Sustainable Tourism in the Americas Edward W. Manning, Luis Márquez, 2023-09-30 Sustainable Tourism in the Americas introduces the reader to the establishment of sustainable tourism across the region. It examines questions such as 'what is really meant by sustainable tourism?'. Covered in eight chapters, the book discusses the evolution and application of the concept in the Americas from its origins as well as documenting established success stories of sustainable tourism policy and implementation from several countries in the Americas. The country and regional case studies critically examine what sustainable tourism means in their destination and address how in practice the concept of sustainability can be built to show results across different cultural and ecological situations ranging from local indigenous sites to urban environments. It will be a valuable addition to the current lack of literature on this concept and of particular interest to those working within and studying tourism management and related themes.

Environmental Management and Governance Charles W. Finkl, Christopher Makowski, 2014-09-16 This book deals with recent advances in coastal marine environmental management and governance. Various chapters consider new aspects of conservation, assessment of ecosystem health status, environmental survey and protection, frameworks of ocean service and governance, new applications of geo processing and GIS technology, beach

management, aquaculture site selection, assessment of water quality (brine disposal and temperature dispersion from nuclear power plants), exploration and management of coastal karst, changing perceptions of dune management, advances in interpretation of sea-level indicators and real time environmental monitoring. New advances in both environmental management and governance are of the utmost importance for sustaining critical coastal marine areas. Offering such a diverse collection of works from coastal scientists around the world, who discuss many techniques and methods at the forefront of management and governance, this publication will be of interest to coastal researchers, coastal zone managers and regulatory agency personnel.

Sandy Beaches as Endangered Ecosystems Sílvia C. Gonçalves, Susana M.F. Ferreira, 2022-02-10 Sandy beaches are the most abundant coastal environments worldwide, which have an undeniable and unique ecological value. Presently, they are amongst the most endangered ecosystems in the biosphere, mainly due to the influence of several human activities. In this book, renowned scientists from around the world describe key attributes of sandy beaches and highlight the problems which impact them. Specific tools encompassing the physical environment and the biota are pointed out, at different levels of ecological organization. The book also covers suitable management, conservation programmes and respective actions, where ecologic, economic and social dimensions are comprehensively integrated.

Global Tourism and COVID-19 Alan A. Lew,Joseph M. Cheer,Patrick Brouder,Mary

Mostafanezhad,2021-11-30 This comprehensive book focuses on how the COVID-19 pandemic is transforming travel and tourism, globally. Despite the devastation caused by COVID-19, authors argue

that within the ongoing crisis, there is also an opportunity to positively transform the tourism sector in ways that contribute to a more hopeful future for tourism practitioners, tourists and host communities. As the world emerges from the shadow of COVID-19 there will not be a return to the normal. Rather, the volume shares a vision of global transformation that is driven at least in part by the changing ways people in the post-COVID-19 era may travel and encounter each other and their environments. Individual chapters explore topics such as: regenerative economies, transformational travel, critical perspectives on pandemics and tourism, sustainable development and resilience post-COVID-19, re-discovering and re-localising tourism, global (im)mobilities, transforming tourism management, as well as new value systems for travel and tourism including the chance to strengthen social equity and social justice as tourism returns after COVID-19. In this edited volume, a series of senior and emerging scholars engage with debates on how to best contribute to more substantial, meaningful, and positive planetary shifts within the tourism industry. The chapters in this book were originally published as a special issue of the journal *Tourism Geographies*.

Indigenous Societies in the Post-colonial World Bina Sengar, A. Mia Elise Adjoumani, 2023-03-07 This edited book provides perceptions on "indigeneity"

through a global perspective. Emphasizing the contemporary and postcolonial debates on indigenous, it delves into diversity and dissonance within indigenous concepts. Through its chapters based on theoretical and empirical studies from Asian, African, and American perceptions of indigenous societies, it brings out complexity, resilience, and response of "indigenous" in the post-colonial global society. It especially looks at how these societies manage to move forward by going beyond the stigma of the colonial past. The chapters in the book are divided into three sections where they discuss indigenous cultures through interdisciplinary perspectives. The narrative approach of historical concepts and contemporary indigenous challenges within the book include anthropological, cultural, ecological, historical, literary, and legal studies. The contributions in the collection come from widely respected international scholars who are engaged in indigeneity and postcolonial questions. It allows the reader to (re)discover the theories and resilience of the indigenous societies that are historically marked and are reshaping the histories and contemporary narratives in the world. This book is of particular interest to scholars, students, policymakers, and people curious about the histories and the dynamic progress of the indigenous and indigenous societies of Africa, the Americas, and Asia.

Sea Turtles of the Eastern Pacific Jeffrey A. Seminoff, Bryan P. Wallace, 2021-11-09 Sea turtles are flagship species for the world's oceans. They traverse international boundaries during their migrations, serve as vehicles for marine nutrients to terrestrial habitats, and embody the often tenuous relationship between human action and ecosystem health. The East Pacific Ocean is home to some of the most dynamic marine ecosystems, and the most unique sea turtles. Marine biodiversity within this massive ocean region abounds in mangrove estuaries, seagrass pastures, coral reefs, the open ocean, and many other habitats, with sea turtles often the most conspicuous species present. The distinctive traits of the Eastern Pacific have resulted in the smallest leatherbacks, a singular morph of the green turtle, dark and steeply domed olive ridleys, and the most cryptic hawksbills on the planet. Only now are we beginning to understand how these varieties have evolved. However, the oceanographic conditions that make this an epicenter of sea turtle activity also promote massive artisanal and industrial fishing efforts that, coupled with illegal harvesting of eggs and turtles, have led to declines of several turtle populations in the region. The essays and stories in Sea Turtles of the Eastern Pacific describe for the first time the history of this exploitation, as well as recent sea turtle conservation initiatives and

scientific research in the region. The first third of the book considers the biology of the turtles, focusing on general overviews of current ecological management challenges facing the turtles' survival. The second third treats issues of marine policy related to turtle conservation. In conclusion, the book offers six compelling stories of conservation success. By the end, readers will have gained a in-depth view not only of these magnificent creatures, but also the people involved in research and conservation efforts in one of the most remarkable regions of our planet.

Practically Invisible Kimbra Smith, 2015-11-11
The community of Agua Blanca, deep within the Machalilla National Park on the coast of Ecuador, found itself facing the twenty-first century with a choice: embrace a booming tourist industry eager to experience a preconceived notion of indigeneity, or risk losing a battle against the encroaching forces of capitalism and development. The facts spoke for themselves, however, as tourism dollars became the most significant source of income in the community. Thus came a nearly inevitable shock, as the daily rhythms of life--rising before dawn to prepare for a long day of maintaining livestock and crops; returning for a late lunch and siesta; joining in a game of soccer followed by dinner in the evening--transformed forever in favor of a new tourist industry and the compromises required to support it. As *Practically Invisible* demonstrates, for Agua Blancans, becoming a supposedly authentic version of their own indigenous selves required performing their

culture for outsiders, thus becoming these performances within the minds of these visitors. At the heart of this story, then, is a delicate balancing act between tradition and survival, a performance experienced by countless indigenous groups.
