Improving the Safety and Efficiency of Emergency Services: Emerging Tools and Technologies for First Responders Management Association, Information Resources,2020-01-03 During emergency situations, society relies upon the efficient response time and effective services of emergency facilities that include fire departments, law enforcement, search and rescue, and emergency medical services (EMS). As such, it is imperative that emergency crews are outfitted with technologies that can cut response time and can also predict where such events may occur and prevent them from happening. The safety of first responders is also of paramount concern. New tools can be implemented to map areas of vulnerability for emergency responders, and new strategies can be devised in their training to ensure that they are conditioned to respond efficiently to an emergency and also conscious of best safety protocols. Improving the Safety and Efficiency of Emergency Services: Emerging Tools and Technologies for First Responders addresses the latest tools that can support first responders in their ultimate goal: delivering their patients to safety. It also explores how new techniques and devices can support first responders in their work by addressing their safety, alerting them to accidents in real time, connecting them with medical experts to improve the chances of survival of critical patients, predicting criminal and terrorist activity, locating missing persons, and allocating resources. Highlighting a range of topics such as crisis management, medical/fire emergency warning systems, and predictive policing technologies, this publication is an ideal reference source for law enforcement, emergency professionals, medical professionals, EMTs, fire departments, government officials, policymakers, IT consultants, technology developers, academicians, researchers, and students.

Car Emergency Kit Joseph Krueger,Virginia Nicols,2020-03-20 PARTICULARLY GOOD FOR TEENAGERS OR NEW DRIVERS!If you're lucky enough to drive a nice new car, you may not think of it as being part of your emergency plan. But when disaster hits, all drivers can find themselves in trouble! What preparedness habits should all drivers develop? Review them with the latest booklet of the Emergency Preparedness Q&A Mini-Series. A Car Emergency Kit is not the same as a personal survival kit or go-bag. It is focused on the car itself and the car's role in protecting you and your family in a disaster or evacuation. Some of the questions you'll find: What should I be including when it comes to keeping my car ready for emergencies? What's the best way to get gas in an emergency? What tools should I carry in my car? In an emergency, how do I keep from getting lost? Are roadside assistance programs a good idea? As an experienced driver, most of the answers should be familiar to you. They may be brand new, however, to young drivers.All drivers will like the fast read - fewer than 50 pages - and the checklists of good ideas and recommendations. Don't overlook the safety cautions. Authors Virginia S. Nicols and Joseph A. Krueger are long-time car buffs whose background includes military training, disaster response marketing and nearly 20 years of hands-on experience with Community Emergency Response Teams (CERT). Successful Response Starts with a Map National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Mapping Science Committee, Committee on Planning for Catastrophe: A Blueprint for Improving Geospatial Data, Tools, and Infrastructure, 2007-01-19 In the past few years the United States has experienced a series of disasters, such as Hurricane Katrina in 2005, which have severely taxed and in many cases overwhelmed responding agencies. In all aspects of emergency management, geospatial data and tools have the potential to help save lives, limit damage, and reduce the costs of dealing with emergencies. Great strides have been made in the past four decades in the development of geospatial data and tools that describe locations of objects on the Earth's surface and make it possible for anyone with access to the Internet to witness the magnitude of a disaster. However, the effectiveness of any technology is as much about the human systems in which it is embedded as about the technology itself. Successful Response Starts with a Map assesses the status of the use of geospatial data, tools, and infrastructure in disaster management, and recommends ways to increase and improve their use. This book explores emergency planning and response; how geospatial data and tools are currently being used in this field; the current policies that govern their use; various issues related to data accessibility and security; training; and funding. Successful Response Starts with a Map recommends significant investments be made in training of personnel, coordination among agencies, sharing of data and tools, planning and preparedness, and the tools themselves.

Interoperable Electronic Safety Equipment Casey C Grant, 2013-07-18 Firefighters and other emergency first responders use a huge variety of highly specialized and critical technologies for personal protection. These technologies, ranging from GPS to environmental sensing to communication devices, often run on different systems with separate power supplies and operating platforms. How these technological components function in a single synergistic system is of critical interest to firefighter end-users seeking efficient tools. Interoperable ESE states that a standardized platform for electronic safety equipment (ESE) is both logical and essential. This book develops an inventory of existing and emerging electronic equipment categorized by key areas of interest to the fire service, documents equipment performance requirements relevant to interoperability, including communications and power requirements, and develops an action plan toward the development of requirements to meet the needs of emergency responders. This book is intended for practitioners as a tool for understanding interoperability concepts and the requirements of the fire service landscape. It offers clear recommendations for the future to help ensure efficiency and safety with fire protection equipment. Researchers working in a related field will also find the book valuable.

98.6 Degrees Cody Lundin, 2011-05-16 If you breathe and have a pulse, you NEED this book. -Cody Lundin Cody Lundin, director of the Aboriginal Living Skills School in Prescott, Arizona, shares his own brand of wilderness wisdom in this highly anticipated new book on commonsense, modern survival skills for the backcountry, the backyard, or the highway. It is the ultimate book on how to stay alive-based on the principal of keeping the body's core temperature at a lively 98.6 degrees. In his entertaining and informative style, Cody stresses that a human can live without food for weeks, and without water for about three days or so. But if

the body's core temperature dips much below or above the 98.6 degree mark, a person can literally die within hours. It is a concept that many don't take seriously or even consider, but knowing what to do to maintain a safe core temperature when lost in a blizzard or in the desert could save your life. Lundin delivers the message with wit, rebellious humor, and plenty of backcountry expertise. Cody Lundin and his Aboriginal Living Skills School have been featured in dozens of national and international media sources, including Dateline NBC, CBS News, USA Today, The Donny and Marie Show, and CBC Radio One in Canada, as well as on the cover of Backpacker magazine. When not teaching for his own school, he is an adjunct faculty member at Yavapai College and a faculty member at the Ecosa Institute. Cody is the only person in Arizona licensed to catch fish with his hands, and lives in a passive solar earth home sixty miles from Prescott, Arizona.
