*Acromegaly* Richard J. Robbins,2012-12-06 The manuscripts in this volume were contributed by the speakers invited to the Acromegaly Centennial Symposium held in San Francisco, California in July 1986. The meeting was organized to commemorate the description of acromegaly by the French physician Pierre Marie, in 1886. The members of the Scientific Committee spent many hours assisting us in ensuring an outstanding meeting. The support of Serono Symposia, USA in all phases of the planning and execution of the meeting was sincerely appreciated and was highly professional. Special recognition must be extended to Professor Roger Guillemin of the Salk Institute, whose interest in medical history led him to devote a great deal of time and personal expense in obtaining information about the life of Pierre Marie. Dr. Guillemin's presentation on the life and times of Marie was an extraordinary overview of the cultural, social, and scientific backgrounds in which Marie came to describe the disease, acromegaly. Dr. Guillemin's findings, which were presented at the main banquet in a splendid audiovisual presentation, were clearly the highlight of the meeting and will long be remembered by the attendees. We were also honored by the presence of Dr. Martine Pierre Marie Granier, the great-granddaughter of Pierre Marie. In her address at the banquet, Dr. Granier provided several delightful and intimate vignettes concerning Pierre Marie, using old family records and photographs. The Scientific Committee wishes to extend its gratitude to Dr. Granier for adding immeasurably to the historical atmosphere of the meeting.

Adverse Effects of Vaccines Institute of Medicine,Board on Population Health and Public Health Practice,Committee to Review Adverse Effects of Vaccines,2012-04-26 In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. Adverse Effects of Vaccines

reviews the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. Adverse Effects of Vaccines will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.

**Chronobiotechnology and Chronobiological Engineering** L.E. Scheving, Franz Halberg, Charles F. Ehret, 2012-12-06 High blood pressure (BP) (with fats and smoking) is one of the three roots of cardio-cerebro-renal-vascular disease affecting up to 25% of the adult population. Hence, high blood pressure should be recognized and treated, to reduce any complications and prolong life, as noted by Michael Weber of the Veterans Administration Hospital in Long Beach, California. He further emphasizes the need for monitoring before one starts the treatment of high blood pressure. Indeed, he refers to the results of the Australian study on mild hypertension with a large percentage of placebo responders and rightly suggests that many people are treated who should not be because of 'white-coat-associated high blood pressure'. He also points to the lack of standardization of techniques for data analysis and of methods of BP measurement. Ambulatory monitoring under usual conditions without concomitant recording of events does not allow even a qualitative assessment of the impact of varying stimuli, in Weber's opinion.

**Antibiotic Resistance** Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2011-01-10 Years of using, misusing, and overusing antibiotics and other antimicrobial drugs has led to the emergence of multidrug-resistant 'superbugs.' The IOM's Forum on Microbial Threats held a public workshop April 6-7 to discuss the nature and sources of drug-resistant pathogens, the implications for global health, and the strategies to lessen the current and future impact of these superbugs.

**Light Pollution as a New Risk Factor for Human Breast and Prostate Cancers** Abraham Haim,Boris

A. Portnov,2013-06-03 Humans are diurnal organisms whose biological clock and temporal organization depend on natural light/dark cycles. Changes in the photoperiod are a signal for seasonal acclimatization of physiological and immune systems as well as behavioral patterns. The invention of electrical light bulbs created more opportunities for work and leisure. However, exposure to artificial light at night (LAN) affects our biological clock, and suppresses pineal melatonin (MLT) production. Among its other properties, MLT is an antioncogenic agent, and therefore its suppression increases the risks of developing breast and prostate cancers (BC&PC). To the best of our knowledge, this book is the first to address the linkage between light pollution and BC&PC in humans. It explains several state-of-the-art theories, linking light pollution with BC&PC. It also illustrates research hypotheses about health effects of light pollution using the results of animal models and population-based studies.

