Introduction to Mobile Communications: Technology, Services, Markets Tony Wakefield, Dave McNally, David Bowler, Alan Mayne, 2007-04-19 The traditionally separate Fixed, Mobile, and Internet sectors have been evolving recently toward a single sector, offering numerous implications for those involved in technology and business. It is therefore essential for telecommunication

professionals to get a keen grasp of where the industry is heading. Providing a solid foundation in the industry, *Introduction to Mobile Communications: Technology, Services, Markets* explores the core requirements of modern mobile telecommunications—from markets to technology. It explains how wireless systems work, how mobility is supported, the underlying infrastructure, and what interactions are needed among the different functional components. The book also examines how mobile communications are evolving in order to meet the changing needs of users. The information provided in the book comes primarily from the four core modules of the Certificate in Mobile Communications Distance Learning program run by the Informa Telecoms Academy in London. Designed by a highly experienced training development team, the program examines the complex and fascinating world of mobile communications. Designed to give a broad picture of mobile communications, the book provides an excellent grounding for those involved in both business and engineering—leaving them much better equipped to fulfill roles within their current or prospective companies

Fixed/Mobile Convergence and Beyond Richard Watson, 2008-10-09 Mobile communications users are demanding increased reliability, functionality, and accessibility; they want always on access to voice, e-mail, text, and multimedia services as they roam from home to auto to office to outdoor/indoor locations. In addition, there is an increasing demand to replace separate landline/mobile telephones with a single handset that can be used wherever its owner might be. Answering those customer needs, fixed/mobile convergence (FMC) marries the mobility provided by cellular networks with the extended connectivity provided by 802.11-based WiFi services and integrates them with landline networks using a single handset.

This book provides the theoretical and practical background necessary to successfully plan, develop, and deploy effective FMC networks. This book discusses the various 802.11 and VoIP protocols used in FMC networks, open and proprietary communications protocols, integration of FMC networks to wired telephone networks, mobilizing applications such as text messaging and video, security issues, mobile handset requirements for FMC networks, and the administration/management of FMC networks. Special attention is given to selecting appropriate components for FMC, and numerous case histories and examples from the author's experience are provided. This book is an essential tutorial and reference for any RF/wireless, communications, and networking professional who will work with the next generation of wireless networks. Describes how to develop, deploy, and manage networks that seamlessly combine landline, cellular, and WiFi networks into one converged communications network Thorough coverage of various 802.11 and voice over internet protocol (VoIP) standards and how they impact integration with cellular networks Discusses security considerations and how to successfully manage converged networks Includes numerous case histories and examples from the author's experience---this is not a purely theoretical treatment of the subject!

Emergency Communications Linda K. S. Moore, 2008 Today's 911 system is built on an infrastructure of analog technology that does not support many of the features that most Americans expect are part of an emergency response. Efforts to splice newer, digital technologies onto this aging infrastructure have created points of failure where a call can be dropped or misdirected, sometimes with tragic consequences. Callers to 911, however, generally assume

that the newer technologies they are using to place a call are matched by the same level of technology at the 911 call center. This is not the case. For example, except for some work-around solutions, Public Safety Answering Points (PSAPs) -- the call centers -- cannot receive text messages. Delays in moving calls from digital to analog mode add life-threatening seconds to the completion of a 911 call. Information about a caller's location may not be accurate, especially in the case of wireless calls. Technology to supply accurate location information for wireless calls is useless unless the systems receiving and processing the call have matching capability.

Modernizing the system to provide the quality of service that approaches the expectations of its users will require investments in new technologies. The general consensus is that these new technologies, collectively referred to as Next Generation 911 or NG9-1-1, should incorporate Internet Protocol (IP) networks and standards. An IP-based emergency communications network that supports 911 will facilitate interoperability and system resilience; improve connections between 911 call centers, emergency responders, and alert and warning systems; provide more robust capacity; and offer flexibility to receive calls for help in any format. Recognizing the importance of providing effective 911 service, Congress has passed three major bills supporting improvements in the handling of 911 emergency calls.

International Seminar on Nuclear War and Planetary Emergencies, 31st Session Richard C. Ragaini, 2004 This book contains the proceedings of the 31st International Seminar on Nuclear War and Planetary Emergencies convened in Erice, Italy, on May 7-12, 2004. World leaders in their fields of Science, directors of National Laboratories, advisors to Presidents, Defence Secretaries and high-level diplomats converged at the event. Together, they

offer different schools of thought to the widely-debated subject of Cultural Emergency and Terrorism. The subjects treated in this volume include societal and global approach to terrorism; responses to chemical, biological, radiological and nuclear threats, as well as challenges to emergency/risk management, media information and communication.
