Electronic Music Nick Collins,Nicholas Collins,Margaret Schedel,Scott Wilson,2013-05-09 This accessible Introduction explores both mainstream and experimental electronic music and includes many suggestions for further reading and listening.

The Sound of Tomorrow Mark Brend,2012-12-06 London, 1966: Paul McCartney met a group of three electronic musicians called Unit Delta Plus. McCartney was there because he had become fascinated by electronic music, and wanted to know how it was made. He was one of the first rock musicians to grasp its potential, but even he was notably late to the party. For years, composers and technicians had been making electronic music for film and TV. Hitchcock had commissioned a theremin soundtrack for *Spellbound* (1945); *The Forbidden Planet* (1956) featured an entirely electronic score; Delia Derbyshire had created the Dr Who theme in 1963; and by the early 1960s, all you had to do was watch commercial TV for a few hours to hear the weird and wonderful sounds of the new world. *The Sound of Tomorrow* tells the compelling story of the sonic adventurers who first introduced electronic music to the masses. A network of composers, producers, technicians and inventors, they took emerging technology and with it made sound and music that was bracingly new.

Techno Rebels Dan Sisko,2010 An updated, expanded history of techno music with special attention to its roots in Detroit.

Living Electronic Music Professor Simon Emmerson,2013-01-28 Drawing on recent ideas that explore new environments and the changing situations of composition and performance, Simon Emmerson provides a significant contribution to the study of contemporary music, bridging history, aesthetics

and the ideas behind evolving performance practices. Whether created in a studio or performed on stage, how does electronic music reflect what is live and living? What is it to perform 'live' in the age of the laptop? Many performer-composers draw upon a 'library' of materials but others refuse to abandon traditionally 'created and structured' electroacoustic work. Lying behind this maelstrom of activity is the perennial relationship to 'theory', that is, ideas, principles and practices that somehow lie behind composers' and performers' actions. The relationship of the body performing to the spaces around has also undergone a revolution as the source of sound production has shifted to the loudspeaker. Emmerson considers these issues in the framework of our increasingly 'acousmatic' world in which we cannot see the source of the sounds we hear.

The Cambridge Companion to Electronic Music Nick Collins, Julio d'Escrivan, 2017-10-30 Musicians are always quick to adopt and explore new technologies. The fast-paced changes wrought by electrification, from the microphone via the analogue synthesiser to the laptop computer, have led to a wide range of new musical styles and techniques. Electronic music has grown to a broad field of investigation, taking in historical movements such as *musique concrète* and *elektronische Musik*, and contemporary trends such as electronic dance music and *electronica*. The first edition of this book won the 2009 Nicolas Bessaraboff Prize as it brought together researchers at the forefront of the sonic explorations empowered by electronic technology to provide accessible and insightful overviews of core topics and uncover some hitherto less publicised corners of worldwide movements. This updated and expanded second edition includes four entirely new chapters, as well as new original statements from globally renowned artists of the electronic music scene, and celebrates a diverse array of technologies, practices and music.

The Cambridge Companion to Electronic Music Nick Collins, Nicholas Collins, Julio d' Escrivan Rincón, Julio

d'Esquivan,2007-12-13 A contributory volume covering the history and current scene of electronic music.

Electronic Music Andy Mackay,1981

Composing Electronic Music Curtis Roads,2015 Electronic music evokes new sensations, feelings, and thoughts in both composers and listeners. Opening the door to an unlimited universe of sound, it engages spatialization as an integral aspect of composition and focuses on sound transformation as a core structural strategy. In this new domain, pitch occurs as a flowing and ephemeral substance that can be bent, modulated, or dissolved into noise. Similarly, time occurs not merely as a fixed duration subdivided by ratios, but as a plastic medium that can be generated, modulated, reversed, warped, scrambled, and granulated. Envelope and waveform undulations on all time scales interweave to generate form. The power of algorithmic methods amplify the capabilities of music technology. Taken together, these constitute game-changing possibilities. This convergence of technical and aesthetic trends prompts the need for a new text focused on the opportunities of a sound oriented, multiscale approach to composition of electronic music. Sound oriented means a practice that takes place in the presence of sound. Multiscale means an approach that takes into account the perceptual and physical reality of multiple, interacting time scales- each of which can be composed. After more than a century of research and development, now is an appropriate moment to step back and reevaluate all that has changed under the ground of artistic practice. Composing Electronic Music outlines a new theory of composition based on the toolkit of electronic music techniques. The theory consists of a framework of concepts and a vocabulary of terms describing musical materials, their transformation, and their organization. Central to this discourse is the notion of narrative structure in composition-how sounds are born, interact, transform, and die. It presents a guidebook: a tour of facts, history, commentary, opinions, and pointers to interesting ideas

and new possibilities to consider and explore.

