9 to 5 Edward Balkovich,Tora K. Bikson,Gordon Bitko,2005-02-28 Describes a case study of six enterprises that use Radio Frequency Identification (RFID) tags to control access in the workplace to understand their policies about personally identifiable records obtained by sensing RFID-based access cards. These policies have a number of common features, but the policies are neither documented nor shared with employees. Analyzing Employee Portal Success Nils Urbach,2012-02 Many companies utilize employee portals to improve their information exchange, communication, and employee collaboration, as well as to better support their business processes. Owing to limited IT budgets and the need to justify investments into employee portals, assessing the benefits of these is an important field in research and practice. The overall purpose of this study is therefore to gain a better understanding of employee portal success. As a starting point, existing research on information systems success was analyzed. Subsequently, a theoretical model was developed which captures the different determinants of employee portal success and their interrelations. After the foundations of structural equation modeling using partial least squares had been outlined, the proposed model was empirically tested, using survey data collected within a benchmarking study. Complementary to the causal analysis, the improvement potentials of the success dimensions were further investigated within a performance-based analysis. Overall, this book addresses a number of research questions in the area of employee portal success and contributes to a deeper understanding of that field.

The Intranet Portal Guide David Viney,2005-07 An intranet portal project may well be the first and last project in your organisation that truly touches everyone, from the office of your CEO to the newest recruit. It may well be the most significant investment that you ever make in your people, their processes and their systems and has the power and potential to transform your organisation. However, it can be a tough project to deliver, bringing great exposure to its participants. All your customers will be only a small march away down the corridor and will all know where you live! Considering the \$1.5 billion market for intranet portal technology worldwide, there are surprisingly few books on the topic (and those typically either very technical or very theoretical). The Intranet Portal Guide is a deliberately practical handbook for the stressed middle manager, seeking to make things happen in their organisation. The book is divided into three sections (before, during and after) and 31 chapters, addressing everything from the key issue of how to make the business case through to ongoing performance enhancement and benefit realisation. It is packed full of tools, templates, plans and processes for successful delivery - based on real life experience of implementation at two major UK companies.

These organizations have an opportunity to fully embrace this new mobile technology for many types of transactions, including everything from exchanging information to exchanging goods and services, from employee self-service to customer service.
