Socio-Environmental Regimes and Local Visions Minerva Arce Ibarra,Manuel Roberto Parra Vázquez,Eduardo Bello Baltazar,Luciana Gomes de Araujo,2020-09-13 This book presents oral histories, collective dialogues, and analyses of rural and indigenous livelihoods facing global socio-environmental regime change in Latin America (LA). Since the late twentieth century, rural and indigenous producers in LA, including agriculturists, coffee-growers, as well as small-scale farmers/fishers, and others, have had to resist, cope with, or adapt to a range of neoliberal socio-environmental regimes that impact their territories and associated resources, including water, production systems and ultimately their cultural traditions. In response, rural producers are using local visions and innovation niches to decide what, when, and how to resist, cope with uncertainty, and still be successful in using their customary laws to retain their land rights and livelihoods. This book presents a range of ethnically diverse case studies from LA, which addresses socio-environmental, educational, and law regimes' effects using transdisciplinary research approaches in rural, traditional and indigenous production systems. Based on both, the results and insights gained into how producers are resisting and adapting to these regimes, as well as decades of research carried out in LA rural territories by the participating authors, the book puts forward a baseline for devising new public policies that are better suited to the real challenges of livelihoods, poverty, and environmental degradation in LA. These recommendations are rooted in post-development thinking; they promote territorial public policy with social inclusion and a human's rights approach. The book draws on over 20 years of research carried out by LA's academics and their undergraduate and graduate students who have addressed collaborative work, participatory research, and transdisciplinary approaches with rural commons and communities in LA. It features 19 case studies, with contributions from Argentina, Bolivia, Brazil, Colombia, Cuba, Honduras, and Mexico.

Doctor, Teacher, Terrorist Sajjan M. Gohel,2023-11-21 For over half a century, al-Qaeda leader Ayman al-Zawahiri repeatedly emerged from the shadows as a vengeful ideologue hell-bent on changing history. Dr. Sajjan M. Gohel provides the first definitive account of one of the world's most wanted terrorists. Having grown up in an illustrious Egyptian family of physicians, lawyers, clergy, and politicians, al-Zawahiri was originally destined to become a successful doctor. However, he chose to rebel against his own society which he deemed to have deviated from its religious identity. By forming his own terrorist group, al-Zawahiri dedicated his life to sedition and violent rebellion against the international order. Ayman al-Zawahiri led a life incomparable to anyone else. The Egyptian found himself in many of the places where history was being determined. His journey takes us across Egypt, Sudan, Afghanistan and Pakistan, as well as the United States and Russia. Through his close bond with Osama bin Laden, al-Zawahiri played a critical role in the evolution of al-Qaeda's ideology, recruitment, tactics, and strategy. With the deft touch of a teacher, al-Zawahiri delegated numerous murderous assignments globally. He engaged in the assassination of political leaders, sought to develop chemical and biological weapons, recruited double and triple agents, turned the tables on his enemies, and pioneered the use of new media technology to convey al-Qaeda's zealotry. In 2011, al-Zawahiri succeeded bin Laden, to become the head of al-Qaeda and sought to rebuild and reform his organisation whilst being aided by murky ties in Pakistan and Iran and his Taliban allies. Against the background of the Arab Spring and the West's departure from Afghanistan, al-Zawahiri left a deadly legacy for al-Qaeda's future for years to come.

Drone Warfare Medea Benjamin,2013-05-01 Groundbreaking exposé of the rapid shift to robot warfare, by a leading antiwar activist. Drone Warfare is the first comprehensive analysis of one of the fastest growing—and most secretive—fronts in global conflict: the rise of robot warfare. In 2000, the Pentagon had fewer than fifty aerial drones; ten years later, it had a fleet of nearly 7,500, and the US Air Force now trains more drone “pilots” than bomber and fighter pilots combined. Drones are already a \$5 billion business in the US alone. The human cost? Drone strikes have killed more than 200 children alone in Pakistan and Yemen. CODEPINK and Global Exchange cofounder Medea Benjamin provides the first extensive analysis of who is producing the drones, where they are being used, who controls these unmanned planes, and what are the legal and moral implications of their use. In vivid, readable style, this book also looks at what activists, lawyers, and scientists across the globe are doing to ground these weapons. Benjamin argues that the assassinations we are carrying out from the air will come back to haunt us when others start doing the same thing—to us.

Essays on Being Charles H. Kahn,2009-02-19 This volume presents a series of essays published by Charles Kahn over a period of forty years, in which he seeks to explicate the ancient Greek concept of Being. He addresses two distinct but intimately related problems, one linguistic and one historical and philosophical. The linguistic problem concerns the theory of the Greek verb *einai*, 'to be': how to replace the conventional but misleading distinction between copula and existential verb with a more adequate theoretical account. The philosophical problem is in principle quite distinct: to understand how the concept of Being became the central topic in Greek philosophy from Parmenides to Aristotle. But these two problems converge on what Kahn calls the veridical use of *einai*. In the earlier papers he takes that connection between the verb and the concept of truth to be the key to the central role of Being in Greek philosophy. In the later papers he interprets the veridical in terms of a more general semantic function of the verb, which comprises the notions of existence and instantiation as well as truth.

