy We Use* *The Crops We Grow* *The Food We Eat* *The Cities We Live In* *The Homes We Build* *The Animals We Save* *The Things We Recycle*

Anthropocene Fictions Adam Trexler, 2015-04-20 Since the Industrial Revolution, humans have transformed the Earth's atmosphere, committing our planet to more extreme weather, rising sea levels, melting polar ice caps, and mass extinction. This period of observable human impact on the Earth's ecosystems has been called the Anthropocene Age. The anthropogenic climate change that has impacted the Earth has also affected our literature, but criticism of the contemporary novel has not adequately recognized the literary response to this level of environmental crisis. Ecocriticism's theories of place and planet, meanwhile, are troubled by a climate that is neither natural nor under human control. *Anthropocene Fictions* is the first systematic examination of the hundreds of novels that have been written about anthropogenic climate change. Drawing on climatology, the sociology and philosophy of science, geography, and environmental economics, Adam Trexler argues that the novel has become an essential tool to construct meaning in an age of climate change. The novel expands the reach of climate science beyond the laboratory or model, turning abstract predictions into subjectively tangible experiences of place, identity, and culture. Political and economic organizations are also being transformed by their struggle for sustainability. In turn, the novel has been forced to adapt to new boundaries between truth and fabrication, nature and economies, and individual choice and larger systems of natural phenomena. *Anthropocene Fictions* argues that new modes of inhabiting climate are of the utmost critical and political importance, when unprecedented scientific consensus has failed to lead to action. *Under the Sign of Nature: Explorations in Ecocriticism*

Eco-Cities Zhifeng Yang, 2012-10-15 As cities undergo vast changes due to industrialization, urbanization, and globalization, environmental considerations assume a growing importance in the urban planning processes of an increasing number of governments around the world. Several cities and regions around the world have already enacted policies that signal the emergence of a paradigm of sustainability in eco-cities planning. Providing an overview of urban ecosystem structure, function, and change, *Eco-Cities: A Planning Guide* addresses how to successfully accomplish eco-city

planning that meets government requirements. It adds a new dimension to the understanding and application of the concept of urban sustainability, based on hypotheses about feedback between social and biogeophysical processes. Emphasizing integration, the first part of the book discusses various aspects of planning theory. It presents three innovative theories for socioeconomic models: a theory on the locational choices made by households and firms, an urban version of the stream continuum concept, and an application of metacommunity theory to the fragmented urban biota. These theories raise new urban planning questions and stimulate integrated modeling. The book also introduces urban planning modeling that uses existing social, vegetation, ecohydrological, and ecosystem service modules but is refined and operated for enhanced cross-disciplinary integration and prediction. The second part of the book consists of several case studies of Chinese eco-cities covering a majority of the urban development patterns that offer in-depth examples of planning practices currently in use. Drawing on experimentation, comparison, long-term measurement, and modeling, this fascinating guide helps readers better understand eco-cities and eco-landscapes as integrated, spatially extensive, complex adaptive systems. It lays a solid foundation for engagement between urban planners, researchers, educators, policy makers, and citizens as they work to adapt to changing environmental, social, and economic conditions.

Eco-Types Emily Huddart Kennedy, 2022-10-04 Why acknowledging diverse eco-social relationships can help us overcome the political polarization that undermines our ability to protect the environment When we picture the ideal environmentalist, we likely have in mind someone who dedicates herself to reducing her own environmental footprint through individual choices about consumption—driving a fuel-efficient car, for example, or eating less meat, or refusing plastic straws. This is a benchmark that many aspire to—and many others reject. In *Eco-Types*, Emily Huddart Kennedy shows that there is more than one way to care about the environment, outlining a spectrum of eco-social relationships that range from engagement to indifference. Drawing on three years of interviews and research, Kennedy describes five archetypal relationships with the environment: the Eco-Engaged, often politically liberal, who have an acute level of concern about the environment, a moral commitment to protect it, and the conviction that an individual can make a difference; the Self-Effacing, who share the Eco-Engaged's concerns but not the belief in their own efficacy; the Optimists, often politically conservative, who are confident in their relationship with the environment, doubt the severity of environmental problems, and resent insinuations that they don't care; the Fatalists, who are pessimistic about environmental decline and feel little responsibility to adopt environment-friendly habits; and the Indifferent, who have no affinity for any part of the environmental movement. Kennedy argues that when liberals feel they have a moral monopoly on environmental issues, polarization results. If we are serious about protecting the planet, we must acknowledge that we don't all need to care about the environment in the same way.

