The Ultimate Survival Medicine Guide Joseph Alton, Amy Alton, 2015-08-04 No one knows what the next disaster will be: earthquake, Coronavirus, flu epidemic, flood, terrorist attack. But everyone should know how to survive a medical emergency if a medical professional isn't available. From Dr. Joe Alton and Amy Alton ARNP comes an updated edition of their bestseller The Survival Medicine Handbook. This unique medical book is meant to enable the average person to handle injuries and illness in situations in which modern medical facilities and professionals aren't available due to a disaster. This book is written by America's top medical preparedness experts: Joe Alton, MD, and Amy Alton, ARNP. Their mission: to put a medically prepared person in every family for when medical help is not on the way. Using decades of medical experience, they address, in plain language, dozens of medical issues associated with surviving disasters and epidemics. The Altons also discuss the medical supplies needed to become a medical asset to your family and community as well as alternative and natural strategies for when pharmaceuticals aren't available. Topics include: Appendicitis and Conditions that Mimic It Urinary Tract Infections Mosquito-Borne Illnesses Allergic Reactions and Anaphylaxis Head Injuries Animal Bites Snake Bites Head injuries Kidney Stones Dislocations and Fractures Nosebleeds Pain Medications Natural Pain Relief And much much more! Most medical books will send you to the doctor or hospital when an emergency happens. The Altons assume that the worst might actually happen—that the average person could be left without medical help in a disaster. With their book, you can keep your family healthy in times of trouble.

The Johns Hopkins Guide to Psychological First Aid George S. Everly Jr., Jeffrey M. Lating, 2017-04 Learn the essential skills of psychological first aid from the expert who created the Johns Hopkins RAPID PFA method. Psychological first aid, or PFA, is designed to mitigate the effects of acute stress and trauma and assist those in crisis to cope effectively with adversity. PFA is designed to be applied in emergencies, including disasters and terrorist attacks. In this essential guide, George S. Everly, Jr., developer of the Johns Hopkins RAPID PFA method, and Jeffrey M. Lating, his collaborator in its implementation, describe the principles and practices underpinning this psychological model in an easy-to-follow, prescriptive, and practical manner. They explain the history of PFA and persuasively demonstrate its powerful versatility. Mental health practitioners can apply PFA in all settings. It can also be used as a public-health tool to address mental health needs following critical incidents and as a means for building community resilience. Aimed at mental health practitioners, all first responders, and global health disaster teams such as Médecins Sans Frontières and the World Health Organization, *The Johns Hopkins Guide to Psychological First Aid* is the first book to thoroughly explain RAPID PFA. RAPID, a unique theoretically grounded and evidence-based PFA method, follows a set of easily understood principles. In each chapter, Everly and Lating provide a step-by-step approach and include a key point summary to emphasize essential elements. A unifying case exemplifies each phase of the RAPID PFA model in an ongoing dialogue that presents ideal PFA responses, examples of common mistakes, and various outcomes. In addition to their counseling experience in Kuwait after the Gulf War and in New York City after the September 11 attacks, the authors have traveled nationally and internationally to teach the RAPID PFA method in numerous public health, fire, police, military, and faith-based settings. Beneficial to those with little or no previous mental health training, this book is an essential tool for people who want to learn, to practice, or to retain their ability to use psychological first aid effectively.

Fluid Resuscitation Institute of Medicine, Committee on Fluid Resuscitation for Combat Casualties, 1999-11-05 Historically, 20% of all injured combatants die on the battlefield before they can be evacuated to a field hospital. Blood loss (hemorrhage) is the single major cause of death among those killed in action whose lives might otherwise be saved. Fluid resuscitation and the treatment of hypovolemia (the abnormally decreased volume of circulating fluid in the body) offer the greatest opportunity for reducing mortality and morbidity associated with battlefield casualties. In *Fluid Resuscitation*, a committee of experts assess current resuscitation fluids and protocols for the treatment of combat casualties and make recommendations for future research. Chapters focus on the pathophysiology of acute hemorrhagic shock, experience with and complications of fluid resuscitation, novel approaches to the treatment of shock, protocols of care at the site of injury, and future directions for research. The committee explicitly describes the similarities and differences between acute medical care during combat and civilian emergency trauma care. *Fluid Resuscitation* should help energize and focus research in both civilian and military emergency care and help save the lives of citizens and soldiers alike.