Music Habits - The Mental Game of Electronic Music Production Jason Timothy, 2020-07-18 Music Production can be an elusive art form for many, and the challenges that face someone who is new to this can easily create overwhelm and lead to complete paralysis. The goal of this book, is to cover music production from many different angles in a way that will change your thinking on the subject and build your confidence. Music making is a very mental and psychological game, and more often than not, all the technical stuff can hold you back from achieving your goals if you don't have the right creative habits in place first. With all the information available with a simple Google search, I wanted to really get to the heart of things that aren't being discussed nearly enough. I want to clear out all the garbage you may have been told and replace it with the essentials you can put to immediate use. Many people new to music may dive into forums and mindlessly watch video tutorials attempting to gather more and more information until they think they have enough to get going (hint: you never feel like you know enough). That would be like reading a whole encyclopedia and then being asked to recall only the important things that will get you from point A to point B. Even worse, much of the information you get will contradict the last thing you read. It's like finding a needle in a haystack only to be told it's the wrong needle. There is a much better approach. It's an approach that doesn't require you to know a lot to get started. You only need to know enough to get to the next step in your process. There is truly nothing stopping you from becoming a music producer. The ones who are successful now are the ones who started from nothing and chipped away at it until they found a way to express their unique voice. There are no gatekeepers making decisions on who is worthy and who isn't. The determining factor is you, your habits and your confidence in yourself. This book can be read from start to finish, or as a choose your own adventure, going directly to what you think can help you most

right now. Don't get caught up thinking you have to devour everything before getting started. That isn't necessary, and isn't the point of the book. The core concepts in the book will come up time & time again which should help you retain them & be able to recall them when the need arrives. By exploring these concepts from several angles you should gain a broad view of their many uses. My hope is that this book is used as a toolbox. You simply find the right tool that moves you forward and get back to work. So few people, who have more than enough information in their heads, ever start. Of those who do start, even fewer finish what they started and are satisfied with the results. I want you to be in that small group of finishers. Let's get started.

Electronic and Experimental Music Thom

Holmes, 2015-10-08 *Electronic and Experimental Music:*

Technology, Music, and Culture provides a comprehensive history of electronic music, covering key composers, genres, and techniques used in analog and digital synthesis. This textbook has been extensively revised with the needs of students and instructors in mind. The reader-friendly style, logical organization, and pedagogical features of the fifth edition allow easy access to key ideas, milestones, and concepts. New to this edition:

- A companion website, featuring key examples of electronic music, both historical and contemporary.
- Listening Guides providing a moment-by-moment annotated exploration of key works of electronic music.
- A new chapter—Contemporary Practices in Composing Electronic Music.
- Updated presentation of classic electronic music in the United Kingdom, Italy, Latin America, and Asia, covering the history of electronic music globally.
- An expanded discussion of early experiments with jazz and electronic music, and the roots of electronic rock.
- Additional accounts of the vastly under-reported contributions of women composers in the field.
- More photos, scores, and illustrations throughout.

The companion website features a number of student and instructor resources, such as additional Listening Guides, links to streaming

audio examples and online video resources, PowerPoint slides, and interactive quizzes.

Pink Noises Tara Rodgers, 2010-03-02 *Pink Noises* brings together twenty-four interviews with women in electronic music and sound cultures, including club and radio DJs, remixers, composers, improvisers, instrument builders, and installation and performance artists. The collection is an extension of [Pinknoises.com](http://pinknoises.com), the critically-acclaimed website founded by musician and scholar Tara Rodgers in 2000 to promote women in electronic music and make information about music production more accessible to women and girls. That site featured interviews that Rodgers conducted with women artists, exploring their personal histories, their creative methods, and the roles of gender in their work. This book offers new and lengthier interviews, a critical introduction, and resources for further research and technological engagement. Contemporary electronic music practices are illuminated through the stories of women artists of different generations and cultural backgrounds. They include the creators of ambient soundscapes, “performance novels,” sound sculptures, and custom software, as well as the developer of the Deep Listening philosophy and the founders of the Liquid Sound Lounge radio show and the monthly Basement Bhangra parties in New York. These and many other artists open up about topics such as their conflicted relationships to formal music training and mainstream media representations of women in electronic music. They discuss using sound to work creatively with structures of time and space, and voice and language; challenge distinctions of nature and culture; question norms of technological practice; and balance their needs for productive solitude with collaboration and community. Whether designing and building modular synthesizers with analog circuits or performing with a wearable apparatus that translates muscle movements into electronic sound, these artists expand notions of who and what counts in matters of invention, production, and noisemaking. *Pink Noises* is a powerful testimony

to the presence and vitality of women in electronic music cultures, and to the relevance of sound to feminist concerns. Interviewees: Maria Chavez, Beth Coleman (M. Singe), Antye Greie (AGF), Jeannie Hopper, Bevin Kelley (Blevin Blectum), Christina Kubisch, Le Tigre, Annea Lockwood, Giulia Loli (DJ Mutamassik), Rekha Malhotra (DJ Rekha), Riz Maslen (Neotropic), Kaffe Matthews, Susan Morabito, Ikue Mori, Pauline Oliveros, Pamela Z, Chantal Passamonte (Mira Calix), Maggi Payne, Eliane Radigue, Jessica Rylan, Carla Scaletti, Laetitia Sonami, Bev Stanton (Arthur Loves Plastic), Keiko Uenishi (o.blaat)