Eco-city Planning Tai-Chee Wong, Belinda Yuen, 2011-05-02 Eco-city planning is a key element of urban land use planning in perspective and of ongoing debate of environmental urban sustainable development with a spatial and practical dimension. The conceptual basis of ecological planning is that we can no longer afford to be merely human-centred in approach. Instead, the interdependency of human and non-human species has forced us to appreciate the 'rights' and 'intrinsic values' of non-human species in our pursuit for a sustainable ecosystem. This volume has as approach an emphasis on environmental planning policies whereby, for example, energy saving, anti-pollution measures, use of non-car modes, construction of green buildings, safeguarding of nature and natural habitats in urban areas, and use of more renewable resources are promotional norms. Their aims and leading outcome serve to protect the Earth from adverse effects of global warming and different sources of pollution threatening the quality of life of human societies.

Socio-economic and Eco-biological Dimensions in Resource use and Conservation Niranjana Roy, Shubhadeep Roychoudhury, Sunil Nautiyal, Sunil K. Agarwal, Sangeeta Baksi, 2020-01-27 This book presents the outcomes of the 2017 national workshop and international conference organized by CEENR

of ISEC, Bengaluru and Assam University Silchar. Addressing the threats to biodiversity and sustainable development resulting from the impacts of human induced pressures on ecosystems and global-warming-driven climate change is a major challenge. It requires increased knowledge and an enhanced information base in order to devise local policies to improve the adaptive capacity of vulnerable socio-ecological systems in developing countries. In this context, the book presents research that has the potential to benefit the environment and empower communities. It appeals to researchers investigating diverse aspects of socio-ecological-biological systems to create strategies for resource use, conservation and management to ensure sustainability.

Small World, Big Ideas Satish Kumar, 2022-03-01 Small World, Big Ideas collects twelve of the most inspiring and courageous activists together to share their stories and present an inspiring vision of what each of us can do to build a better world today. There's an activist in all of us, and you don't have to shout about it to be heard. And to prove it, life-long campaigner and former Jain monk Satish Kumar has invited twelve of those activists he most admires to share their own inspiring stories in Small World, Big Ideas, revealing—some, for the very first time—who or what made them want to change the world and what kind of world they want to help create. This book collects the thoughts, hopes and visions of some of the most significant figures in the global fight for a better and more compassionate world. As well as Satish Kumar, we hear from: Deepak Chopra - The mind-body healing pioneer discusses his journey from growing up in post-war India to learning about Ayurvedic medicine, to his current work promoting spiritual knowledge and working for world peace. Jane Goodall - The renowned scientist and conservationist tells of the people who have inspired her in her work to protect animals, and the reasons she has for hope in the future. Franny Armstrong - The McLibel filmmaker writes about her politicisation as a teenager, her involvement with the Greenpeace movement and the next steps in the fight against climate change. Bob Brown - The Australian Green politician shares stories from his time as an ecologist and lawmaker, and his belief in how democracy can be used to bring people together to fight the looming crises facing Planet Earth. Tim Flannery - The explorer and ecologist tells of watching the ecosystems around him disappear, his travels to remote areas around the world and how the only hope for our future lies in connecting with others to act together. Polly Higgins - The late environmental lawyer discusses how the concept of Earth Law, and how she came to fight for ecocide to be recognised as a crime against humanity. Caroline Lucas - England's only Green MP, Lucas writes about how she has fought all her life to change the political system, and how radical change is always possible! Bill McKibben - The writer and activist discusses moving from writing to political campaigning, and how he founded 350.org, the global grass-roots organization that works to halt and reverse climate change. Carlo Petrini - The slow food advocate tells of growing up in Piedmont, and of how we can change the world by putting food back at the centre of our lives. Vandana Shiva - The ecofeminist discusses how the multiple crises which she has fought - climate change, misogyny and inequality - are all interlinked, and how our response must be similarly all-encompassing. Whether they have championed the tragic plight of Indian farmers impoverished by the domination of the agro-giants or shamed Hollywood into treating climate change as a serious concern these are the people who have made their voices heard. Their illuminating and often moving life stories will inspire all of us to get off the couch and do something ourselves to help shape a better world.
