The Nile Henri J. Dumont,2009-05-06 What have we learnt about the Nile since the mid-1970s, the moment when Julian Rzóska decided that the time had come to publish a comprehensive volume about the biology, and the geological and cultural history of that great river? And what changes have meanwhile occurred in the basin? The human population has more than doubled, especially in Egypt, but also in East Africa. Locally, industrial development has taken place, and the Aswan High Dam was clearly not the last major infrastructure work that was carried out. More dams have been built, and

some water diversions, like the Toshka lakes, have created new expanses of water in the middle of the Sahara desert. What are the effects of all this on the ecology and economy of the Basin? That is what the present book sets out to explore, 33 years after the publication of “The Nile: Biology of an Ancient River”. Thirty-seven authors have taken up the challenge, and have written the “new” book. They come from 13 different countries, and 15 among them represent the largest Nilotic states (Egypt, Sudan, Ethiopia, Uganda, and Kenya). Julian Rzesutski died in 1984, and most of the authors of his book have now either disappeared or retired from research. Only Jack Talling and Samir Ghabbour were still available to participate again.

The Wellsprings of Music Curt Sachs,2012-12-06 Typical mild Sachsonian humor and illustrated

with a wealth of examples and evidence. I doubt whether any other of us ethnomusicologists would have been capable of writing such a comprehensive study: Sachs had at his fingertips a phenomenal amount of factual information. Sometimes, under his wise guidance, complicated propositions become surprisingly simple. The reader will be as fascinated as I was by the originality of some of his conclusions, captivated by his penetrating comparisons, and charmed by his rich and expressive language. After having lived with this book for a period of some months, I realize all the more what the death of Curt Sachs means to the musicological world. The Wellsprings of Music forms a worthy close to that long series of publications his boundless energy and unsurpassed knowledge have given us. I feel greatly indebted to Dr. Eric Werner, New York, for his decisive encouragement towards the publication of this work and for the active interest he took in it. I want also to express my gratitude to the musicologist Miss Marijke Charbon, The Hague, for having made an Index of Names and for some useful suggestions. Amsterdam, 15th February 1960 JAAP KUNST My dear friend Jaap Kunst did not live to see this book in print. I wish to express my deep gratitude to him, whose dedicated help and unflinching and devoted interest made its publication possible.

Dams and Disease William Jobin, 2003-09-02 A guide to help planners and engineers to the improvement of future water projects. The past century of global experience on water projects is presented as the basis for creating new approaches. First-hand analyses, including 35 case studies from 25 countries, portray the influence of politicians, biologists, engineers, computer models and physicians on the spectacular successes and failures of the builders of canals and dams. By drawing on this experience, the author outlines methods for assessing, predicting and preventing major water-associated diseases around large dams, canals and irrigation systems.

The Ecology of River Systems Bryan R. Davies, Keith F. Walker, 2013-03-09 Our understanding of the ecology of running waters has come a long way during the past few years. From being a largely descriptive subject, with a few under tones concerned with such things as fisheries, pollution or control of blackflies, it has evolved into a discipline with hypotheses, such as the River Continuum Concept (Vannote et al. 1980), and even a book suggesting that it offers opportunity for the testing of ecological theory (Barnes & Minshall 1983). However, perusal of the literature reveals that, although some of the very early studies were concerned with large rivers (references in Hynes 1970), the great mass of the work that has been done on running water has been on streams and small rivers, and information on larger rivers is either on such limited topics as fisheries or plankton, scattered among the journals, or not available to the general limnologist. The only exceptions are a few books in this series of publications, such as those on the Nile (Rz6ska 1976), the Volga (Morduckai Boltovskoi 1979) and the Amazon {Sioli 1984), and the recent compendium by Whitton (1984) on European rivers, among which there are a few that rate as large.

Place Brand Formation and Local Identities Staci M. Zavattaro, 2019-07-16 This innovative book explores micro-level neighborhood branding and the creation of distinct local identities in neighborhoods. It begins by situating place branding literature at the neighborhood level and then gives consideration to what the core components of a neighborhood brand might be. It does so by drawing on extensive interviews with key actors in the United States, such as government officials, Realtors, economic development professionals, urban planners, and neighborhood residents. Core topics such as belonging and community, identity, nostalgia, idealism, and recreation are explored. The book concludes with a proposed working definition of neighborhood brands and branding that

stakeholders can use to promote and market their neighborhoods accordingly - or avoid branding them entirely. This book offers a novel contribution to place branding and destination management literature by moving beyond the dominant macro-level narratives. It will be of interest to scholars and students studying in urban planning, tourism, destination branding, marketing, public administration and policy, and sociology. t macro-level narratives. It will be of interest to scholars and students studying in urban planning, tourism, destination branding, marketing, public administration and policy, and sociology.