The Creative Electronic Music Producer Thomas

Brett, 2021-07-01 The Creative Electronic Music Producer examines the creative processes of electronic music production, from idea discovery and perception to the power of improvising, editing, effects processing, and sound design. Featuring case studies from across the globe on musical systems and workflows used in the production process, this book highlights how to pursue creative breakthroughs through exploration, trial and error tinkering, recombination, and transformation. The Creative Electronic Music Producer maps production's enchanting pathways in a way that will fascinate and inspire students of electronic music production, professionals already working in the industry, and hobbyists.

The Theory and Technique of Electronic Music Miller

Puckette, 2007 Develops both the theory and the practice of synthesizing musical sounds using computers. This work contains chapters that starts with a theoretical description of one technique or problem area and ends with a series of working examples, covering a range of applications. It is also suitable for computer music researchers.

Live Wires Dan Warner, 2017-10-15 We live in an electronic world, saturated with electronic sounds. Yet, electronic sounds aren't a new phenomenon; they have long permeated our sonic landscape. What began as the otherworldly sounds of the film score for the 1956 film Forbidden Planet and the rarefied, new

timbres of Stockhausen's *Kontakte* a few years later, is now a common soundscape in technology, media, and an array of musical genres and subgenres. More people than ever before can produce and listen to electronic music, from isolated experimenters, classical and jazz musicians, to rock musicians, sound recordists, and the newer generations of electronic musicians making hip-hop, house, techno, and ambient music. Increasingly we are listening to electronic sounds, finding new meanings in them, experimenting with them, and rehearing them as listeners and makers. *Live Wires* explores how five key electronic technologies—the tape recorder, circuit, computer, microphone, and turntable—revolutionized musical thought. Featuring the work of major figures in electronic music—including everyone from Schaeffer, Varèse, Xenakis, Babbitt, and Oliveros to Eno, Keith Emerson, Grandmaster Flash, Juan Atkins, and Holly Herndon—*Live Wires* is an arresting discussion of the powerful musical ideas that are being recycled, rethought, and remixed by the most interesting electronic composers and musicians today.

Electronic Music School Will Kuhn, Ethan Hein, 2021 This book is a practical blueprint for teachers wanting to begin teaching project-based music technology, production and songwriting to secondary and college-age students. We hope to inspire teachers to expand beyond the usual ensemble offerings to create a culture of unique creativity at their school. The book will primarily draw upon the authors' experiences developing and implementing the music technology program at Lebanon High School, one of the nation's largest secondary-level programs, and courses at New York University and Montclair State University. While the lesson templates can be used with any hardware and software setup, the book uses the popular digital audio workstation Ableton Live for specific examples and screenshots--

The Evolution of Electronic Music David Ernst, 1977

Live Electronic Music Friedemann Sallis, Valentina Bertolani, Jan Burle, Laura Zattra, 2017-11-20 During the twentieth century,

electronic technology enabled the explosive development of new tools for the production, performance, dissemination and conservation of music. The era of the mechanical reproduction of music has, rather ironically, opened up new perspectives, which have contributed to the revitalisation of the performer's role and the concept of music as performance. This book examines questions related to music that cannot be set in conventional notation, reporting and reflecting on current research and creative practice primarily in live electronic music. It studies compositions for which the musical text is problematic, that is, non-existent, incomplete, insufficiently precise or transmitted in a nontraditional format. Thus, at the core of this project is an absence. The objects of study lack a reliably precise graphical representation of the work as the composer or the composer/performer conceived or imagined it. How do we compose, perform and study music that cannot be set in conventional notation? The authors of this book examine this problem from the complementary perspectives of the composer, the performer, the musical assistant, the audio engineer, the computer scientist and the musicologist.

Performing Electronic Music Live Kirsten Hermes, 2021-12-28
Performing Electronic Music Live lays out conceptual approaches, tools, and techniques for electronic music performance, from DJing, DAWs, MIDI controllers, traditional instruments, live sound design, hardware setups, custom software and hardware, to live visuals, venue acoustics, and live show promotion. Through case studies and contrasting tutorials by successful artists, Kirsten Hermes explores the many different ways in which you can create memorable experiences on stage. Featuring interviews with highly accomplished musicians and practitioners, readers can also expand on their knowledge with hands-on video tutorials for each chapter via the companion website, performingelectronicmusic.live. Performing Electronic Music Live is an essential, all-encompassing resource for professionals, students of music production courses, and researchers in the field of

creative-focused performance technology.