Comprehensive Inorganic Chemistry II ,2013-07-23 Comprehensive Inorganic Chemistry II, Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience.

The work is designed to follow on, with a different viewpoint and format, from our 1973 work, *Comprehensive Inorganic Chemistry*, edited by Bailar, Emeléus, Nyholm, and Trotman-Dickenson, which has received over 2,000 citations. The new work will also complement other recent Elsevier works in this area, *Comprehensive Coordination Chemistry* and *Comprehensive Organometallic Chemistry*, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable, long-standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts, under the guidance of the Volume Editors and the Editors-in-Chief. The articles are written at a level that allows undergraduate students to understand the material, while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources (and the original work), but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields, such as: biological inorganic chemistry, materials chemistry, solid state chemistry and nanoscience Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarise recent developments and simultaneously provide background information Forms the new definitive source for researchers interested in elements and their applications; completely replacing the highly cited first edition, which published in 1973

Strategic Culture and Violent Non-State Actors Edward D. Last,2020-07-12 This book applies strategic culture concepts to violent non-state actors (VNSAs) in a comparative analysis. In recent years, Al-Qaida in the Islamic Maghreb (AQIM) has become notorious for kidnapping Western hostages in north-western Africa and for its role in the short-lived Islamist takeover of Mali. The group, formerly known as the Salafist Group for Preaching and Combat, rebranded itself as an Al-Qaida franchise in 2007, leading to speculation of a change from its Algeria-centric agenda to an anti-Western one. This study compares and contrasts the ideas and behaviour of these two groups, using a strategic-cultural approach, and finds that, despite some commonalities, AQIM has a distinct strategic culture from Al-Qaida central, thereby debunking the notion of Al-Qaida as a monolithic movement. This is the first comparative analysis of violent non-state actors to employ a strategic-cultural approach and the first such study on AQIM. While strategic culture has traditionally been applied to states, this work adds to the emerging literature applying such approaches to non-state armed groups, and employs a novel conception of strategic culture consisting of narratives and practices. This book will be of much interest to students of strategic culture, political violence, Middle Eastern politics and Security Studies in general.

Management of Fusarium Species and Their Mycotoxins in Cereal Food and Feed Thomas Miedaner,Daniela Gwiazdowska,Agnieszka Waśkiewicz,2017-11-10 Health and safety of food and feed are the most important criteria for their quality. The quality of feed is in turn important for animal health, the environment and for the safety of food from animal origin. Fungi belonging to the *Fusarium* genus are widespread in crops causing plant diseases and producing toxic metabolites. *Fusarium* species can colonize plants during their growth on the field and cause serious damage in terms of yield and quality of harvested grains. One of the most important fungal diseases of wheat and other cereals in the world is *Fusarium* head blight caused by the fungal pathogens *Fusarium graminearum* and *Fusarium culmorum* and others. In addition, these fungi produce mycotoxins, contaminating food and feed. The most important *Fusarium* mycotoxins include trichothecenes, zearalenone and fumonisins, primarily because of their prevalence, but also because of the toxic effect to humans and animals. However, these fungi produce also other mycotoxins such as moniliformin, beauvericin, enniatin or fusarins. Food and feed can be contaminated with mycotoxins at various stages in the production chain resulting in serious problems with health, safety and economic losses. It is estimated that 25% of the crop in the world each year are contaminated with these metabolites, the problem affects both industrialized countries and developing countries. The aim of this Research Topic of *Frontiers in Microbiology* is to publish state of the art research about occurrence and genomics of *Fusarium* species and their mycotoxins in the whole food and feed chain starting from the crops as well as implications for health and economic aspects. This research topic highlights the current knowledge on the plant diseases caused by *Fusarium* fungi as well as all aspects of *Fusarium* mycotoxin contamination of crops, food and feed, taking into account decontamination methods.

Encyclopedia Paranoiaca Henry Beard,Christopher Cerf,2012-11-20 IGNORE THIS BOOK AT YOUR PERIL! Did you know that carrots cause blindness and bananas are radioactive? That too many candlelight dinners can cause cancer? And not only is bottled water a veritable petri dish of biohazards (so is tap water, by the way) but riding a bicycle might destroy your sex life? In *Encyclopedia Paranoiaca*, master satirists Henry Beard and Christopher Cerf have assembled an authoritative, disturbingly comprehensive, and utterly debilitating inventory of things poised to harm, maim, or kill you—all of them based on actual research about the perils of everyday life. Painstakingly alphabetized, cross-referenced, and thoroughly sourced for easy reference, this book just might save your life. (Apologies in advance if it doesn't.) Beard and Cerf cite convincing evidence that everyday things we consider healthy—eating leafy greens, flossing, washing our hands—are actually harmful, and items we thought were innocuous—drinking straws, flip-flops, neckties, skinny jeans—pose life-threatening dangers. Did you know that nearly ten thousand people are sent to the emergency room each year because of escalator accidents, and, despite what you've heard, farmers' markets may actually be less safe than grocery stores? And if you're crossing your legs right now, you're definitely at serious risk. Hilarious, insightful, and, at times, downright terrifying, *Encyclopedia Paranoiaca* brings to light a whole host of hidden threats and looming dooms that make asteroid impacts, planetary pandemics, and global warming look like a walk in the park (which is also emphatically not recommended). *** The Definitive Compendium of Things You Absolutely, Positively Must Not Eat, Drink, Wear, Take, Grow, Make, Buy, Use, Do, Permit, Believe, or Let Yourself Be Exposed to, Including an Awful Lot of Toxic, Lethal, Horrible Stuff