**Neuroscience** Dale Purves,2004-01-01 Neuroscience is a comprehensive textbook created primarily for medical and premedical students; it emphasises the structure of the nervous system, the correlation of structure and function, and the structure/function relationships particularly pertinent to the practice of medicine. Although not primarily about pathology, the book includes the basis of a variety of neurological disorders. It could serve equally well as a text for undergraduate neuroscience courses in which many of the students are premeds. Being both comprehensive and authoritative, it is also appropriate for graduate and professional use. The new edition offers a host of new features including a new art program and the completely revised Sylvius for Neuroscience: Visual Glossary of Human Neuroanatomy, an interactive CD-ROM reference guide to the human nervous system. Major changes to the new edition also include: additional neuroanatomical content, including two appendices-(1) The Brainstem and Cranial Nerves and (2) Vascular Supply, the Meninges, and the Ventricular System; and updated and new boxes on neurological and psychiatric diseases.

**Acute Heart Failure** C. Perret,Jean-Louis Vincent,1988-12-09 This book presents a comprehensive survey of acute heart failure. A series of experts recognized worldwide discuss specific topics so that, together, a wide spectrum of experimental and clinical investigations are covered. Pathophysiologic, diagnostic and therapeutic aspects are included. The present volume will help clinicians deal with the

important problem of acute heart failure. It will help provide an up-to-date reference for those involved in cardiology, internal medicine, pediatrics, anesthesia, intensive care and emergency medicine.

**Stress and Human Performance** James E. Driskell,Eduardo Salas,2013-05-13 The pace of life in our high technology world has quickened. Industries that do not become more efficient, often by requiring a faster production turnaround with less slack, are superseded. Because of this, workers face an environment in which they must perform under more time pressure and under greater task load, in which stress is more prevalent, and in which consequences of poor performance are more critical than ever before. The dominant, if unstated, psychoanalytic paradigm underlying much stress research over the past fifty years has led to an emphasis on coping and defense mechanisms and to a preoccupation with disordered behavior and illness. Accordingly, almost any book with stress in the title will invariably devote a considerable amount of pages to topics such as stress-related disorders, clinical interventions, stress and coping, psychopathology, illness, and health issues. This book presents basic and applied research that addresses the effects of acute stress on performance. There are a large number of applied settings that share the commonalities of high demand, high risk performance conditions, including aviation; military operations; nuclear, chemical, and other industrial settings; emergency medicine; mining; firefighting; and police work, as well as everyday settings in which individuals face stressors such as noise, time pressure, and high task load. This book focuses directly on the effects of acute stress-- defined as intense, novel stress of limited duration--on performance. The effects of stress on task performance, decision making, and team interaction are discussed, as well as the interventions used to overcome them.

**Vaccines: Are they Worth a Shot?** Andrea Grignolio,2018-07-13 The dangerous decline in vaccinations in many developed countries is at the heart of a lively debate that confirms how important the subject is today. Vaccinations are among mankind's most important scientific discoveries, yet they continue to be viewed with suspicion by part of the public – the victims of disinformation campaigns, instrumentalization and unfounded fears. There is, however, also an evolutionary explanation for these irrational beliefs, and countering the growing social opposition will be extremely difficult without

grasping it. This book, which sheds new light on the safety and importance of vaccinations, is intended both for parents and those readers who want to understand the role of vaccinations in contemporary society, where the ease of access to knowledge is both a great opportunity and a great responsibility. The chapters follow a historical progression and conclude with a discussion of the most recent cognitive theories on how to overcome this opposition to vaccinations.

**A Cultural History of Marriage in the Age of Empires** Paul Puschmann, 2021-11-18 During the age of empires (1800–1900), marriage was a key transition in the life course worldwide, a rite of passage everywhere with major cultural significance. This volume presents an overview of the period with essays on Courtship and Ritual; Religion, State and Law; Kinship and Social Networks; the Family Economy; Love and Sex; the Breaking of Vows; and Representations of Marriage. Using this framework, this volume explores global trends in marriage. In nineteenth-century Western Europe, marriage was increasingly regarded as the only way to reach happiness and self-fulfilment. In the United States former slaves obtained the right to marry, leading to a convergence in marriage patterns between the black and white populations. In Latin America, marriage remained less common, but marriage rates were nevertheless on the rise. In African and Asian societies, European colonial powers tried to change indigenous marriage customs like polygamy and arranged marriages, but had limited success. Across the globe, in a time of turbulent political and economic change, marriage and the family remained crucial institutions, the linchpins of society that they had been for centuries.
