**Value and Quality Innovations in Acute and Emergency Care** Jennifer L. Wiler, Jesse M. Pines, Michael J. Ward, 2017-03-21 Access to acute and emergency care is essential when we are ill or injured, but the costs are

significant. How can we make services more efficient and effective? This thought-provoking text provides twenty case studies detailing successful innovations to enhance value, including telehealth, observation medicine, high utilizer programs, and the use of informatics to improve clinical decision support. A detailed history of system developments over the last fifty years in the US and internationally is provided, and subjects including measurement and quality improvement, volume versus value based care, and emergency department crowding are discussed. **Evaluating Critical Care** William J. Sibbald, Julian F. Bion, 2002-01-21 Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge. Recently, consumers, clinicians, and payers have requested more formal assessments and comparisons of the quality and costs of medical care [2]. Donabedian [1] proposed a framework for thinking about the quality of medical care that separates quality into three components: structure, process, and outcome. An instructive analogy for understanding this framework is to imagine a food critic evaluating the quality of a restaurant. The critic might comment on the decoration and lighting of the restaurant, how close the tables are to each other, the extent of the wine list and where the chef trained. These are all evaluations of the restaurant structure. In addition, the critic might comment on whether the service was courteous and timely - measures of process. Finally, the critic might comment on outcomes like customer satisfaction or food poisoning. Similarly, to a health care critic, structure is the physical and human resources used to deliver medical care. Processes are the actual treatments offered to patients. Finally, outcomes are what happens to patients, for example, mortality, quality of life, and satisfaction with care (Table 1). There is a debate about which of these measurements is the most important measure of quality.

Each chapter begins with a case – or set of cases with typical and atypical aspects – of the disease in question. This is followed by high-value learning points on the condition with introductory/background points, physiology and pathophysiology of the disease, how to make the diagnosis, and finally how to initiate treatment. The cases provide expert discussion with tips and tricks, personal experience with management of each of the cases, and a follow-up description of the outcome of the cases to provide the reader with closure.
