Mobile Integrated Healthcare MedStar Mobile Healthcare, 2014-08-15 The healthcare landscape in the United States is evolving rapidly but has largely ignored EMS, until recently. As the country focuses on cost containment and more appropriate methods to deliver services as a result of healthcare reform, EMS will need to undergo dramatic change to fill a new role in the healthcare system. The current traditional delivery method for EMS is financially unsustainable and will soon not be a viable option for care. EMS has a choice to make--adapt to the new environment or be left behind. A viable alternative to the current structure of EMS is Mobile Integrated Healthcare (MIH)--community-based health management that is fully integrated with the overall health system. Various programs like this have appeared across the United States, but a definitive resource that describes how to successfully implement such a program has not been available. *Mobile Integrated Healthcare: Approach to Implementation* fills this void by serving as a reference not only to the EMS community, but also to other medical professionals working toward implementation of a successful MIH program. *Mobile Integrated Healthcare: Approach to Implementation* provides a step-by-step approach for the identification of community needs, forming the appropriate partnerships, selection of staff, acquiring resources, patient identification, and overcoming hurdles to a successful program. Examples from successful programs across the country are included. The author team of *Mobile Integrated Healthcare: Approach to Implementation* has developed and implemented a functioning, successful program. Their experiences with community partners and other healthcare specialists provide a broad-based view of the future of EMS in the healthcare industry. *Mobile Integrated Healthcare: Approach to Implementation* is written by leaders in the field of EMS who are committed to guiding the successful evolution of EMS. Their approach to integration should be considered by EMS management, hospital-based social workers, and community partners such as county health authorities, homeless coalitions, and psychiatric services. The type of care EMS providers give needs to evolve with the changing landscape of healthcare. This text describes how healthcare professionals and community partners can work together to facilitate that change and define a successful MIH program.

Disasters 2.0 Adam Crowe, 2012-04-10 Emerging social media and so-called Web 2.0 technologies will continue to have a great impact on the practice and application of the emergency management function in every public safety sector. *Disasters 2.0: The Application of Social Media Systems for Modern Emergency Management* prepares emergency managers and first responders to successfully apply social media principles in the operations, logistics, planning, finance, and administrative aspects of any given disaster. Using real-life examples of domestic and international disasters, the book reveals how social media has quickly become a powerful tool for both providing emergency instruction to the public in real time and allowing responding agencies to communicate among themselves in crisis. A definitive and comprehensive source, the book explores topics such as: Social media basics Citizen journalism Strategic implementation Safety and responsibility Monitoring and analytics Operational implementation Geolocation systems Crowdsourcing Public notification Mobile and other emerging technologies Each chapter begins with a list of objectives and includes a collection of case examples of social media use in past events. Practitioner profiles show real people implementing the technology for real solutions. Demonstrating how to effectively apply social media technology to the next crisis, this is a must-read book for those charged with disaster management and response.

Crisis Standards of Care Institute of Medicine, Board on Health Sciences Policy, Committee on Guidance for Establishing Standards of Care for Use in Disaster Situations, 2012-08-26 Catastrophic disasters occurring in 2011 in the United States and worldwide--from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand--have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations--both naturally occurring and man-made--under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement--state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. *Crisis Standards*

of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.