That You Thought Was Safe, Good, or Healthy; All Sorts of Really Bad People Who Are Out to Get, Cheat, Steal from, or Otherwise Take Advantage of You; and a Whole Host of Existential Threats and Looming Dooms That Make Global Warming, Giant Meteors, and Planetary Pandemics Look Like a Walk in the Park (with Its High Risk of Skin Cancer, Broken Bones, Bee Stings, Allergic Seizures, Animal Attacks, Criminal Assaults, and Lightning Strikes)

Why Terrorist Groups Form International Alliances Tricia Bacon,2018-06-13 Tricia Bacon examines partnerships formed by the Popular Front for the Liberation of Palestine, Al-Qaida, and Egyptian jihadist groups, among others, in a series of case studies and offers insights useful to counterterrorism efforts to disrupt these relationships.

Forthcoming Networks and Sustainability in the IoT Era Fadi Al-Turjman,Jawad Rasheed,2022-04-01 This book aims to provide a platform to the researchers and practitioners from both academia and industry to meet and share their experience and knowledge. *Forthcoming Networks and Sustainability in the IoT Era (FoNeS-IoT)*, Volume 1 & 2, aims to bring together researchers and professionals to exchange ideas on the advancements in technology, application areas for advanced communication systems and development of new services, and facilitate a tremendous growth of new devices and smart things that need to be connected to the Internet through a variety of wireless technologies. Parallel to this, new capabilities such as pervasive sensing, multimedia sensing, machine learning, deep learning, unmanned aerial vehicles, cloud and edge computing, energy efficiency/harvesting, and computing power open the way to new domains, services, and business models beyond the traditional mobile Internet. The new areas in turn come with various requirements in terms of reliability, quality of service, and energy efficiency. These are only some examples of the challenges that are of interest to researchers in *Forthcoming Networks and Sustainability in the IoT Era (FoNeS-IoT)*. It will explore the latest developments, innovations, and best practices within the IoT and the impact it has on industries including: manufacturing, transport, supply chain, communication, government, legal sectors, financial services, energy utilities, insurance, health care, retail, and many others. It provides opportunities for academicians and scientists along with professionals, policymakers, and practitioners from various fields in a global realm to present their research, contributions, and views, on one forum, and interact with members inside and outside their own particular disciplines. Papers describing applications of IoT in e-Health, Smart Systems & Management, Communication, and Education are also included, but the focus is mainly on how new and novel techniques advance the performance in application areas, rather than a presentation of yet another application of conventional tool. Papers on such applications describe a principled solution, emphasize its novelty, and present an in-depth evaluation of the techniques being exploited.

Evidence-based Clinical Chinese Medicine Charlie Changli Xue,Chuanjian Lu,2016-04-28 Evidence-based Clinical Chinese Medicine: Vol. 1 Chronic Obstructive Pulmonary Disease provides a whole evidence analysis of the Chinese medicine management of chronic obstructive pulmonary disease (COPD). Evidence from the classical Chinese medicine literature, contemporary clinical literature, and the outcomes of clinical trials and experimental studies are reviewed, analysed and synthesised. The data from all these sources are condensed to provide evidence-based statements which will inform clinical practice and guide future research. This book has been designed to be an easy reference at the point of care. During a patient consultation, Chinese medicine practitioners can refer to this book for guidance on which Chinese herbal medicine formulas, specific herbs, or acupuncture points, can best treat their patient, and be confident there is evidence which supports its use. Currently, Chinese medicine practitioners who develop a special interest in a particular health condition such as COPD have to consult a variety of sources to further their knowledge. Typically, they use the contemporary clinical literature to understand the theory, aetiology, pathogenesis and obtain expert opinions on the Chinese medicine management of COPD. They search the electronic literature to identify systematic reviews of clinical trials, if any exists, to obtain assessments of the current state of the clinical evidence for particular interventions. If they have the skills and resources, they may search the classical Chinese medicine literature for an historical perspective on treatments that have stood the test of time. This book provides all of this information for practitioners in one handy, easy to use reference. This allows practitioners to focus on their job of providing high quality healthcare, with the knowledge it is based on the best available evidence.
